Chapter 13: Managing Patient Care Potter: Essentials for Nursing Practice, 8th Edition

MULTIPLE CHOICE

1. A registered nurse works as a case manager in the local hospital. What *primary* role will the nurse be fulfilling?
 - a. Coordinating care for patients with a specific condition
 - b. Only working with primary health care providers
 - c. Directing care of all patients in the hospital setting
 - d. Providing direct care to specific patients

ANS: A

What is unique about case management is that clinicians, either as individuals or as part of a collaborative group, oversee the management of patients with specific case types, focusing on length of stay and improving clinical outcomes (e.g., patients with specific diagnoses presenting complex nursing and medical problems such as heart failure or diabetes). Case managers work with social services, dietitians, and physical therapists to name a few. Case managers do not care for all patients, just a specific case type. Case managers do not provide direct care. Instead they collaborate with and supervise the care that other staff members deliver.

REF: 228

OBJ: Differentiate among the types of nursing care delivery models.
