Coastal Karst Landforms Michael J. Lace, John E. Mylroie, 2013-06-28 Carbonate rock coasts are found world wide from continental shorelines of the Adriatic Sea of Europe to the Yucatan Peninsula of North America and on tropical islands from Rodrigues Island in the Indian Ocean to the Mariana Islands in the Pacific Ocean to the Bahama Islands in the Atlantic Ocean Such coasts are well known for their unusual and distinctive karst landforms Karst processes particularly those associated with coastal landforms are proving to be surprisingly unique and complex This volume presents a comprehensive overview of the processes associated with coastal karst development comparing examples from a broad geographical and geomorphological range of island and continental shoreline paleoshoreline settings including a review of pseudokarst processes that can compete with and overprint dynamic coastal karst landscapes As effective management of hydrologic resources grows more complex coastal caves and karst represent fundamental components in associated coastal aquifers which in the rock record can also form significant petroleum reservoirs Audience By providing a clearer understanding of the geological biological archaeological and cultural value of coastal caves and karst resources this volume offers a critical tool to coastal researchers and geoscientists in related fields and to coastal land managers as it illustrates the diversity of coastal karst landforms the unique processes which formed them the diversity of resources they harbor and their relationship to coastal zone preservation strategies and the development of sustainable management approaches **Coastal Karst**

Parise, F. Gabrovsek, G. Kaufmann, N. Ravbar, 2018-06-18 This volume covers major advances in the study of the

geomorphology hydrology engineering geology and management of these specialized and fragile environments The book will be valuable for geologists engineers and geophysicists interested in karst along with land planners developers and managers of show caves natural parks and reserves in karst areas **Environmental Management and Governance** Charles W. Finkl, Christopher Makowski, 2014-09-16 This book deals with recent advances in coastal marine environmental management and governance Various chapters consider new aspects of conservation assessment of ecosystem health status environmental survey and protection frameworks of ocean service and governance new applications of geo processing and GIS technology beach management aquaculture site selection assessment of water quality brine disposal and temperature dispersion from nuclear power plants exploration and management of coastal karst changing perceptions of dune management advances in interpretation of sea level indicators and real time environmental monitoring New advances in both environmental management and governance are of the utmost importance for sustaining critical coastal marine areas Offering such a diverse collection of works from coastal scientists around the world who discuss many techniques and methods at the forefront of management and governance this publication will be of interest to coastal researchers coastal zone managers and regulatory agency personnel The Spanish Coastal Systems Juan A. Morales, 2018-09-03 This monograph presents the state of art of the geologic knowledge about the Spanish coast obtained through scientific research in the last 30 years From a general point of view coasts are the most quickly changing systems of the Earth This is critical since many human resources such as the main part of economic and social activities are located in the coastal areas Especially in the case of Spain these coasts include cities wide industrial areas including harbor complexes important ecologic systems and our main economic resource tourism Understanding the dynamic functioning of each element of this coast is vital for correct future coastal management so as to solve problems derived from bad plans developed in the last decades of the twentieth century This is a valuable text for advanced graduate students and coastal researchers which connects the specific dynamic functioning of the main Spanish coastal environments and their relationships with human activities **Rock Coast Geomorphology** D.M. Kennedy, W.J. Stephenson, L.A. Naylor, 2014-08-20 Rocky landforms dominate large portions of the world's coast Cliffs and shore platforms form spectacular landscapes yet when compared to other landforms they are relatively unstudied with many contemporary controversies dating back to the mid nineteenth century The past decade has seen a reinvigoration of research driven by advances in technology that now enable precise measurements of erosion to the micron scale and quantification of wave energy onto and through cliff edifices to be made as well as being able to directly date rock surfaces In order to integrate this diverse range of research this volume's regional approach first integrates the latest data with longstanding theory and then analyses this research through the boundary conditions that exist in each area The volume brings together the research leaders in the field includes chapters on nearly all the major rock coasts of the world and identifies future research needs **The Karst Systems of Florida** Sam Upchurch, Thomas M. Scott, MICHAEL

ALFIERI, Beth Fratesi, Thomas L. Dobecki, 2018-09-29 This book discusses the geology hydrogeology and water quality geochemistry of karst systems in geologically young terrain using the state of Florida as an example Also discussed are sinkhole development models sinkhole risk eogenetic karst features developed in rocks as young as 125 000 years and as old as 65 million years and karst landscapes of Florida including regional geology and geomorphology with important examples of karst features such as springs sinkholes caves and other karst landforms The eogenetic karst of Florida is largely covered and this book extensively discusses the interactions of karst processes with sand and clay rich cover materials Australian Caves and Karst Systems John Webb, Susan White, Garry K. Smith, 2023-08-31 This book part of the series Cave and Karst Systems of the World begins with a review of the interaction between people and caves in Australia including conservation followed by descriptions of the spectacular cave diving sites before comprehensively covering all the major carbonate and noncarbonate karst areas subdivided by rock type and region and including the origin of the caves This is followed by broad overviews of cave minerals and speleothems cave biology and cave fossils Each section was written by one or more specialists in the topic and is illustrated by clear diagrams and superb colour photos The book emphasises the unique aspects of the Australian karst including the variability in the age of the caves very old to very young and the impact of isolation on the stygofauna as well as the vertebrate fossils preserved in the caves Written in an easy to read style the book is a primary reference guide to Australian karst and represents a valuable asset for anyone interested in the topic not only cavers and academics Hypogene Karst Regions and Caves of the World Alexander Klimchouk, Arthur N. Palmer, Jo De Waele, Augusto S. Auler, Philippe Audra, 2017-08-17 This book illustrates the diversity of hypogene speleogenetic processes and void conduit patterns depending on variations of the geological environments by presenting regional and cave specific case studies The cases include both well known and newly recognized hypogene karst regions and caves of the world They all focus on geological hydrogeological geodynamical and evolutionary contexts of hypogene speleogenesis The last decade has witnessed the boost in recognition of the possibility global occurrence and practical importance of hypogene karstification speleogenesis i e the development of solutional porosity and permeability by upwelling flow independent of recharge from the overlying or immediately adjacent surface Hypogene karst has been identified and documented in many regions where it was previously overlooked or misinterpreted The book enriches the basis for generalization and categorization of hypogene karst and thus improves our ability to adequately model hypogene karstification and predict related porosity and permeability It is a book which benefits every researcher student and practitioner dealing with karst Textbook of Limnology Gerald A. Cole, Paul E. Weihe, 2015-11-25 The interdisciplinary nature of limnology requires lucid and well integrated coverage of biology chemistry physics earth science and resource management Paul Weihe skillfully accomplishes this objective in his revision of Gerald Cole s classic limnology text This long awaited revision introduces concepts in straightforward terms replete with detailed examples elegant illustrations and up to date well researched documentation

volume brings together alternate stories of sites that fall outside the large cash crop estates Employing innovative research tools and integrating data from Dominica St Lucia the Dominican Republic Jamaica Barbados Nevis Montserrat and the British Virgin Islands the contributors investigate the oft overlooked interstitial spaces where enslaved Africans sought to maintain their own identities inside and outside the fixed borders of colonialism Despite grueling work regimes and social and economic restrictions people held in bondage carved out places of their own at the margins of slavery's reach These essays reveal a complex world within and between sprawling plantations a world of caves gullies provision grounds field houses fields and the areas beyond them where the enslaved networked interacted and exchanged goods and information The volume also explores the lives of poor whites Afro descendant members of military garrisons and free people of color demonstrating that binary models of black slaves and white planters do not fully encompass the diversity of Caribbean identities before and after emancipation Together the analyses of marginal spaces and postemancipation communities provide a more nuanced understanding of the experiences of those who lived in the historic Caribbean and who created nurtured and ultimately cut the roots of empire A volume in the Florida Museum of Natural History Ripley P Bullen Series
