Springer Handbook of Geographic Information Wolfgang Kresse, David M. Danko, 2012-02-21 Computer science provides a powerful tool that was virtually unknown three generations ago. Some of the classical fields of knowledge are geodesy, surveying, cartography and geography. Electronics have revolutionized geodetic methods. Cartography has faced the dominance of the computer that results in simplified cartographic products. All three fields make use of basic components such as the Internet and databases. The Springer Handbook of Geographic Information is organized in three parts: Basics, Geographic Information and Applications. Some parts of the basics belong to the larger field of computer science. However, the reader gets a comprehensive view on geographic information because the topics selected from computer science have a close relation to geographic information. The Springer Handbook of Geographic Information is written for scientists at universities and industry as well as advanced and PhD students.

Managing eBook Metadata in Academic Libraries

Donna E. Frederick, 2016-01-07 Managing eBook Metadata in Academic Libraries. Taming the Tiger tackles the topic of eBooks in academic libraries, a trend that has been welcomed by students, faculty, researchers and library staff. However, at the same time, the reality of acquiring eBooks, making them discoverable and managing them presents library staff with many new challenges. Traditional methods of cataloging and managing library resources are no longer relevant where the purchasing of eBooks in packages and demand driven acquisitions are the predominant models for acquiring new content. Most academic libraries have a complex metadata environment wherein multiple systems draw upon the same metadata for different purposes. This complexity makes the need for standards based interoperable metadata more important than ever. In addition to complexity, the nature of the metadata environment itself typically varies slightly from library to library, making it difficult to recommend a single set of practices and procedures which would be relevant to and effective in all academic libraries. Considering all of these factors together, it is not surprising when academic libraries find it difficult to create and manage the metadata for their eBook collections. This book is written as a guide for metadata librarians, other technical services librarians and ancillary library staff who manage eBook collections to help them understand the requirements for eBook metadata in their specific library context, to create a vision for eBook metadata management and to develop a plan which addresses the relevant issues in metadata management at all stages of the lifecycle of eBooks in academic libraries, from selection to deselection or preservation. Explores the reasons behind creating records for our resources and challenges libraries to think about what that means for their context. Discusses the complex nature of academic libraries and the electronic resources they

require Encourages librarians to find their own way to manage metadata Celebrating the Past and Future of Marketing and Discovery with Social Impact Juliann Allen, Bruna Jochims, Shuang Wu, 2022-06-29 For the 50th Anniversary of the Academy of Marketing Science the 2021 AMS Annual Conference and Marketing World Congress celebrates the history of marketing while also exploring its future This includes research on possible new theory discoveries and findings that could lead to more efficient and impactful responses by marketers to the current multi faceted global challenge array The volume proposes that marketers strive to continue to offer value in a socially responsible way to the consumers within Articles in this volume explore the influence of marketing innovations leveraged by the rising influence of artificial intelligence virtual reality mechanamorphics a proliferation of data changing economic power concentration and a myriad of other factors Founded in 1971 the Academy of Marketing Science is an international organization dedicated to promoting timely explorations of phenomena related to the science of marketing in theory research and practice Among its services to members and the community at large the Academy offers conferences congresses and symposia that attract delegates from around the world Presentations from these events are published in this Proceedings series which offers a comprehensive archive of volumes reflecting the evolution of the field Volumes deliver cutting edge research and insights complementing the Academy s flagship journals the Journal of the Academy of Marketing Science JAMS and AMS Review Volumes are edited by leading scholars and practitioners across a wide range of subject areas in marketing science Machine Learning for Materials Discovery N. Students with Both Gifts and Learning Disabilities Tina A. Newman, Robert J. Sternberg, 2012-12-06 We were motivated to edit this book when we began to hear stories of exceptional students who were struggling with reading writing or math but who could solve seemingly any problem with computers or build the most intricate structures with Legos or could draw beautiful pictures or could tell the most creative stories but ended up in tears when asked to write it out How is it possible to have so much talent in some areas and yet to appear to have a disability in another What resources are available for these students How can we ensure that these students abilities are nurtured and developed Our goal in this book is to provide ideas and possibly even tentative answers for educators and to stimulate more questions to be answered by researchers We have ourselves been addressing related questions for some time Our group at the PACE Center at Yale has explored the development of abilities competencies and expertise that allow people to be successful in life Through this work we have collaborated with school districts and other educators and researchers across the country to expand the notion of what is traditionally thought of as intelligence We use the concept of successful intelligence to allow for the possibility that the skills traditionally taught in school are not the only ones and often not even the most important ones that allow people to be successful in the world
