**China's Program of Weapons Modernization and Proliferation** Randall W. Strauss,1994 **Nuclear Weapons Proliferation in the Next**

**Decade** Peter Lavoy,2020-09-23 The intensification of the Iranian and North Korean nuclear crises has created new fears that deteriorating security conditions in the Middle East Northeast Asia and other regions will lead additional countries to seek their own nuclear arsenals in the years to come This special issue examines the factors that are likely to shape nuclear weapons proliferation over the next decade The internationally recognized authors of this issue many of whom are prominent scholars and others of whom have held influential governmental positions with responsibility for countering nuclear proliferation bring to light the conditions and events that might drive new countries to pursue nuclear weapons the indicators and cautionary signs that can provide early warning that a country is interested in building nuclear bombs and the policy and military measures that can be adopted to prevent or at least dissuade new proliferators The introductory chapter develops a novel analytical approach focusing on the role of nuclear myths and mythmakers and the subsequent chapters draw on this approach to help analysts better understand and policy makers better manage nuclear proliferation over the next ten years

**China's Program of Weapons Modernization and Proliferation** Air War College,2015-12-23 China is changing its armed forces from a large manpower intensive force using low to medium technology weapons to a smaller but more modern force The Chinese are financing the conversion by shifting from a weapons export program based on ideology to one based on profit with relatively few exceptions They are using the profits to acquire high technology weapons from the former Soviet Union This new approach has been successful and their influence in Asia is growing

**China's Security** Melvin Gurtov,Byong-Moo Hwang,1998 Showing how economic technological and bureaucratic factors have reshaped Chinese military thinking and behaviour this text questions the perception of a China threat and provides an appraisal of the Chinese military establishment emphasizing the interplay of domestic and external forces

*The China Threat* Bill Gertz,2013-02-05 The devastating terrorist attacks on the World Trade Center and the Pentagon and America's first domestic bio terrorism mail attacks have shifted America's attention and resources to the immediate threat of international terrorism But we shouldn't be fooled Since the publication of the hardcover edition of *The China Threat* in November of 2000 one thing remains very much the same the People's Republic of China is the most serious long term national security challenge to the United States In fact after the events of September 11 the China threat should seem all the more real for Communist China is one of the most

important backers of states that support international terrorism From the new introduction by the author     **Spying on the Bomb: American Nuclear Intelligence from Nazi Germany to Iran and North Korea** Jeffrey T. Richelson, 2007-09-17

Spying on the Bomb is an engrossing Wall Street Journal global history of the American led effort to spy on every nation with nuclear ambitions A global history of U S nuclear espionage from its World War II origins to twenty first century threats from rogue states For more than sixty years the United States has monitored friends and foes who seek to develop the ultimate weapon Since 1952 the nuclear club has grown to at least nine nations while others are making serious attempts to join Each chapter of Spying on the Bomb chronologically focuses on the nuclear activities of one or more countries intermingling what the United States believed was happening with accounts of what actually occurred in each country s laboratories test sites and decision making councils Jeffrey T Richelson weaves recently declassified documents into his interviews with the scientists and spies involved in the nuclear espionage Spying on the Bomb reveals new information about U S intelligence work on the Soviet Russian French Chinese Indian Israeli and South African nuclear programs on the attempts to solve the mysterious Vela Incident and on current efforts to uncover the nuclear secrets of Iran and North Korea The book also includes spy satellite photographs never before extracted from the national archives     **Report to Congress of the U.S.-China Economic and Security Review Commission** U.S.-China Economic and Security Review Commission, 2006

**Compilation of Hearings Held Before the U.S.-China Security Review Commission** U.S.-China Security Review Commission, 2002     **Current and Future Worldwide Threats to the National Security of the United States** United States. Congress. Senate. Committee on Armed Services, 2008     [The Plutocene: Blueprints for a Post-Anthropocene Greenhouse Earth](#) Andrew Yoram Glikson, 2017-07-10 This book presents projections and blueprints of the future geologic period climate and biosphere based on our current understanding of the Earth s history and recent developments in the atmosphere ocean cryosphere system By the second decade of the 21st century it has become clear that rather than channel its efforts into protecting its planetary biosphere and living species Homo sapiens continues to sink its remaining resources into weapons including nuclear missiles thus increasing the risk of intentional or accidental spread of radioactive nuclides on land oceans and atmosphere With time possibility becomes probability and probability becomes certainty heralding a transition from the Anthropocene to a new geological period named here as Plutocene after the element Plutonium During the Plutocene the biosphere is dominated by elevated temperatures analogous to the Pliocene 2 6 5 3 Ma ago or the Miocene 5 3 23 Ma ago when mean global temperatures were 2 to 4 degrees Celsius warmer and sea levels 20 to 40 meters higher than pre industrial levels High levels of radioactivity will persist for at least 20 000 years and acid oceans will severely limit biological activity to the hardiest species Atmospheric CO2 higher than 500 ppm with residence time on the order of thousands of years will delay the subsequent glacial cycle These factors restrict comparisons of the Plutocene with biosphere conditions during the Miocene and Pliocene periods partly because the flora and fauna evolved more gradually during these

periods unlike the abrupt climate shift of state during the second half of the 20th century and first part of the 21st century Following a long lull in biological activity dominated by radiation resistant organisms especially Arthropods a resumption of glacial cycles and decline in radioactivity will lead to the re emergence of descendants of burrowing mammals and other genera Depending on the intensity of radioactive pollution hunter gatherer humans may survive in northern latitudes relatively cold high altitude mountain valleys and elevated volcanic islands In some areas subsistence farming may be possible A new cycle will commence Strategic Review ,1995 dedicated to the advancement and understanding of those principles and practices military and political which serve the vital security interests of the United States **Chinese**
