**Ethical Know-How** Francisco J. Varela, 1999 How can science be brought to connect with experience This book addresses two of the most challenging problems facing contemporary neurobiology and cognitive science understanding how we unconsciously execute habitual actions as a result of neurological and cognitive processes and creating an ethic adequate to our present awareness that there is no such thing as a transcendental self a stable subject or a soul

**Environmental Dilemmas** Robert Mugerauer, Lynne Manzo, 2008-01-01 Environmental Dilemmas focuses on the ethical problems and dilemmas that emerge in place based professional practices\_ architecture landscape architecture planning engineering and construction management Mugerauer and Manzo connect decision making to major ethical theories principles and rules and professional codes of ethics

**Bootstrapping** Thierry Bardini, 2000-12-01 Bootstrapping analyzes the genesis of personal computing from both technological and social perspectives through a close study of the pathbreaking work of one researcher Douglas Engelbart In his lab at the Stanford Research Institute in the 1960s Engelbart along with a small team of researchers developed some of the cornerstones of personal computing as we know it including the mouse the windowed user interface and hypertext Today all these technologies are well known even taken for granted but the assumptions and motivations behind their invention are not Bootstrapping establishes Douglas Engelbart s contribution through a detailed history of both the material and the symbolic constitution of his system s human computer interface in the context of the computer research community in the United States in the 1960s and 1970s Engelbart felt that the complexity of many of the world s problems was becoming overwhelming and the time for solving these problems was becoming shorter and shorter What was needed he determined was a system that would augment human intelligence co transforming or co evolving both humans and the machines they use He sought a systematic way to think and organize this coevolution in an effort to discover a path on which a radical technological improvement could lead to a radical improvement in how to make people work effectively What was involved in Engelbart s project was not just the invention of a computerized system that would enable humans acting together to manage complexity but the invention of a new kind of human the user What he ultimately envisioned was a bootstrapping process by which those who actually invented the hardware and software of this new system would simultaneously reinvent the human in a new form The book also offers a careful narrative of the collapse of Engelbart s laboratory at Stanford Research Institute and the further translation of Engelbart s vision It shows that Engelbart s ultimate goal of coevolution came to be translated in terms of technological progress and human adaptation to supposedly user friendly technologies At a time of the massive diffusion of the World Wide Web Bootstrapping recalls the early experiments and original ideals that led to today s information revolution

**Chaos, Complexity, Curriculum and Culture** William E. Doll, M. Jayne Fleener, John St. Julien, 2005 Although the fields of chaos and complexity are important in a

number of disciplines they have not yet been influential in education This book remedies this dilemma by gathering essays by authors from around the world who have studied and applied chaos and complexity theories to their teaching Rich in its material recursive in its interweaving of themes conversational in its relationships and rigorous in its analysis the book is essential reading for undergraduates graduate students and professionals who deal with these important topics

**From Energy to Information** Bruce Clarke, Linda Dalrymple Henderson, 2002 This book offers an innovative examination of the interactions of science and technology art and literature in the nineteenth and twentieth centuries Scholars in the history of art literature architecture computer science and media studies focus on five historical themes in the transition from energy to information thermodynamics electromagnetism inscription information theory and virtuality Different disciplines are grouped around specific moments in the history of science and technology in order to sample the modes of representation invented or adapted by each field in response to newly developed scientific concepts and models By placing literary fictions and the plastic arts in relation to the transition from the era of energy to the information age this collection of essays discovers unexpected resonances among concepts and materials not previously brought into juxtaposition In particular it demonstrates the crucial centrality of the theme of energy in modernist discourse Overall the volume develops the scientific and technological side of the shift from modernism to postmodernism in terms of the conceptual crossover from energy to information The contributors are Christoph Asendorf Ian F A Bell Robert Brain Bruce Clarke Charlotte Douglas N Katherine Hayes Linda Dalrymple Henderson Bruce J Hunt Douglas Kahn Timothy Lenoir W J T Mitchell Marcos Novak Edward Shanken Richard Schiff David Tomas Sha Xin Wei and Norton Wise

**Studying Those Who Study Us** Diana Forsythe, 2001 Diana E Forsythe was a leading anthropologist of science technology and work who pioneered the field of the anthropology of artificial intelligence This volume collects her best known essays along with other major works that remained unpublished upon her death in 1997 It is also an exemplar of how reflexive ethnography should be done

**Who Wrote the Book of Life?** Lily E. Kay, 2000 This is a detailed history of one of the most important and dramatic episodes in modern science recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature heredity and society Drawing on archives published sources and interviews the author situates work on the genetic code 1953 70 within the history of life science the rise of communication technosciences cybernetics information theory and computers the intersection of molecular biology with cryptanalysis and linguistics and the social history of postwar Europe and the United States Kay draws out the historical specificity in the process by which the central biological problem of DNA based protein synthesis came to be metaphorically represented as an information code and a writing technology and consequently as a book of life This molecular writing and reading is part of the cultural production of the Nuclear Age its power amplified by the centuries old theistic resonance of the book of life metaphor Yet as the author points out these are just metaphors analogies not ontologies Necessary and productive as they have been they have their epistemological

limitations Deploying analyses of language cryptology and information theory the author persuasively argues that technically speaking the genetic code is not a code DNA is not a language and the genome is not an information system objections voiced by experts as early as the 1950s Thus her historical reconstruction and analyses also serve as a critique of the new genomic biopower Genomic textuality has become a fact of life a metaphor literalized she claims as human genome projects promise new levels of control over life through the meta level of information control of the word the DNA sequences and its editing and rewriting But the author shows how the humbling limits of these scriptural metaphors also pose a challenge to the textual and material mastery of the genomic book of life

**Mathematics as Sign** Brian Rotman,2000 In this book Rotman argues that mathematics is a vast and unique man made imagination machine controlled by writing It addresses both aspects mental and linguistic of this machine The essays in this volume offer an insight into Rotman s project one that has been called one of the most original and important recent contributions to the philosophy of mathematics

*Education, Learning and the Transformation of Development* Amy Skinner, Matt Baillie Smith, Eleanor Brown, Tobias Troll, 2016-07-15 Whilst education has been widely recognised as a key tool for development this has tended to be limited to the incremental changes that education can bring about within a given development paradigm as opposed to its role in challenging dominant conceptions and practices of development and creating alternatives Through a collection of insightful and provocative chapters this book will examine the role of learning in shaping new discourses and practices of development By drawing on contributions from activists researchers education and development practitioners from around the world this book situates learning within the wider political and cultural economies of development It critically explores if and how learning can shape processes of societal transformation and consequently a new language and practice of development This includes offering critical accounts of popular informal and non formal learning processes as well as the contribution of indigenous knowledges in providing spaces for the co production of knowledge thinking and action on development and in terms of shaping the ways in which citizens engage with and create new understandings of development itself This book makes an important and original contribution by reframing educational

practices and processes in relation to broader global struggles for justice voice and development in a rapidly changing development landscape

**Managing Creativity** José-Rodrigo Córdoba-Pachón, 2018-12-07 For over a century creativity has unfolded as a valuable field of knowledge Emerging from disciplines like psychology management and education the field of creativity is making strides in others including the arts and engineering Research and education in this field helped it establish an identity as evidenced by a growing number of courses and specialised journals However this progress has come with a price In a domain like management institutionalisation of creativity in learning research and practice has left creativity subordinated to concerns with standardisation employability and economic growth Values like personal fulfilment uncertainty improvement and connectedness which could characterise systemic views on creativity need to be rescued to promote more and inclusive dialogue between creativity stakeholders The author aims to recover the importance of creativity as a systemic phenomenon and explores how applied systems thinking or AST can further support creativity This demonstrates how creative efforts could be directed to improve quality of life for individuals as well as their environments The book uses the systems idea as an enquiring device to bring together different actors to promote reflection and action about creative possibilities The chapters offer conceptualisations applications and reflections of systems ideas to help readers make sense of the field of creativity in academia and elsewhere Complemented by the author's own personal conceptual and practical journey the insights of the book will act as a vital toolkit for management researchers career driven students practitioners and all creators to define and pursue creative ideas and thrive through their journeys to benefit themselves other people and organisations
