Atomic Layer Deposition in Energy Conversion Applications Julien

Bachmann,2017-05-30 Combining the two topics for the first time this book begins with an introduction to the recent challenges in energy conversion devices from a materials preparation perspective and how they can be overcome by using atomic layer deposition ALD By bridging these subjects it helps ALD specialists to understand the requirements within the energy conversion field and researchers in energy conversion to become acquainted with the opportunities offered by ALD With its main focus on applications of ALD for photovoltaics electrochemical energy storage and photo and electrochemical devices this is important reading for materials scientists surface chemists electrochemists electrotechnicians physicists and those working in the semiconductor industry ALD 2008 Book of Abstracts ,2008 The Effects of the Purge Flow Rate and Its Flow Orientation in the Atomic Layer Deposition (ALD) Simulations of Aluminium Oxide (Al₂O₃) Charles Emeka Nwanna,2019 *AVS-ALD & Baltic ALD 2012 - 12th International Conference on Atomic Layer Deposition* American Vacuum Society,2012 *A Quantified Dosing ALD Reactor with In-situ Diagnostics for Surface Chemistry Studies* Thomas J. the substrate materials selective SAM formation on specific areas of patterned substrates can be achieved leading to successful achievement of AS ALD. Although SAM assisted AS ALD is promising, challenges remain in developing more robust AS ALD systems with broader applicability. In the first part of this thesis, dodecanethiol DDT is used as the inhibitor for AS ALD on metal dielectric substrates. We show that a DDT passivation layer forms only on Cu but not on SiO₂ or low k dielectric surfaces, thus allowing AS ALD of ZnO and Al₂O₃ on the dielectric regions of metal dielectric patterned substrates to be achieved. By conducting DDT deposition on slightly oxidized Cu surfaces which consist mainly of Cu₂O, we further show that the packing of the DDT SAM can be enhanced, leading to improvement of the ALD blocking ability. In addition, because thiols have been shown to form multilayer structures on CuO covered Cu substrates, the impact of the DDT structure, i.e. monolayer vs. multilayer, on both the blocking ability and edge effects at the interface of metal dielectric patterns during AS ALD is studied. The results indicate that multilayer DDT blocks ZnO ALD more effectively than does monolayer DDT, while monolayer DDT is more efficacious in inhibiting Al₂O₃ ALD. The study on the interfacial effect in patterns with feature sizes of 20–100 nm shows that multilayer DDT can lead to some undesired effects: inhibition of ZnO at the SiO₂ edges and nonuniform ZnO deposition on SiO₂ regions; much thinner ZnO film at small pitch sizes. On the other hand, ZnO grows uniformly on SiO₂ regions without the above mentioned issues when monolayer DDT is used. The second part of the thesis focuses on developing new AS ALD systems. We demonstrate that an octadecyltrimethoxysilane (OTMS) SAM is selectively formed on SiO₂ of Cu/SiO₂ patterns only when DDT is first used as the protector on Cu surfaces to prevent OTMS adsorption on Cu. After selective removal of the DDT protector by thermal treatment prior to ALD, AS ALD of Al₂O₃ and ZnO on Cu regions of the patterns is demonstrated. In addition to selective deposition onto metal dielectric patterns, AS ALD on more general material systems for which chemically similar materials are present on the substrate surface at the same time is investigated. We achieve the selective formation of octadecylphosphonic acid (ODPA) SAMs on various metal oxide substrates including Al₂O₃, HfO₂, TiO₂, and Ta₂O₅ over SiO₂ by relying on the different reactivity of the ODPA headgroup on these oxide surfaces. AS ALD is then demonstrated with SiO₂ as the growth surface and the other four metal oxides as the nongrowth surface. To further obtain selectivity in more general systems, the solvent and deposition time for ODPA SAM formation are optimized. We show that selective deposition of ZnO and Al₂O₃ ALD between different metal oxide substrates can be achieved with especially good selectivity between Al₂O₃ growth surface vs. HfO₂ nongrowth surface. In the final part of this thesis, the breakdown behavior of SAM inhibitors in AS ALD is investigated. The octadecyltrichlorosilane (ODTS) SAM paired with Al₂O₃ and ZnO ALD is used as the model system for the SAM inhibitor and ALD process, respectively. The results show that no notable changes in the crystallinity and structure, thickness, density, and roughness of ODTS SAMs are observed until a significant amount of ALD nucleation occurs. The study also reveals different morphologies of the ALD materials deposited on top of ODTS SAMs: Al₂O₃ tends to form a relatively continuous film, whereas ZnO forms dispersed nanoparticles. Overall, the studies presented in this

thesis provide greater understanding of AS ALD and open up more opportunities for new applications of AS ALD *Atomic*
