LEON DĂNĂILĂ Functional Neuroanatomy of the Brain

"I have faith that God helps the sick through me. God gave me a brain, He gave me hands, He gave me reason and I have to use them for the good of mankind. For the sick, poor things, I did everything for them..."

LEON DĂNĂILĂ

Also called the "Brain sculptor", appearing alongside Einstein among the 500 geniuses of the 20th century and one of the top 5000 personalities of the world, Academician Professor Doctor Leon Dănăilă is a famous neurosurgeon, considered the best in Europe, renowned and recognized at international level. Living as an ascetic and learning as a perpetual student, he gives lives and asks nothing in return. The professional activity of Professor Leon Dănăilă can be also translated in figures, many figures. For about half a century, his hand has performed over 40,000 surgeries in the country and abroad, rendering his fellow men new chance at life, rebuilding their body but also their soul. Convinced that "Talk moves the others" and "Your mission is to discover God's creation", Prof. Leon Dănăilă describes himself the legend of his life is a prayer-poem that defines his existence:

"I have asked the Lord to give me strength / He gave me hardships that have made me stronger / I asked for wisdom / And He gave me problems that I had to solve / I asked for a rise / And He gave me a thoughtful brain and physical power to work / I asked for courage / And God gave me dangers that I had to face / I failed to be able to love / And the Good Lord gave me people in pain that I could help / He gave me nothing of what I asked for / But He gave me everything I needed / My prayer has been heard".

Magnetic resonance imaging of disturbed brain connectivity in psychiatric illness Alex Fornito, Ben Harrison, The widespread application of brain imaging to the study of psychiatric disorders has led to a revolution in our understanding of the neural basis of psychiatric illness In particular the advent of magnetic resonance imaging MRI has provided an unprecedented capacity for quantifying diverse aspects of brain structure and function in vivo and has been used to identify brain changes associated with the full spectrum of psychopathology With respect to major psychiatric disorders it is now abundantly clear from this literature that focal brain dysfunction is rare Rather most disorders are associated with abnormalities in large scale networks of spatially distributed and interconnected brain regions i e they are disorders of brain connectivity Such considerations highlight the need to understand brain dysfunction in psychiatric illness from a network based perspective This goal is starting to be realized through recent advances in the use of MRI to map the brain s complex connectivity architecture In this special edition we invite contributions that address brain network dysfunction in psychiatric illnesses Specifically the work must be concerned with understanding interactions between brain regions and how their alterations are affected by psychiatric disease These interactions can be studied at the level of anatomy using diffusion MRI or function using functional MRI fMRI with the full range of methods available e g tractography seed based correlations independent component analysis graph analysis dynamic causal modeling etc Contributions can be either reviews of recent relevant literature addressing brain network dysfunction in psychiatric disease or experimental papers describing novel insights into brain network disturbances in such illnesses Contributions will be invited covering a broad spectrum of psychiatric disease including mood and anxiety disorders schizophrenia autism attention deficit hyperactivity disorder and neurodegenerative conditions It is intended that this volume will provide important insights into how brain networks are perturbed by psychiatric disease and allow identification of commonalities and differences across diagnostic categories

Neuropsychodynamic Psychiatry Heinz Boeker, Peter Hartwich, Georg Northoff, 2018-10-11 This book presents a comprehensive neuropsychodynamic strategy for treating psychiatric disorders Rather than pursuing an exclusively biological psychological or psychodynamic approach it offers a methodology that links all three aspects in a unifying integrative model Central to this approach is the view of the brain as a bio psychosocial organ in a neuro ecological model rather than the purely neuronal model often presupposed in current neuroscience and psychiatry Moreover the book views psychopathological symptoms as spatiotemporal disorders of the altered spatiotemporal structure spanning the brain and its surrounding world The relation between one of the core symptoms and altered neuronal activity calls for the development of integrated circular neuropsychodynamic models of psychopathological symptoms in severe psychiatric disorders and their treatment
