Climate Change Joseph Alcamo, Jorgen E. Olesen, 2012-03-23 Life in Europe will indeed go on as the climate changes but not in the same way as before. The air will be warmer, winds will change, patterns of rainfall and snowfall will alter, and sea level is likely to rise. These phenomena are already being seen. Europe will in the future experience marked changes in vegetation cover, increased floods along rivers and coastlines, as well as more frequent droughts and forest fires, often leading to large societal costs. The changes will be minor in some cases, profound in others, but in any case pervasive. This book uses the most up-to-date information issued by the IPCC Intergovernmental Panel on Climate Change and informs readers about these effects, as well as showing how Europe is contributing to attempts to slow the tempo of global climate change and how it can adapt to the climate change that seems unavoidable. *Life in Europe under Climate Change* makes essential information on climate impacts in Europe accessible to a broad audience, including students, politicians, planners, and members of non-governmental organizations.

Our Earth Matters B.H. Desai, 2021-06-21 On 21 May 2019 it was officially recognized that we are now living in the Anthropocene, our Earth's latest geological epoch named for the unmistakable imprint of human activities. This announcement came almost 60 years after the publication of Rachel Carson's landmark work of environmental writing, *Silent Spring*, and next year 2022 it will be 50 years since the first UN Conference on the Human Environment held in Stockholm in June 1972. This book *Our Earth Matters: Pathways to a Better Common Environmental Future* is a special issue of the journal *Environmental Policy and Law*, which was first published in 1975. It presents 21 invited contributions by outstanding scholars from around the world which examine existing global regulatory approaches, processes, instruments, and institutions for the protection of the global environment. The articles are grouped under four headings: Prognoses, Processes, Problematique, and Prospects, and in them the authors have sought to explore answers to the existential environmental crisis. They urge us to ponder our reckless destruction of natural spaces, endangering of plant and animal species, poisoning of the environment, and general disturbance of our essential ecological processes. The primary objective of the book is to raise the awareness of the global audience by inspiring scholars and decision makers to re-examine current global approaches to environmental issues and explore the future trajectory with new ideas and frameworks for international environmental governance in the 21st century and beyond. The book will be of interest to all those working to secure the sustainable future of the human race on our only abode, planet Earth. Bharat H. Desai is Professor of International Law and Jawaharlal Nehru Chair in International Environmental Law, Centre for International Legal Studies, School of International Studies, Jawaharlal Nehru University, New Delhi. Editor in Chief of the journal *Environmental Policy and Law*, Amsterdam, IOS Press, and of the *Yearbook of International Environmental Law*, Oxford, OUP.
