Bioenergy from Dendromass for the Sustainable Development of Rural Areas David Butler Manning, Albrecht

Bemmann, Michael Bredemeier, Norbert Lamersdorf, Christian Ammer, 2015-08-17 Based on the results of two bioenergy research initiatives in Germany this reference examines the sustainable management of wood biomass in rural areas The large number of participating organizations and research institutes ensures a balanced and unbiased view on the potentials and risks is presented taking into account economic ecological and social aspects Most of the results reported are available here for the first time in English and have been collated in central Europe but are equally applicable to other temperate regions They highlight best practices for enhancing dendromass potential and productivity while discussing the implications on rural economies and ecosystems

**Bioenergy and Water** J. F. Dallemand, P. W. Gerbens-Leenes, 2013 Bioenergy is the production of renewable energy from organic material It corresponds to three main feedstock categories agriculture forestry waste for three main uses transport heat electricity The development of bioenergy is often retained as a positive option due to its contribution to the mitigation of climate change agricultural and rural development energy security innovation policies Nevertheless concerns have been raised during the last few years about risks or bad practices sometimes evolving into large scale controversy especially in relation to GHG emissions The need to ensure that bioenergy development will be based on sustainable water management is essential taking into account the need to increase food production and to accommodate simultaneously other uses of water resources both for quantity quality This publication thus contains data and information related to methodologies of impact assessment practical case studies scenario analysis discussion of sustainability certification schemes all focusing on bioenergy water This publication has been prepared as a follow up of the Session on Bioenergy Water of the Sixth World Water Forum Marseille 2012 This document was prepared by the Joint Research Centre of the European Commission with the support of the Twente University Netherlands and of the International Energy Agency Bioenergy Task 43 Biomass Feedstock for Energy Markets This Report is based on scientific contributions from Argentina Australia Brazil the European Commission France Germany India the International Energy Agency Netherlands South Africa Sweden and the United States This document is aiming to be a useful reference for those interested in the sustainability of bioenergy and a contribution to the diffusion of good practices of water management at global national or local level

Sustainable Bioenergy Production - An Integrated Approach Hans Ruppert, Martin Kappas, Jens Ibendorf, 2013-06-19 This book focuses primarily on the advantages and implications of sustainable bioenergy production in terms of ensuring a more sustainable world despite its growing energy demands It

addresses a new concept that focuses on the interactions between different uses of agricultural land for example agriculture for food forage or energy and nature conservation and their ecological economic and societal impacts This research concept provides new insights into the competition for resources and the synergies between different land uses This book seeks to improve people s understanding of bioenergy s potentials for the future It will be of interest not only to those involved in sustainable energy but also to environmental planners agriculture and soil specialists and environmental policy makers

*Bioenergy Primer* Sivan Kartha, Eric D. Larson, 2000 There is an unmistakable link between energy and sustainable human development Approximately one third of the world s population has little or no access to modern energy services and a majority of these people live in poverty The United Nations Development Programme has initiated a Global Programme in Sustainable Energy in recognition of the fact that conventional energy strategies that rely on supply focused fossil intensive large scale approaches do not address the needs of the world s poor Bioenergy relates to energy that is derived from wood and other plant matter This publication is a product of the Global Programme and its purpose is to help countries and communities realise the potential for bioenergy to become an important contributor to sustainable energy strategies

Bioenergy for Sustainable Development and International Competitiveness Francis X. Johnson, 2012 First Published in 2012 Routledge is an imprint of Taylor Francis an informa company Sustainable Bioenergy Feedstock Production in Rural Areas of Developing Countries Jennifer Ann Harrison, University of Newcastle upon Tyne. School of Civil Engineering and Geosciences, 2011 Future Bioenergy and Sustainable Land Use Renate Schubert, 2009-12-01 Because of the major opportunities and risks associated with it and the complexity of the subject bioenergy policy has in a short time become a challenging political task for regulators and planners a task that can only be accomplished through worldwide cooperation and the creation of an international framework This book s central message is that the sustainable potential of bioenergy which can be tapped all over the world should be utilized provided that threats to sustainability are avoided In particular the use of bioenergy must not endanger food security or the goals of nature conservation and climate change mitigation

**Future Bioenergy and Sustainable Land Use** Renate Schubert, German Advisory Council on Global Change, 2009-12 Because of the major opportunities and risks associated with it and the complexity of the subject bioenergy policy has in a short time become a challenging political task for regulators and planners a task that can only be accomplished through worldwide cooperation and the creation of an international framework This book s central message is that the sustainable potential of bioenergy which can be tapped all over the world should be utilized provided that threats to sustainability are avoided In particular the use of bioenergy must not endanger food security or the goals of nature conservation and climate change mitigation *Sustainable Agriculture, Renewable Energy and Rural Development*, 2006 Renewable energy needs to be incorporated into the larger picture of sustainable agriculture and rural development if it is to serve the needs of the 3.25 billion human beings whose livelihoods and based on rural economies and ecologies For rural communities increasing

agriculture production is key to raising income generation and improving social well being but this linkage depends also upon not harming natural resources This dissertation provides an overview of recent Chinese agriculture history discusses the role of energy in contemporary s China s agriculture and rural development and introduces a new approach the integrated agricultural bio energy IAB system to address the challenge of sustainable agriculture and rural development IAB is an innovative design and offers a renewable energy solution for improving agricultural productivity realizing efficient resource management and enhancing social well being for rural development In order to understand how the IAB system can help to achieve sustainable agricultural and rural development in China a comprehensive evaluation methodology is developed from health ecological energy and economic HE 3 perspectives With data from surveys of 200 small farm households a detailed study of IAB and conventional agricultural energy CAE system applications in China s Liaoning and Yunnan Province is conducted The HE 3 impacts of IAB systems in China s rural areas compared to existing CAE systems are quantified The dissertation analyzes the full life cycle costs and benefits of IAB systems including their contributions to energy savings CO 2 emissions reduction agricultural waste reduction increased rural incomes better rural health and improved ecosystem sustainability The analysis relies upon qualitative and quantitative modeling in order to produce a comprehensive assessment of IAB system impacts Finally the dissertation discusses the barriers to greater diffusion of the IAB systems currently in China s rural areas It also provides feasible policy strategies for removing these barriers thus enabling IAB systems to better serve sustainable rural development objectives in China Prospects for the transfer of IAB systems to other developing countries are briefly considered

Bioenergy and Sustainable Development? Ambuj D. Sagar, Sivan Kartha, 2015 Traditional biomass remains the dominant contributor to the energy supply of a large number of developing countries where it serves the household energy needs of over a third of humanity in traditional cookstoves or open fires Efforts to reduce the enormous human health socioeconomic and environmental impacts by shifting to cleaner cookstoves and cleaner biomass derived fuels have had some success but much more needs to be done possibly including the expanded use of fossil derived fuels Concurrently biomass is rapidly expanding as a commercial energy source especially for transport fuels Bioenergy can positively contribute to climate goals and rural livelihoods however if not implemented carefully it could exacerbate degradation of land water bodies and ecosystems reduce food security and increase greenhouse gas GHG emissions For large scale commercial biofuels to contribute to sustainable development will require agriculturally sustainable methods and markets that provide enhanced livelihood opportunities and equitable terms of trade The challenge lies in translating the opportunity into reality

**Rural Biomass Energy Book 2020** Qingfeng Zhang, Makiko Watanabe, Tun Lin, 2010-06-01 The developing world is looking for effective creative ideas for upscaling clean renewable energy No place will gain more socially economically and environmentally from increased access to clean reliable energy than poor rural areas Biomass energy produced from animal and crop wastes is a sensible renewable energy option for rural

areas and it can be cost effective at community and industry scales if guided effectively by governments This publication explores the potential of biomass energy to close the urban rural energy gap raise farmer incomes and mend the environment in the People s Republic of China PRC Its findings are instructive for other developing and medium income countries exploring energy for all strategies The report examines the promises and limitations of leading biomass energy technologies and resources for various distribution scales including but not limited to household biogas digesters The information is based on lessons learned and experiences from the Asian Development Bank financed Efficient Utilization of Agricultural Wastes Project in the PRC as well as findings and conclusions from a technical assistance grant to assist the government draft a national strategy for developing rural biomass energy Bioenergy and Sustainable Development I. Bioenergy And The Environment Janos Pasztor,Lars A Kristoferson,1990-10-03 *Bioenergy Development* Elizabeth Cushion,Gerhard Dieterle,Adrian Whiteman,2012 The last five to ten years have seen a strong resurgence of interest in bioenergy along with the gradual development of more modern and efficient bioenergy production systems This has been driven by several factors including instability in oil producing regions financial market shift of investments in 2007 2008 to commodities and oil extreme weather events and surging energy demand from developing countries Bioenergy developments present both opportunities and challenges for socioeconomic development and the environment and have a number of potential impacts on forests and the rural poor who depend on forests for their livelihoods In developing countries the impact of bioenergy on poverty alleviation will depend on the opportunities that are presented for agricultural development including income and employment generation and the potential to increase poor peoples access to improved types of bioenergy There are significant concerns surrounding the efficiency of different bioenergy options to combat climate change the impact on agriculture food security and sustainable forest management and the social impacts of bioenergy development particularly related to land use changes land tenure and land rights Food insecurity may result if staple crops are used for energy production or land conflicts and if production displaces local communities or restricts access to land The environmental impacts of these developments are uncertain and will vary considerably from case to case The development of bioenergy is likely to have significant impacts on the forest sector directly through the use of wood for energy production and indirectly as a result of land use changes It is expected that energy production from solid biomass will have both direct and indirect impacts on the sector whereas liquid biofuels will mainly have indirect effects Bioenergy for Sustainable Development and International Competitiveness Taylor & Francis Group,2012-02-20 **Bioenergy Development** ,2008
