**From Databases to Hypermedia** Hermann Maurer, Nick Scherbakov, Zahran Halim, Zaidah Razak, 2012-12-06 The number of books on databases is very large Thus our decision to yet add another book to the body of literature requires some justification However even a cursory glance through this book will show that we have taken a rather different approach indeed when compared to monographs on databases First material ties together the well known relational model with the newer and not yet as solidly established object oriented one and leads to data models for hypermedia system This is unique and timely the chaos on the World Wide Web is getting out of hand and one of the main reasons is that the underlying data model is too weak Second the book is full of illustrations And those illustrations are not only available in printed form but also on a CD ROM Actually much more is true for each of the 26 chapters electronic courseware is available one lesson per chapter Third the lessons described contain explanations that are easier or better to understand than those provided in the printed chapter since a number of dynamic and interactive features are used Fourth the lessons can be used in a variety of modes as complement for the book as stand alone material instead of the book as slides for the lecturer and as help for the student And as explained below they can be easily modified
