Chinas Future Nuclear Submarine Force:

China's Future Nuclear Submarine Force Lyle J Goldstein, Andrew S. Erickson, William S. Murray, Andrew Wilson, 2012-04-30 One of the key concerns of naval strategists and planners today is the nature of the Chinese geostrategic challenge Conceding that no one can know for certain China's intentions in terms of future conflict the editors of this hot topic book argue that the trajectory of Chinese nuclear propulsion for submarines may be one of the best single indicators of China's ambitions of global military power Nuclear submarines with their unparalleled survivability remain ideal platforms for persistent operations in far flung sea areas and offer an efficient means for China to project power This collection of essays presents the latest thinking of leading experts on the emergence of a modern nuclear submarine fleet in China Each contribution is packed with authoritative data and cogent analysis The book has been compiled by four professors and analysts at the U S Naval War College who are co founders of the college's recently established China Maritime Studies Institute Given the opaque nature of China's undersea warfare development readers will benefit from this penetrating investigation that considers the potential impact of even the most revolutionary changes in Chinese nuclear submarine capabilities The editors believe that to ignore such possibilities would be the height of strategic folly and represent inexcusable negligence in terms of U S national defense Anyone who is interested in the future of the U S Navy and the defense of the United States will find this book to be essential reading

Joint Force Quarterly, 2008

Tracing the Undersea Dragon Amit Ray, 2021-08-05 This book is a comprehensive study of the development of China's nuclear powered ballistic missile submarines SSBNs It offers insights into the secretive world of nuclear submarines and ballistic missiles of the Chinese PLA Navy and studies how these are likely to grow in the next two decades The volume examines the technological origins of the design and development of Chinese nuclear submarines ballistic missiles and their naval construction capabilities It provides an analysis of the underlying Chinese nuclear doctrine China's maritime geographical constraints for submarine operations and the credibility of its sea based deterrence It draws upon strategy nuclear policy technology geography and operational considerations to holistically predict the likely SSBN force levels of the PLA Navy for various scenarios The book also assesses the spectrum of threats likely from the undersea domain for India and other nations in the Indo Pacific region A key text on an obscure but vital facet of Chinese defence studies this book will be useful for scholars and researchers of strategic affairs international relations and disarmament studies peace and conflict studies geopolitics foreign policy Indo Pacific studies and diplomacy

The Nexus of Naval Modernization in India and China Christopher K. Colley, 2024-03-14 Naval modernization is an extremely expensive time consuming and a relatively rare phenomenon Scholars have proposed various arguments to explain this process ranging from bureaucratic politics to nationalism and to the security dilemma The Nexus of Naval Modernization in India and China demonstrates that from 1990 until 2020 the primary driver of naval modernization resulted from a strategic rivalry Key to strategic rivalries is perceived

threat perceptions that cause decision makers to prepare for worst case scenarios when trying to decipher their enemy's behaviour. When a state believes it is threatened by a rival's naval power, it is likely to pursue its own form of naval modernization for self-protection. Importantly, rivalries do not exist in a vacuum and are frequently linked. This project will reveal how the interconnected nature of rivalries can also cause naval modernization. Through a close examination of scholarly works, government documents and in-depth focused interviews with experts based in India, China, Australia and the U.S., Colley argues that while strategic rivalry is not the only driver of naval modernization, it is the most compelling explanation. Other arguments are frequently embedded within the strategic rivalry model and thus are best seen as only partial drivers. This study contributes to the rivalry research program as well as the policy and security studies literatures.

A Contest for Supremacy: China, America, and the Struggle for Mastery in Asia Aaron L. Friedberg, 2011-08-15
Sober and well-informed. A careful and compelling examination of the U.S.-Chinese relationship from a number of angles. Financial Times. There may be no denying China's growing economic strength, but its impact on the global balance of power remains hotly contested. Political scientist Aaron L. Friedberg argues that our nation's leaders are failing to act expeditiously enough to counter China's growing strength. He explains how the United States and China define their goals and reveals the strategies each is now employing to achieve its ends. Friedberg demonstrates in this provocative book that the ultimate aim of Chinese policymakers is to win without fighting, displacing the United States as the leading power in Asia while avoiding direct confrontation. The United States, on the other hand, sends misleading signals about our commitments and resolve, putting us at risk for a war that might otherwise have been avoided. A much-needed wake-up call to U.S. leaders and policymakers. *A Contest for Supremacy* is a compelling interpretation of a rivalry that will go far to determine the shape of the twenty-first century. *China's Naval Power* Yves-Heng Lim, 2016-05-23 The rapid modernization of the Chinese Navy is a well-documented reality of the post-Cold War world. In two decades, the People's Liberation Army Navy has evolved from a backward force composed of obsolete platforms into a reasonably modern fleet whose growth is significantly shaking the naval balance in East Asia. The rationale behind China's contemporary rise at sea remains, however, difficult to grasp, and few people have tried to see how the current structure of the international system has shaped Chinese choices. This book makes sense of Chinese priorities in its naval modernization in a robust, offensive realist framework. Drawing on Barry Posen's works on sources of military doctrine, it argues that the orientation of Beijing's choices concerning its naval forces can essentially be explained by China's position as a potential regional hegemon. Yves Heng Lim highlights how a rising state develops naval power to fulfil its security objectives, a theoretical perspective that goes farther than the sole Chinese case. [China's New Foreign Policy](#) Tilman Pradt, 2016-11-17 This book analyses how China overcame its meagre reputation in the early 1990s to become an aggressively growing military power and rising threat to the international system. The author focuses on China's new multilateral foreign policy approach, ambitious military build-up programme and economic cooperation initiatives. This

book presents a much needed comparative perspective of China in terms of foreign policy seeking to develop analytical tools to assess China's motivations and moves. The author suggests that understanding China's new foreign policy, its tactics in multilateral organisations and approaches to conflict resolutions are elementary to grasp the new realities of international relations particularly relevant to newly established institutions in the evolving Asian political system which require basic knowledge for analysing the politics in this continent. This book uses an innovative approach: a qualitative analysis of China's foreign policy addressing criteria of reputation management to overcome the perceived China threat.

The Long Game
Rush Doshi, 2021-06-11

For more than a century no US adversary or coalition of adversaries not Nazi Germany, Imperial Japan or the Soviet Union has ever reached sixty percent of US GDP. China is the sole exception and it is fast emerging into a global superpower that could rival if not eclipse the United States. What does China want? Does it have a grand strategy to achieve it and what should the United States do about it? In *The Long Game*, Rush Doshi draws from a rich base of Chinese primary sources including decades worth of party documents, leaked materials, memoirs by party leaders and a careful analysis of China's conduct to provide a history of China's grand strategy since the end of the Cold War. Taking readers behind the Party's closed doors, he uncovers Beijing's long methodical game to displace America from its hegemonic position in both the East Asia regional and global orders through three sequential strategies of displacement. Beginning in the 1980s, China focused for two decades on hiding capabilities and biding time. After the 2008 Global Financial Crisis, it became more assertive regionally following a policy of actively accomplishing something. Finally, in the aftermath of populist elections in 2016, China shifted to an even more aggressive strategy for undermining US hegemony, adopting the phrase 'great changes unseen in a century'. After charting how China's long game has evolved, Doshi offers a comprehensive yet asymmetric plan for an effective US response. Ironically, his proposed approach takes a page from Beijing's own strategic playbook to undermine China's ambitions and strengthen American order without competing dollar for dollar, ship for ship or loan for loan.

China's Coercion of States in the Asia-Pacific Region
Maximilian Ernst, 2025-02-11

This book explains why China chooses to coerce Asia-Pacific regional states despite the risk of such actions creating a backlash and complicating its strategic calculus. China's coercion of neighboring states, often a variation of heavy informal economic sanctions combined with diplomatic pressure and gray zone coercive measures, has been increasingly observable in the past decade. It has become an important tool in China's foreign policy toolbox and is frequently used by Beijing to shape the security-political environment of the Asia-Pacific. The book begins with an appreciation of China's complicated geopolitical exposition and an understanding that such coercion creates backlash since the target state will likely be alienated and pushed into closer security cooperation with the United States, China's main geopolitical rival. Through two in-depth case studies of Chinese coercion targeting the Philippines and South Korea respectively, the book demonstrates that first, the reason China coerces is that the secondary state engages in actions that fundamentally threaten China's security interests, and second, it will coerce these states only if

other policy options geared to change the secondary state's course of action have not worked. Employing balance of power theory and particularly wedge strategies the book solves a pertinent research question and improves our knowledge of contemporary security politics in the Asia Pacific. This book will be of interest to students, scholars and practitioners of Asia Pacific security, Chinese foreign policy and international relations.

Questioning the Carrier Jeff Vandenengel, 2023-11-15
 Winner of The Navy League's 2024 Alfred Thayer Mahan Award for Literary Achievement. The nuclear powered aircraft carrier is naval history's most powerful and versatile warship. It is the reason the U.S. Navy is the predominant force at sea today. Throughout its illustrious history the carrier has overcome serious flaws including its expense, vulnerability, centralization of combat power and its airwing's short range. The U.S. Navy always accepted those flaws because the carrier was the best means of delivering firepower. Today's technologies however provide key opportunities for the U.S. Navy to move beyond the limitations of a carrier-centric fleet by redesigning its force structure. *Questioning the Carrier* examines how the U.S. Navy can embrace the Age of the Missile, network the distributed fleet and diversify to develop a fleet that benefits from the aircraft carrier's many strengths without being wholly dependent on them. By acting on those opportunities the U.S. Navy can develop a structure that performs the carrier-centric fleet's functions more effectively using a force consisting of more platforms with less total risk and within the same long term budget. As adversaries are improving their ability to deter the carrier thus causing its utility to wane the author examines the Navy's past successes to show how it can overcome institutional resistance to change and continue to rule the seas.

Asian Maritime Power in the 21st Century Vijay Sakhuja, 2011. Maritime power has been a key defining parameter of economic vitality and geostrategic power of nations. This book explores how the first decade of the 21st century has witnessed the rise of China and India as confident economic powers pivoting on high growth rates, exponential expansion of science technology and industrial growth.

Assessing China's Naval Power Sarah Kirchberger, 2015-06-23. This book analyzes the rise of China's naval power and its possible strategic consequences from a wide variety of perspectives: technological, economic and geostrategic while employing a historical comparative approach throughout. Since naval development requires huge financial resources and mostly takes place within the context of transnational industrial partnerships this study also consciously adopts an industry perspective. The systemic problems involved in warship production and the associated material, financial, technological and political requirements currently remain overlooked aspects in the case of China. Drawing on first hand working experience in the naval shipbuilding industry the author provides transparent criteria for the evaluation of different naval technologies, strategic value which other researchers can draw upon as a basis for further research in such diverse fields as International Security Studies, Naval Warfare Studies, Chinese Studies and International Relations.

The PLA at Home and Abroad :., 2010. **Geopolitics and the Western Pacific** Leszek Buszynski, 2019-06-07. This book examines the development of China's national ambitions under its current leader Xi Jinping and the dilemma they present for the United States and also Japan. It

emphasises the importance of geopolitics that is the way national strategies and policies are shaped and in some cases determined by geographic location Focusing especially on China s national rejuvenation and its rapidly growing military capability and navy and on the likely impact on the region of China regaining the status and influence it enjoyed in dynastic times the book highlights the hard choices faced by the United States as it seeks to protect its geopolitical position in the Western Pacific particularly in the South China Sea the Korean Peninsula and the Taiwan straits How far should the United States confront China or accommodate China possibly at the risk of undermining its geopolitical position and its alliance relationships with Japan Australia and South Korea The book also discusses the degree to which issues of institution building and economic interdependence can overcome or constrain geopolitical calculations

China Goes to Sea Andrew S. Erickson, Lyle J Goldstein, Carnes Lord, 2009-07-01 In modern history China has been primarily a land power dominating smaller states along its massive continental flanks But China s turn toward the sea is now very much a reality as evident in its stunning rise in global shipbuilding markets its vast and expanding merchant marine the wide offshore reach of its energy and minerals exploration companies its growing fishing fleet and indeed its increasingly modern navy Yet for all these achievements there is still profound skepticism regarding China s potential as a genuine maritime power Beijing must still import the most vital subcomponents for its shipyards maritime governance remains severely bureaucratically challenged and the navy evinces at least as of yet little enthusiasm for significant blue water power projection capabilities This volume provides a truly comprehensive assessment of prospects for China s maritime development by situating these important geostrategic phenomena within a larger world historical context China is hardly the only land power in history to attempt transformation by fostering sea power Many continental powers have elected or been impelled to transform themselves into significant maritime powers in order to safeguard their strategic position or advance their interests We examine cases of attempted transformation from the Persian Empire to the Soviet Union and determine the reasons for their success or failure Too many works on China view the nation in isolation Of course China s history and culture are to some extent exceptional but building intellectual fences actually hinders the effort to understand China s current development trajectory Without underestimating the enduring pull of China s past as it relates to threats to the country s internal stability and its landward borders this comparative study provides reason to believe that China has turned the corner on a genuine maritime transformation If that proves indeed to be the case it would be a remarkable if not singular event in the history of the last two millennia

The Paradox of Power David C. Gompert, 2020 The second half of the 20th century featured a strategic competition between the United States and the Soviet Union That competition avoided World War III in part because during the 1950s scholars like Henry Kissinger Thomas Schelling Herman Kahn and Albert Wohlstetter analyzed the fundamental nature of nuclear deterrence Decades of arms control negotiations reinforced these early notions of stability and created a mutual understanding that allowed U S Soviet competition to proceed without armed conflict The first half of the 21st

century will be dominated by the relationship between the United States and China That relationship is likely to contain elements of both cooperation and competition Territorial disputes such as those over Taiwan and the South China Sea will be an important feature of this competition but both are traditional disputes and traditional solutions suggest themselves A more difficult set of issues relates to U S Chinese competition and cooperation in three domains in which real strategic harm can be inflicted in the current era nuclear space and cyber Just as a clearer understanding of the fundamental principles of nuclear deterrence maintained adequate stability during the Cold War a clearer understanding of the characteristics of these three domains can provide the underpinnings of strategic stability between the United States and China in the decades ahead That is what this book is about *Chinese and Indian Strategic Behavior* George J. Gilboy, Eric Heginbotham, 2012-03-12

Politics Government **China's Energy Strategy** Gabriel B Collins, Andrew S. Erickson, William S. Murray, Lyle J Goldstein, 2012-04-30 A variety of viewpoints is offered in this timely analysis of China s economy and the future shape of Beijing s energy consumption The authors all noted authorities in the fields of economics diplomacy energy and defense consider an unprecedented range of influences and factors to avoid the limitations of looking at the subject myopically or with political bias They conclude that while energy insecurity could eventually lead to an arms race at sea or even a naval conflict that neither side wants there is ample room for Sino American energy dialogue and cooperation in the maritime domain Chinese Aerospace Power Lyle J Goldstein, Andrew S. Erickson, 2012-04-30 China s aircraft carrier program is making major waves well before the first ship has been completed Undoubtedly this development heralds a new era in Chinese national security policy While the present volume presents substantial new insight on that particular question its focus is decidedly broader in scope Chinese Aerospace Power offers a comprehensive survey of Chinese aerospace developments with a focus on areas of potential strategic significance previously unexplored in Western scholarship The book also links these developments to the vast maritime battlespace of the Asia Pacific region and highlights the consequent implications for the U S military particularly the U S Navy **China's Military Power** Roger Cliff, 2015-09-15 Once termed the world s largest military museum the Chinese military has made enormous progress over the past twenty years With skyrocketing military budgets and new technology China s tanks aircraft destroyers and missile capabilities are becoming comparable to those of the United States If these trends continue how powerful will the Chinese military be in the future Will its capabilities soon rival or surpass those of the United States The most comprehensive study of its kind this book provides a detailed assessment of China s military capabilities in 2000 and 2010 with projections for 2020 It is the first of its kind in outlining a rigorous theoretically and empirically grounded framework for assessing military capability based on not just weaponry but also doctrine training equipment and organizational structure This framework provides not only the most accurate assessment of China s military to date but an important new tool in the study of military history
