Division, 1987 *Application of thermal methods to enhanced oil recovery: Numerical and experimental investigations* Taofik Nassan, 2024-12-05 Reservoir simulation is a powerful tool to model fluid flow within oil and gas reservoirs and predict their behaviour This dissertation is devoted primarily to model some thermal enhanced oil recovery TEOR methods Two software were used for this purpose and namely Comsol Multiphysics and CMG Computer Modelling Group The dissertation can be classified into three parts and all of them are standalone that discuss different topics within TEOR The work starts with reviewing enhanced oil recovery EOR methods with concentration on thermal methods TEOR for heavy oil and bitumen Basics of mathematical modelling of single two phase and three phase flow in porous media that is the base of all commercial and scientific reservoir simulation software are reviewed Formulations of the set of representative PDEs are reviewed and other formulations are suggested and applied directly in subsequent sections in Comsol Multiphysics Part 1 The application of finite element method FEM in reservoir simulation has been discussed and evaluated using Comsol Multiphysics package which is based on Galerkin approach In the demonstrated problems the mathematical model is solved using mathematics module in Comsol Multiphysics Energy equation in 1D Buckley Leverett benchmark two phase flow model on inverted 5 spot scheme in 3D and SAGD process PDE model are all solved and discussed FEM using Comsol Multiphysics looks promising at moderate mobility ratios Part 2 A comparison of water flooding with steam injection in heavy oil reservoirs as secondary stage is demonstrated and discussed The whole modelling was achieved by CMG STARS A comparison of five different scenarios is shown SPE4 comparative project data were used for this purpose The results showed that steam can achieve

more recovery in a short period of time with an ultimate recovery factor higher than cold recovery followed by steam flooding process Part 3 A series of flooding and in situ combustion experimental work that has been achieved in Kazan Federal University in cooperation with Institute of Drilling Engineering and Fluid Mining IBF is elaborated briefly and discussed Four experiments with different core samples consolidated and unconsolidated were run between 05 2020 and 05 2021 The samples were taken from a Russian extra heavy oilfield with initial viscosity around 600 000 cP The results were evaluated and a numerical model was built using CMG STARS The numerical results were correlating the experimental results Relative permeability data were history matched for flooding processes and this data was used for in situ combustion model Modelling of the reactions in in situ combustion was a challenge to match the experimental results The final results showed that steam injection was not the best recovery method for this oilfield and in situ combustion was the best available technique with the highest recovery factor

The Design of Digital Democracy Gianluca Sgueo,2023-08-11 Ever stronger ties between technology entertainment and design are transforming our relationship with democratic decision making When we are online or when we use digital products and services we tend to focus more on certain factors like speed of service and user friendliness and to overlook the costs both for ourselves and others As a result a widening gap separates our expectations of everything related to digitalization including government and the actual practice of democratic governance Democratic regulators unable to meet citizens demands for tangible fast and gratifying returns are seeing the poorest results ever recorded in terms of interest engagement and retention despite using the most cutting edge technologies This book explores various aspects of the relationship between democracy technology and entertainment These include on the one hand the role that digital technology has in strengthening our collective intelligence nurturing empathic relations between citizens and democratic institutions and supporting processes of political aggregation deliberation and collaboration On the other hand they comprise the challenges accompanying digital technology for representation transparency and inclusivity in democratic decision making The book s main argument is that digital democratic spaces should be redesigned to narrow the gap between the expectations and outcomes of democratic decision making It suggests abandoning the notion of digital participatory rights as being fast and easy to enjoy It also refutes the notion that digital democratic decision making can only be effective when it delivers rapid and successful responses to the issues of the day regardless of their complexity Ultimately the success or failure of digital democracy will depend on the ability of public regulators to design digital public spaces with a commitment to complexity so as to make them appealing but

also effective at engaging citizens

Aeromicrobiology Mathew Olusoji Ilori, Oluwafemi Sunday Obayori, Lateef Babatunde Salam, 2023-02-04 Aeromicrobiology provides a detailed and systematic analysis of the microbial communities and toxins collectively called bioaerosols that can be found in air. It provides information on the basics of Aeromicrobiology, the fate and transport of microorganisms in air, and the fundamental differences between intramural and extramural Aeromicrobiology. Leaning heavily on the current state of science, detailed information on the sampling and analysis of bioaerosol samples is provided. Subsequent chapters comprehensively discuss various airborne microbial groups and toxins, while the final chapter is dedicated to bioaerosol control strategies, biosafety, and biosecurity. There are limited resources on Aeromicrobiology. In rare instances where there are resources on Aeromicrobiology, they are often restricted to chapters in books or even supplementary materials. The emergence of new airborne pathogens, the aerosolization of microorganisms hitherto believed not to be airborne, and the proliferation of technologies for sampling, analysis, and control of bioaerosols makes it imperative for this title, which streamlines and succinctly presents the new body of knowledge in the field. Leans heavily on current state of the art technologies used in sampling and analysis of bioaerosol samples, such as metagenomics and sensor-based hybrid technologies, among others. Dedicates considerable attention to airborne and droplet-borne viruses against the background of SARS-CoV-2 and related pathogens. Comprehensively attends to regulatory aspects of bioaerosol control, highlighting various policies and regulations aimed at achieving biosecurity and curbing bioterrorism. Helps researchers and policy makers in various fields who are often confronted with the need for basic information delivered in seamless style without loss of essential content.
