Virginia Woolf and the Age of Listening | Virginia Woolf à l'ère de l'écoute

Adèle Cassigneul, Anne-Marie Smith-Di Biasio, 2025-04-24 Listening was the spirit of the age as the invention of psychoanalysis and of radio marked the turn of the twentieth century Virginia Woolf and the Age of Listening brings together contributions which tune into that acoustic quality at once present in Woolf's time in her texts and in the readings which here echo those very listening techniques Indeed the listening mind as a reading surface for the receptivity and reconstruction of sound waves embodies a shift which informs the thinking of many chapters in this volume In their attention to listeners in the text and to those who make up the work of reception in both English and French these readings consider Woolf's oeuvre as an echo chamber reverberating with intertextual echoes in a multi-layered representational network They form a constellation of answers to the call of the Age of Listening

Eros and Alienation Alan Sears, 2025-01-20

Sears takes social reproduction feminism and queer Marxism in exciting new directions as he historicizes penetration and orgasms He expands the concept of alienated labor to all life making and founds a queer ecology foregrounding colonized racialized and disabled voices Peter Drucker author of Warped Meticulously outlines how capitalism shapes human intimacy A sweeping original analysis that challenges how we think about sexuality life making and building a better world Holly Lewis author of The Politics of Everybody A compelling argument on the pervasive alienation of capitalist society that truncates and distorts our capacities for creative expression love and human flourishing M E O'Brien author of Family Abolition Our deeply human drive to shape the world around us and fulfill ourselves through labor is subverted by capitalist alienation leaving us to find fulfillment elsewhere As a result our erotic drives become the central focus for transformation and life making but are themselves restricted and fueled by whatever energy is left after completing the monetized or social reproductive work required to survive This alienation encounters ongoing resistance as life making activity can never be fully separated from the person who labors Eros and Alienation delves into the underexplored relationship between alienated labor and sexuality Alan Sears explores the ways this alienation frames the processes of gender and sexual formation showing how the organization of work contributes to the development of a dominant regime of gendered sexualities defined by a binary gender mapping of desire as heterosexual homosexual or bisexual Alan Sears is Professor of Sociology at Toronto Metropolitan University He is an activist and author of several books including The Next New Left

Kinship in the Fiction of N. K.

Jemisin Berit Åström, Jenny Bonnevier, 2023-01-24 Kinship in the Fiction of N K Jemisin Relations of Power and Resistance examines the work of N K Jemisin through the lens of critical kinship studies In a world increasingly suffering the effects of climate change currently undergoing a sixth mass extinction and where anti-democratic racist and misogynist movements are gaining ground in many societies there is an urgent need to re-imagine our most intimate relations and the webs of kinship that form our societies but also connect us to the more than human world The essays in this collection shed new light on the

ways in which Jemisin's fiction does such re-imaginative work and explores both the contemporary moment and the potential for a future that is other than our present **Tatler**, 1917 [Visual Dysfunction in Schizophrenia: A View into the Mechanisms of Madness?](#) Randolph Blake, Steven Silverstein, Brian P. Keane, Michael Green, Szabolcs Kéri, 2015-05-11

Research on visual perception in schizophrenia has a long history. However, it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development. e.g. the NIMH CNTRICS and RDoC initiatives. Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well-studied replicable low-level examples. Importantly, far from being a passive sensory registration process, visual perception is active, inferential, and hypothesis-generating, and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia. Despite progress made in understanding visual processing disturbances in schizophrenia, many challenges exist, and many unexplored areas are in need of examination. For example, the directional relationships between perceptual and cognitive disturbances, e.g. in attention, memory, executive function, predictive coding, remain unclear in many cases, as do links with symptoms including visual hallucinations. The effect of specific visual disturbances on multisensory integration in schizophrenia has also not been explored. In addition, few studies of vision in schizophrenia have used naturalistic stimuli including real-world objects, and almost no studies have examined processing during interaction with objects or visual exploration, which can provide important data on functioning of the perception-for-action pathway. Relatedly, studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristic of many real-world situations, and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition. An additional important area involves treatment of visual disturbances in schizophrenia. Two major questions regarding this are: 1) can visual processing be improved in cases where it is impaired, and by what types of interventions affecting which cognitive and neurobiological mechanisms; and 2) what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia. Other important and understudied questions concern: 1) the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse, treatment response, and/or recovery; 2) the potential role of visual functioning in diagnosing and predicting illness; 3) the extent to which some visual perception disturbances are diagnostically specific to schizophrenia; and 4) the extent to which visual disturbances are truly manifestations of disease, as opposed to aspects of normal variation that, in combination with disease, serves to modify the clinical presentation. This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research. We include papers that span the entire range of different Frontiers paper types, including those that are data-driven using psychophysics.
