Chinese Energy Futures And Their Implications For The United States:

Chinese Energy Futures and Their Implications for the United States George G. Eberling, 2011-11-16 China's rise in the global arena is undeniably altering the global status quo. Its rise is closely linked to and reflected in its rising dependence on imported oil, adroit soft power, economic prowess, and corresponding impressive economic growth, its military modernization, and its strategic engagement of the world as an alternative model of political and economic development. As the status quo changes, the United States theoretically becomes less influential politically, economically, and militarily because China is skillfully harnessing and strategically exercising the elements of national power to acquire scarce oil energy resources in the Near East, Western Hemisphere, and Sub-Saharan Africa. *Chinese Energy Futures and Their Implications for the United States* by George Eberling examines how Chinese oil energy specifically will shape future Sino-American relations under conditions of dependency and non-dependency, and whether competition or cooperation for scarce energy resources will result. Eberling uses both scenario analysis and the PRINCE method to examine three possible Chinese oil energy futures: Competitive Dependency, Competitive Surplus, and Cooperative Surplus. *Chinese Energy Futures* also discusses and evaluates the strategic implications of these scenarios with respect to the United States.

Chinese Energy Futures and Their Implications for the United States George Eberling, 2011-01-01 *Chinese Energy Futures and Their Implications for the United States* by George Eberling shows how China will most likely address its growing oil energy dependence. Eberling's study uses scenario analysis and the PRINCE model to determine what will be the most likely U.S. foreign policy consequences stemming from the most current literature available on energy security and foreign policy. *Chinese Energy Futures* also contributes to the literature on Chinese and United States energy security, foreign policy, political economy, and political risk analysis. **Future Oil**

Demands of China, India, and Japan George G. Eberling, 2014-07-02 *Future Oil: Demands of China, India, and Japan* examines how Chinese oil energy will likely shape future Sino-Indian and Sino-Japanese relations under conditions of dependency and non-dependency, and whether competition or cooperation for scarce energy resources will result. The author lists and describes three possible Chinese oil energy futures or scenarios: Competitive Dependency, Competitive Surplus, and Cooperative Surplus, using Scenario Analysis and the PRINCE Method to subsequently estimate their associated likelihoods. Further, this book discusses and evaluates their strategic implications for India and Japan and estimates the most likely oil energy future. This book argues that China's rising dependence on imported oil, along with its adroit use of soft power, economic prowess, strategic engagement of the world as an alternative model of political and economic development, military modernization, and rapid economic growth, can only mean that it will alter the global status quo and become the dominant actor in world affairs in the near future. India and Japan will be less influential economically because China is skillfully harnessing and strategically exercising the elements of national power: diplomatic, informational, military, and economic, to acquire scarce oil energy resources in the Near East, Western Hemisphere, and Sub-Saharan Africa. [China's Bilateral](#)

Relations with Its Principal Oil Suppliers George G. Eberling, 2017-10-23 This book examines China's bilateral relations with its established suppliers of crude petroleum and on occasion petroleum gas products including liquefied natural gas LNG based on a five dimensional framework political diplomatic relations economic trade relations military security relations cultural relations and petroleum energy relations A five dimensional approach is comprehensive in nature and offers a complete understanding of China's complex relationships rather than looking solely on more typical perspectives like bilateral trade security relationships or energy ties More often than not social science literature focuses on one or more aspects of China's bilateral relations which does not provide a complete picture of the complex nature of its interstate ties This book endeavors to bridge this gap and look more substantially at China's bilateral relationships with energy petroleum relations being the key aspect linking each one of them The specific bilateral relationships examined are China's relations with Angola Brazil Republic of the Congo Iran Iraq Kazakhstan Kuwait Oman Russia Saudi Arabia South Sudan Sudan United Arab Emirates and Venezuela These countries matter because their crude petroleum and petroleum gas product exports account for over 50 percent of China's annual oil consumption
