Government-wide Index to Federal Research & Development Reports, 1967 **Natural Polymers and Biopolymers II**

Sylvain Caillol, 2021-05-05 BioPolymers could be either natural polymers polymer naturally occurring in Nature such as cellulose or starch or biobased polymers that are artificially synthesized from natural resources Since the late 1990s the polymer industry has faced two serious problems global warming and anticipation of limitation to the access to fossil resources One solution consists in the use of sustainable resources instead of fossil based resources Hence biomass feedstocks are a promising resource and biopolymers are one of the most dynamic polymer area Additionally biodegradability is a special functionality conferred to a material bio based or not Very recently facing the awareness of the volumes of plastic wastes biodegradable polymers are gaining increasing attention from the market and industrial community This special issue of Molecules deals with the current scientific and industrial challenges of Natural and Biobased Polymers through the access of new biobased monomers improved thermo mechanical properties and by substitution of harmful substances This themed issue can be considered as collection of highlights within the field of Natural Polymers and Biobased Polymers which clearly demonstrate the increased interest in this field We hope that this will inspire researchers to further develop this area and thus contribute to futures more sustainable society Surface Modification and Coating of Fibers, Polymers, and Composites

Edible Films and Coatings Maria Pilar Montero Garcia,M. Carmen Gómez-Guillén,M. Elvira López-Caballero,Gustavo V. Barbosa-Cánovas,2016-09-19 The search for better strategies to preserve foods with minimal changes during processing has been of great interest in recent decades Traditionally edible films and coatings have been used as a partial barrier to moisture oxygen and carbon dioxide through selective permeability to gases as well as improving mechanical handling properties The advances in this area have been breathtaking and in fact their implementation in the industry is already a reality Even so there are still new developments in various fields and from various perspectives worth reporting Edible Films and Coatings Fundamentals and Applications discusses the newest generation of edible films and coatings that are being

especially designed to allow the incorporation and or controlled release of specific additives by means of nanoencapsulation layer by layer assembly and other promising technologies Covering the latest novelties in research conducted in the field of edible packaging it considers state of the art innovations in coatings and films novel applications particularly in the design of gourmet foods new advances in the incorporation of bioactive compounds and potential applications in agronomy an as yet little explored area which could provide considerable advances in the preservation and quality of foods in the field

Advances in Thermal Energy Storage Systems Luisa F. Cabeza,2014-10-31 Thermal energy storage TES technologies store thermal energy both heat and cold for later use as required rather than at the time of production They are therefore important counterparts to various intermittent renewable energy generation methods and also provide a way of valorising waste process heat and reducing the energy demand of buildings This book provides an authoritative overview of this key area Part one reviews sensible heat storage technologies Part two covers latent and thermochemical heat storage respectively The final section addresses applications in heating and energy systems Reviews sensible heat storage technologies including the use of water molten salts concrete and boreholes Describes latent heat storage systems and thermochemical heat storage Includes information on the monitoring and control of thermal energy storage systems and considers their applications in residential buildings power plants and industry
