Handbook of Neuro-Oncology Neuroimaging Herbert B. Newton, 2007-11-28 Although the field of Neuro Oncology has grown considerably in the last 10 to 15 years and has a rather extensive literature, there are no comprehensive single source books that summarize the current literature and future trends of neuroimaging in neuro oncology. This book covers this topic in more comprehensive fashion, making it an important addition to the armamentarium of physicians that care for patients with brain tumors and other neuro oncological disorders. Well founded in basic science, it includes chapters that provide an overview of relevant background material in critical areas such as physics, contrast agents, ultra high field brain MRI and molecular imaging.

Imaging of Bone Tumors and Tumor-Like Lesions A. Mark Davies, Murali Sundaram, Steven J. James, 2009-08-21 Detection and characterization of bone tumors with imaging remains a big challenge for every radiologist notwithstanding the impressive progress achieved by the introduction of several new imaging modalities. Moreover, new concepts in surgical and oncological treatment of these lesions require from the radiologist appropriate and focused answers to the specific questions asked by the referring physicians in order to choose the best therapeutic approach for the individual patient. This comprehensive textbook describes in detail the possibilities and limits of all modalities including MRI, CT, nuclear medicine and interventional radiological procedures employed for the modern imaging of tumoral and tumor like lesions of bone. Their role in the diagnosis, surgical staging, biopsy and assessment of response to therapy is discussed in detail, covering all tumor subtypes as well as their specific anatomical location. Well selected and technically impeccable illustrations strongly enhance the didactic value of this work. I am very much indebted and grateful to the three editors: A. Mark Davies, Murali Sundaram and Steven L. J. James, world authorities in musculoskeletal radiology, for their superb scientific achievement in preparing and editing this wonderful volume as well as for their individual chapters. I would also like to thank the large international group of collaborating authors who are also widely acknowledged for their specific expertise in the area of bone tumors for their outstanding contributions.
