

# SPLIT TYPE ROOM AIR CONDITIONER INSTALLATION MANUAL (PART NO. 9312853014-01)

## This air conditioner uses new refrigerant R410A.

The basic installation work procedures are the same as conventional refrigerant (R22) models. However, pay careful attention to the following points:

- Since the working pressure is 1.6 times higher than that of conventional refrigerant(R22) models, some of the piping and installation and service tools are special (see the table below). Especially, when replacing a conventional refrigerant(R22) model with a new refrigerant R410A model, always replace the conventional piping and flare nuts with the R410A piping and flare nuts.
- Models that use refrigerant R410A have a different charging port thread diameter to prevent erroneous charging with conventional refrigerant(R22) and for safety. Therefore, check beforehand (The charging port thread diameter for R410A is 1/2 threads per inch.)
- Be more careful than foreign matter (oil, water, etc.) does not enter the piping when with refrigerant(R22) models. Also, confirm starting the piping accurately (avoid the opening by pinching, tapping, etc.).
- When charging the refrigerant, take into account the slight change in the composition of the gas and liquid phases, and always charge from the liquid phase side where composition is stable.

### Special tools for R410A

Tool name	Contents of change
Charge manifold	Pressure is high and cannot be measured with a conventional gauge. To prevent erroneous charging of other refrigerants, the diameter of each pipe that is used should be 1/2 inch. It is recommended that gauge with scale 0.1 to 1.0 MPa is 1/2 to 3/4 inch for high pressure, 1/2 to 1.0 MPa is 1/2 to 3/4 inch for low pressure.
Charge hose	To increase pressure resistance, the hose material and hose size were changed.
Vacuum pump	A conventional vacuum pump can be used by installing a vacuum pump adapter.
Gas leakage detector	Special gas leakage detector for R410A refrigerant R410A.

### Copper pipes

It is necessary to use seamless copper pipes and it is stipulated that the amount of residual oil is less than 40 mg/kg. The oil rate in copper pipes having a longitudinal, flattened or discolored portion (especially on the internal surface). Other than, the expansion valve or capillary tube may become blocked with condensed oil.

As an air conditioner using R410A (superpressure) higher than when using R22, it is necessary to choose adequate material.

Thickness of copper pipes used with R410A are as shown in Table 1. However, copper pipes thicker than 5.0mm were when it is available in the market.

### WARNING

- Do not use the existing (for R22) piping and flare nuts.
  - When existing materials are used, the pressure inside the refrigerant cycle will rise and cause breakage, injury, etc. (see the special for R410A materials.)
- When installing and servicing the air conditioner, do not mix gas other than the specified refrigerant(R410A) to enter the refrigerant cycle.
  - When an oil/gas mixture (the refrigerant cycle) the pressure inside the cycle will rise to an abnormally high value and cause breakage, injury, etc.

Table 1 Thickness of Seamless Copper Pipes

Refrigerant		Thickness (mm)	
Refrigerant	Thickness (mm)	Refrigerant	Thickness (mm)
