Hirschfeld, Susan A. Gelman, 1994-04-29 A collection of essays introducing the reader to domain specificity **Exploring the Domain Specificity of Creativity in Children** Ahmed Mohamed, C. June Maker, Todd Lubart, 2012 In this study we explored whether creativity was domain specific or domain general The relationships between students scores on three creative problem solving activities math spatial artistic and oral linguistic in the DISCOVER assessment Discovering Intellectual Strengths and Capabilities While Observing Varied Ethnic Responses and the TCT DP Test of Creative Thinking Drawing Production a non verbal general measure of creativity were examined The participants were 135 first and second graders from two schools in the Southwestern United States from linguistically and culturally diverse backgrounds Pearson correlations canonical correlations and multiple regression analyses were calculated to describe the relationship between the TCT DP and the three DISCOVER creative problem solving activities We found that creativity has both domain specific and domain general aspects but that the domain specific component seemed more prominent One implication of these results is that educators should consider assessing creativity in specific domains to place students in special programs for gifted students rather than relying only on domain general measures of divergent thinking or creativity *Creativity and Divergent Thinking* John Baer, 2014-01-09 Do general purpose creative thinking skills skills like divergent thinking which is touted as an important component of creative thinking no matter what the task domain actually make much of a contribution to creative performance Although much recent research argues against such domain transcending skills including several new studies reported in this book the appeal of such general skills remains strong probably because of the theoretical economy and power such skills would provide Divergent thinking in particular has had an incredible staying power Despite its many flaws divergent thinking remains the most frequently used indicator of creativity in both creativity research and educational practice and divergent thinking theory has a strong hold on everyday conceptions of what it means to be creative Reviewing the available research on divergent thinking this book presents a framework for understanding other major theories of creativity including Mednick s associative theory and a possible connectionist approach of creativity It reports a series of studies including the study that won APA s 1992 Berlyne Prize that demonstrate the absence of effects of general creative thinking skills across a range of creativity relevant tasks but indicate that training in divergent thinking does in fact improve creative performance across diverse task domains The book then ties these findings together with a multi level theory in which a task specific approach to creativity is

strengthened by recasting some divergent thinking concepts into domain and task specific forms This book fills the gap between divergent thinking theory and more recent modular conceptions of creativity Rather than advocate that we simply discard divergent thinking an approach that hasn't worked or at least hasn't happened because of many attacks on its validity and usefulness this book shows how to separate what is useful in divergent thinking theory and practice from what is not It shows that divergent thinking training can be valuable although often not for the reasons trainers think it works And it offers specific suggestions about the kinds of creativity research most needed today

Multidisciplinary Contributions to the Science of Creative Thinking Giovanni Emanuele Corazza, Sergio Agnoli, 2015-07-30 This book offers a multidisciplinary and multi domain approach to the most recent research results in the field of creative thinking and creativity authored by renowned international experts By presenting contributions from different scientific and artistic domains the book offers a comprehensive description of the state of the art on creativity research Specifically the chapters are organized into four parts 1 Theoretical Aspects of Creativity 2 Social Aspects of Creativity 3 Creativity in Design and Engineering 4 Creativity in Art and Science In this way the book becomes a necessary platform for generative dialogue between disciplines that are typically divided by separating walls

Creativity Or Creativities Zorana Ivcevic, 2005

There's No Such Thing as Creativity John Baer, 2022-07-07 Most people including creativity researchers act as if they believe that creativity is not simply a useful category or label but a real thing with its own essence just as Plato would argue that an ideal triangle has an essence that is shared with all actual triangles Most people including creativity researchers also believe that there is a set of general creativity relevant skills that can be applied to most problems in ways that will lead to more creative outcomes Creativity research now calls these beliefs into question A domain general misunderstanding of the nature of creativity relevant skills and the equally mistaken belief that creativity exists independently of actual creative things and ideas have together hindered creativity theory research assessment and training A more domain specific and nominalist understanding of creativity will free creativity researchers to make progress in areas where it is currently stymied

Handbook of Research Methods on Creativity Viktor Dörfler, Marc Stierand, 2020-07-31 This Handbook offers an insightful journey through the landscape of research methods used to study the phenomenon of creativity Offering a methodological panorama for the global community of creativity researchers contributors provide markers and waypoints to better orient scholars and encourage reflection on how one might produce exceptional research on the burgeoning field of creativity

Expanding Visions of Creative Intelligence Donald Ambrose, 2009 Provides a wide ranging exploration of theories research findings and philosophical perspectives that can expand thinking about the nature of creative intelligence and the purposes of education In an effort to expand and clarify the conceptual foundations for the fields of gifted education general education and creative studies the book provides synopses of 87 groundbreaking insights from 29 academic fields together with connections between these insights and creative intelligence

Creativity, Altered States of Consciousness and Anomalous Cognition N. Holt, 2007 In this PhD research a question is posed that concerns varieties of creativity that have infrequently been explored empirically although often described anecdotally This question being is and if so how is creativity related to altered states of consciousness ASCs and parapsychological experiences This thesis systematically explores the relationship between multiple dimensions of creativity and personality traits characterised by an openness to intrapersonal experience and a fluid cognitive style specific altered states of consciousness and anomalous experiences such as mystical experiences and subjective paranormal experiences and anomalous cognition The common thread is conceived as an examination of the extent to which creativity might involve epistemological flexibility that is involves shifts into and between different ways of knowing As such a major part of this thesis was the psychometric development of a new self report instrument the Creative Cognition Inventory which measures the reported use of different epistemological resources such as intuition dreams and rational logic in the creative process Creativity is defined in terms of a process participated in at the person level which leads to a novel and adaptive product or performance Drawing upon models of the creative process and person it is suggested that a biphasic process is common to most theories of creativity and that individuals with particular traits have been hypothesised to engage in this with more facility Models that have explored cognitive affective and perceptual looseness as facilitating novelty are examined As altered states of consciousness involve subjective shifts in these same dimensions it is proposed that creativity and ASCs may be experientially related either directly or in terms of an overarching trait such as boundary thinness or transliminality which propitiates both A multi dimensional approach was taken to creativity measurement accepting its complexity as a componential construct that might consist of multiple creativities In Study One the benefits of a multidimensional approach to creativity measurement were evident refuting earlier work that had used only cognitive estimates of creativity and found no relationship with either boundary thinness or transliminality These constructs are experiential traits that assess ones degree of intrapersonal openness cognitive fluidity and sensitivity and are associated with a proclivity to have unusual experiences In Study One they were found to be significantly correlated with both domain general measures of creativity creative personality and domain specific measures emotional creativity and involvement in the arts The sample for Study One consisted of 65 psychology undergraduates 49 females 16 males A second study assessed the degree to which different dimensions of creativity were related to different experiences of consciousness 211 participants were recruited from the general population through opportunity sampling 108 females 101 males The sample included professional artists n 36 and scientists n 27 Competing models of a relationship between creativity and ASC proclivity were assessed cognitive expansion affective openness and motivational impetus This study provided numerous insights into the experiences of consciousness that might be related to varieties of creativity The key findings were that emotional creativity was most robustly associated with ASCs artistic creative personality was associated with positive ASCs including those along an oneiric continuum e g

hypnagogia and hallucinations and those along an affective expansion continuum e.g. dissociation and positive mystical experiences. Further, original and flexible cognition appeared to be associated with states along an oneiric continuum. Thus, Study Two found support for the affective and cognitive models yet within different ranges of experience. This model helps to clarify by using heterogeneous rather than homogenous constructs of unusual experiences specific processes by which ASCs and creativity may be related and as such deserves further exploration. The final piece of research developed a novel protocol for recording impressions thought by participants to involve extrasensory perception (ESP) and associated states of consciousness in daily life using experience sampling methodology. As success in ESP experiments has consistently been reported amongst visual artists, the above models were used to explore what aspects of the creativity complex might be associated with ESP performance. As only emotional creativity related to the reporting of parapsychological experiences in Study Two, the affective openness model was expected to predict ESP performance. Further, a carefully matched control group (n = 15) was used against which to compare success of artists (n = 15). Artists did not demonstrate a superior ESP effect in this study although they did perform at a level commensurate with previous research. The affective openness hypothesis for ESP performance was rejected. Rather, it was questioned whether previous studies had not adequately matched controls or that the take-home methodology perhaps increasing relaxation and control for the participants increased performance levels for the non-artists.
