The Aeronautical Journal ,1999 **Scientific and Technical Books and Serials in Print** ,1989 Books in Print ,1981 **Analog Computing** Bernd Ulmann,2022-11-07 Analog computing is one of the main pillars of Unconventional Computing Almost forgotten for decades we now see an ever increasing interest in electronic analog computing because it offers a path to high performance and highly energy efficient computing These characteristics are of great importance in a world where vast amounts of electric energy are consumed by today s computer systems Analog computing can deliver efficient solutions to many computing problems ranging from general purpose analog computation to specialised systems like analog artificial neural networks The book Analog Computing has established itself over the past decade as the standard textbook on the subject and has been substantially extended in this second edition which includes more than 300 additional bibliographical entries and has been expanded in many areas to include much greater detail These enhancements will confirm this book s status as the leading work in the field It covers the history of analog computing from the Antikythera Mechanism to recent electronic analog computers and uses a wide variety of worked examples to provide a comprehensive introduction to programming analog computers It also describes hybrid computers digital differential analysers the simulation of analog computers stochastic computers and provides a comprehensive treatment of classic and current analog computer applications The last chapter looks into the promising future of analog computing *The Publishers' Trade List Annual* ,1985 **Optimal Estimation of Dynamic Systems** John L. Crassidis,John L. Junkins,2004-04-27 Most newcomers to the field of linear stochastic estimation go through a difficult process in understanding and applying the theory This book minimizes the process while introducing the fundamentals of optimal estimation Optimal Estimation of Dynamic Systems explores topics that are important in the field of control where the signals receive *Spaceflight Mechanics 1995* ,1995 *Journal of Guidance, Control, and Dynamics* ,2007 Spaceflight Mechanics ,1995 **Distributed Space Missions for Earth System Monitoring** Marco D&'Errico,2012-09-13 This title analyzes distributed Earth observation missions from different perspectives In particular the issues arising when the payloads are distributed on different satellites are considered from both the theoretical and practical points of view Moreover the problems of designing measuring and controlling relative trajectories are thoroughly presented in relation to theory and applicable technologies Then the technological challenges to design satellites able to support such missions are tackled An ample and detailed description of missions and studies complements the book subject *New Trends and Challenges in Optimization Theory Applied to Space Engineering* Piermarco Cannarsa,Alessandra Celletti,Giorgio Fasano,Leonardo Mazzini,Mauro Pontani,Emmanuel Trélat,2025-08-30 The book consists of the proceedings of the workshop New Trends and Challenges in Optimization Theory Applied to Space Engineering held in l Aquila Italy and organized by the Gran Sasso Science Institute GSSI on December 13 15 2023 The main purpose of the book is to provide an overview of the most important current topics concerning optimal control in space

Optimal control theory is an exciting research area where both new theoretical approaches and application problems come into play. The New Trends and Challenges in Optimization Theory Applied to Space Engineering conference brought together influential academic researchers and experts from industry and government to build bridges between their respective groups. The topics of the conference panels are selected to include the most advanced areas of interest for space applications. In line with the mission of the Gran Sasso Tech Foundation, interdisciplinary dialogue is promoted between the sciences and different experts are encouraged to work together to identify new problems and generate new solutions. Covering a wide range of space related topics and challenges, this conference aims to lay the foundation for a long term collaboration between different groups of experts. A broad overview of control theory applications in space is presented, highlighting the most recent aspects both from a theoretical and practical point of view, in particular on the following topics: manifold dynamics, trajectory design and related control aspects, AI techniques in guidance control problems and space missions, optimization techniques for constellations with applications to space operations, multi stage control problems for launch and landing problems, optimal control problems in the presence of uncertain parameters, improved sufficient and necessary conditions in optimal control problems for space problems. New methods, specific mathematical models, ad hoc algorithms and heuristics, innovative mission scenarios and advances in classical control theory are presented.

Grid-based Nonlinear Estimation and Its Applications Bin Jia, Ming Xin, 2019-04-25. Grid based Nonlinear Estimation and its Applications presents new Bayesian nonlinear estimation techniques developed in the last two decades. Grid based estimation techniques are based on efficient and precise numerical integration rules to improve performance of the traditional Kalman filtering based estimation for nonlinear and uncertainty dynamic systems. The unscented Kalman filter, Gauss Hermite quadrature filter, cubature Kalman filter, sparse grid quadrature filter, and many other numerical grid based filtering techniques have been introduced and compared in this book. Theoretical analysis and numerical simulations are provided to show the relationships and distinct features of different estimation techniques. To assist the exposition of the filtering concept, a preliminary mathematical review is provided. In addition, rather than merely considering the single sensor estimation, multiple sensor estimation, including the centralized and decentralized estimation, is included. Different decentralized estimation strategies, including consensus diffusion and covariance intersection, are investigated. Diverse engineering applications, such as uncertainty propagation, target tracking, guidance, navigation, and control, are presented to illustrate the performance of different grid based estimation techniques.

Satellite Equivalence Orbits Ernst Friedrich Maria Jochim, 2024-12-04. This book presents the essential characteristics of the different satellite motions. Satellite motions can be classified as anomalistic, draconitic, tropical, Hansen, Kepler, meridional, Sun synodical, Moon synodical motion, depending on the relevant reference point. When two of these types of motions, in some cases even more than two, are coupled

satellite orbits are obtained which are called equivalence orbits in this book They share the special properties of the different coupled motions and are therefore of particular interest in the selection of special satellite orbits In the book the author calculates mean equivalence orbits with secular perturbation formulas as well as true equivalence orbits considering a complete orbit model including periodic motion effects Some of the equivalence orbits can be determined unambiguously and with extremely high accuracy they are stable in the long term Others can only be found with low accuracy and reduced stability The author investigates all possible combinations and the associated general equations of condition are derived in each case Some well known families of satellite orbits such as the Sun synchronous orbits can be interpreted as mean equivalence orbits The study of their stability is of great interest in orbit mechanics Special applications and numerous numerical examples graphical representations of all possible ranges of the Kepler elements and detailed studies of the stability of particularly important equivalence orbits are carried out using the Brouwer orbit model as well as the modification by Eckstein This lays the foundation for possible refinements using arbitrary extended orbital models and for possibly required orbital corrections Numerous problems are to deepen the treated topics and or to stimulate for further investigations The book will be of interest to Astrodynamics and Aerospace Engineers as well as graduate students studying satellite orbits
