Chinese Culture: Its Humanity And Modernity Suoqiao Qian, 2020-12-15 Understanding China and the Chinese is of

paramount importance in today's world. With China's rapid economic growth and increasing political influence, there has been significant interest in learning the Chinese language around the world. While we constantly hear about China in political and economic terms, we rarely come across a book that explains what Chinese culture or a Chinese person is like today. This book offers a critical overview of Chinese culture intended for college students as well as for general readers interested in the topic. While Chinese culture is often deployed in terms of kung fu, Confucius, or calligraphy, this book refers to the traditional and modern experiences out of which contemporary Chinese people have grown. Internationally renowned scholar in China Studies Professor Qian Suoqiao invites readers to join him on an exciting intellectual journey to critically explore important issues including history, language, governmentality, self-cultivation, aesthetics of life, nationalism, cosmopolitanism, communism, the rise of China, and her soft power, which contribute to the formation of what we call Chinese.

Transdisciplinary Engineering: A Paradigm Shift C.-H. Chen, A.C. Trappey, M. Peruzzini, 2017-07-20. Concurrent Engineering is based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). Its main goal is to increase the efficiency and effectiveness of the PCP and reduce errors in the later stages and to incorporate considerations for the full lifecycle through life operations and environmental issues of the product. It has become the substantive basic methodology in many industries, and the initial basic concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches, and tools. This book presents the proceedings of the 24th ISPE Inc. International Conference on Transdisciplinary, formerly Concurrent Engineering, TE 2017, held in Singapore in July 2017. The 120 peer-reviewed papers in the book are divided into 16 sections: air transport and traffic operations and management, risk-aware supply chain intelligence, product innovation and marketing management, human factors in design, human engineering, design methods and tools, decision supporting tools and methods, concurrent engineering, knowledge-based engineering, collaborative engineering, engineering for sustainability, service design, digital manufacturing, design automation, artificial intelligence and data analytics, smart systems, and the Internet of Things. The book provides a comprehensive overview of recent advances in transdisciplinary concurrent engineering research and applications and will be of interest to researchers, design practitioners, and educators working in the field.
