902 ill **Semiconductor Design and Implementation Issues in Integrated Vehicle Electronics** John H. Hall, 2005
This major research study provides a fresh critical look at the way automobile electronics are and should be built Written by
Silicon Valley pioneer John Hall this book is based on his nearly 40 years of experience in developing and producing
semiconductors for the automobile industry and other customers Highly readable and comprehensible for even beginning
students of electronics and semiconductor design this volume provides an in depth explanation of the factors to be
considered when building vehicle systems Starting with a concise history of vehicle electronics Hall walks the reader through
the environmental conditions faced by these systems and the variety of failure mechanisms that can occur Basic and
advanced semiconductor issues raised by vehicle implementation are then discussed in detail A wide range of issues
confronting designers from over marketing of risky features to time and cost constraints are explained Complex electronic
modules from many different manufacturers are examined and discussed as real world case studies of good and bad design
techniques Hall concludes by providing design recommendations that will allow vehicle electronics system developers to
build much tougher devices at little or no incremental production cost This book is the first major work to focus on key issues
emerging as major causes of safety and performance problems Vehicle makers increasingly seek market advantages by
providing ever more capable electronics in their products While these features add much value to vehicles they fail in ways
that are beyond the experience and comprehension of most technicians and accident investigators By combining decades of
design experience and innovation with extensive research Hall has produced unique insights and explanations so engineers
can prevent most or perhaps all of these problems John Hall is one of Silicon Valley s most prolific independent pioneers and
inventors He founded Union Carbide s semi conductor operation in 1962 He is a founder of Interstil and Micro Power
Systems He is the inventor of the first electronic watch first LCD digital watch first CMOS liquid crystal display hand held
calculator color autofocus cameras among many successful commercial products He has worked for many American and
foreign automakers on specific projects such as integrated two way radios and seat belt interlocks He is working with DoD on
hardening electronics systems against non nuclear events *Chilton's Ford Bronco Ii/Explorer/Ranger 1983-94 Repair*
