Eu Energy Security In The Gas Sector:

EU Energy Security in the Gas Sector Filippou Proedrou, 2016-04-22 This book fills an important gap in the literature on energy security in the gas sector in the European Union Whilst the emphasis is often on energy security in the oil sector the gas sector has grown in importance in recent decades with increasing liberalization raising critical questions for the security of gas supplies The share of gas in Europe's energy mix is rising and the differences between the politics and economics of gas and oil supply are becoming more pronounced The author sheds light on the state of EU energy security in the gas sector its interdependence with external suppliers and the current gas strategy He examines the role of energy companies EU member states and EU institutions locates the main developments in the gas sector and focuses on the principal challenges posed by such fundamental changes The author scrutinizes the EU's relations with its main gas supplier Russia as well as with alternative suppliers elaborates on the key infrastructure projects on the table and their principal ramifications and discusses the main policies that member states pursue to achieve energy security as well as the EU's internal contradictions The book concludes with policy recommendations particularly in the light of tougher environmental regulation

EU Gas Security Architecture Elina Brutschin, 2017-01-23 This study traces the activities of the European Commission in the natural gas sector from 1990 to 2016 by concentrating on market liberalisation and infrastructure development as the main pillars of the European gas security architecture By building on previous literature the Commission's policymaking is analysed along its formal and informal powers in different energy security environments In order to get a better understanding of the European energy market context the reader is introduced into the historical development of the European energy policy in Chapter 2 and the literature on the European Union policymaking in Chapter 3 The analysis of the Commission's activities in the liberalisation Chapter 4 and infrastructure Chapter 5 sectors suggests that the Commission

was able to effectively utilise networked governance during times when the demand for coordinated energy policies was low This book will be of particular interest to those in the field of energy policies as well as EU policymaking

Energy Security and Natural Gas Markets in Europe Tim Boersma, 2015-08-27 Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers this book presents the history of European policy making regarding energy resources including recent controversies about shale gas and fracking Using the United States as a benchmark the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states This lack of integration still prohibits natural gas to flow freely throughout the continent which makes parts of Europe vulnerable in case of supply disruptions The book demonstrates that the EU gas market has been developing at different speeds leaving the Northwest of the continent reasonably well integrated with sufficient trade and liquidity and different supplies whereas other parts are less developed In these parts of Europe there is a structural lack of investments in infrastructure interconnectors reverse flow options and storage facilities Thus even though substantial progress has been made in parts of the EU single source dependency often prevails leaving the relevant member states vulnerable to market power abuse Detailed comparisons are made of the situations in the Netherlands and Poland and of energy policy in the USA The book dismantles some of the existing assumptions about the concept of energy security and touches upon the level of rhetoric that features in most energy security and policy debates in Europe

The New Politics of Energy Security in the European Union and Beyond Andrea Prontera, 2017-05-18 Combining theoretical reflections and empirical insights from paradigmatic case studies in the area of external energy governance pipeline politics Liquefied Natural Gas development and offshore petroleum policy and politics this ground breaking study demonstrates that a distinctive and new politics of energy security is definitively emerging in the European Union Innovative not only in regard to the case studies presented which include the Caspian region the Baltic Mediterranean countries Central Asia and EU Russia relations but also in regard to the analytical framework adopted an International Political Economy approach informed by an historical institutional perspective the book challenges the common view of the de politicisation of energy security supported by the mainstream market approach and the power politics and zero sum game view supported by the geopolitical perspective This book places the study of EU energy politics in the broader evolving context of global energy markets and explores the complex interactions between EU and national political dynamics and between energy security and environmental concerns at the local level

European Energy Security: What Should it Mean? What to Do? ,2006 Tackling the multifaceted theme of the security of EU energy supplies this ESF Working Paper contains highly topical and authoritative contributions by four main authors From the point of view of EU policy Christian Egenhofer considers the issues involved in Integrating Security of Supply Market

Liberalisation and Climate Change with reference to the European Commission's 2006 Green Paper on energy. Elaborating on supply relations with Russia and Eastern Europe. Leonid Grigoriev presents Growth and Growth with Energy. Vladimir Socor examines options for diversification in the Caspian Black Sea Region. Key to Diversifying Europe's Energy Supplies. Alan Riley takes a critical look at the role of energy market liberalisation in enhancing energy security and its lack of progress in the EU in Energy Security. Gas Market Liberalisation and Our Energy Relationship with Russia. Finally the paper benefits from a substantial summing up by Francois Heisbourg.

Low-carbon Energy Security from a European Perspective Patrizia Lombardi, Max Gruenig, 2016-06-08. Low Carbon Energy Security from a European Perspective draws on the European Commission's funded project MILESECURE 2050. It considers low carbon energy security and energy geopolitics in Europe with a focus on four thematic clusters challenging the energy security paradigm: climate change and energy security objectives, the components of a secure and low carbon energy system, energy security in a geopolitical perspective as it relates to economics, resource competition and availability, and the influence of large scale renewable energy projects on energy security and shifting geopolitical alliances. An overarching narrative is that optimizing the energy system simultaneously across different objectives may be impossible, i.e. lowest cost, least environmental impact, minimal downtime, regional supply. This book explores these charged topics through insights from a series of novel new energy project case studies and demonstrates the need for difficult political conversations within Europe and beyond by posing fundamental yet new questions about the energy security paradigm. Offers a unique perspective on low carbon energy security by considering the assumptions behind current energy security needs. Suggests the benefit of envisioning energy security through out of the box scenario development with respect to the energy system. Includes energy in an international scenario with case studies from Africa, Russia, Ukraine, Morocco, China, South America and Europe. Draws on the European Commission's funded project MILESECURE 2050.

Long-term Energy Security Risks for Europe Arianna Checchi, Arno Behrens, Christian Egenhofer, 2009. The aim of the paper is to identify and evaluate existing and potential EU energy supply risks on the basis of a sector specific approach. Moving away from common generalisations on security of energy supply as well as from those studies that focus only on one sector, it brings together all types of fuel and analyses the risks related to each of them. The result is a comprehensive picture of the energy security challenges faced by the EU in the long term. The paper can be seen as a tool to avoid overlapping incoherence and contradictions in the process of assessing security of supply and aims to formulate a consistent and more unified European energy policy.

Eurasian Energy Security Jeffrey Mankoff, 2009. This Council Special Report explores the challenges faced by consumer and supplier alike in Europe and Eurasia. It looks at Russia's rise as an energy power, analyzing its control of supplies and delivery systems and its investments in energy infrastructure across Europe as well as questions about the potential of its production. The report also examines Europe's difficulties in forging a common policy on energy supply and recommends a two pronged strategy of integration and diversification. It urges

Europe to integrate both internally developing a single EU gas market and externally tying Russia's energy sector to Europe and its more transparent regulations. It also recommends that Europe seek new sources of energy from both non-Russian suppliers and non-fossil fuels.

International Networks, Advocacy and EU Energy Policy-Making Alexandra-Maria Bocse, 2020-10-16 This book explores the role which policy networks and particularly advocacy coalitions play in EU energy policy and the factors that account for their policy success. It captures the often neglected interaction between public and private actors in EU energy security policy and between opposing advocacy coalitions. The volume's case studies examine coalitions working on two issues central to EU energy policy debates over the last decade: fracking for shale gas and developing the Southern Gas Corridor, a pipeline system linking Europe with the gas region of the Caspian Sea. Although the coalitions studied are focused on impacting EU energy policy, they stretch beyond the EU borders. The book draws on original, rich and intriguing data around 90 interviews with energy stakeholders and over six months of fieldwork and participant observation, analysed through an innovative combination of frame analysis and social network analysis.

European Energy Security Nataliya Esakova, 2013-01-24 Nataliya Esakova performs an analysis of the interdependencies and the nature of cooperation between energy-producing, consuming and transit countries, focusing on the gas sector. For the analysis, the theoretical framework of the interdependence theory by Robert O. Keohane and Joseph S. Nye and the international regime theory are applied to the recent developments within the gas relationship between the European Union and Russia in the last decade. The objective of the analysis is to determine whether a fundamental regime change in terms of international regime theory is taking place and if so, which regime change explanation model in terms of interdependence theory is likely to apply.

Beyond the EU Regulatory State Andrea Prontera, 2019-08-16 The EU's growing dependence on natural gas and Russian resources for energy security has become a hot discussion topic in academia and in policy circles in Brussels, Washington and many European capitals. However, most of the books on the subject use a very descriptive and/or normative approach, and very few attempt to theorise EU energy security outside of mainstream conceptualisations of the EU as an international actor. This book closes an important gap in the literature and offers a fresh perspective on EU energy studies, and it will be an important contribution to the debate on the development of European integration and the EU's role in international relations in the wake of the crisis in EU politics and in light of the EU's increasingly complex external environment. Due to its interdisciplinary features, the book combines EU studies, international affairs, political economy and energy studies, and the topics covered in this book will be of special interest to scholars of the international political economy of energy and to those interested in European politics and EU international relations.

Policy-making in the European Union Helen S. Wallace, Mark A. Pollack, Alasdair R. Young, 2010 The policies of the European Union profoundly affect the lives of people in Europe and around the world. The new edition of this highly successful textbook outlines how and why such decisions are made, as well as the key challenges faced by policy makers in the current political and economic climate. Policy

Making in the European Union begins by clarifying the institutional framework of the EU and the analytical approaches used to understand it. A wide range of crucial and illustrative policies are then explored in detail by subject experts. This volume includes new chapters on ways of analyzing the EU's policy process and on energy policy. A central theme to the volume is how the recent expansion to twenty-seven member states has affected policy making across the different policy sectors. The conclusion reflects on how this challenge and the protracted constitutional stalemate have affected policy making in the EU. It also explores the impact of the financial and economic crises that have struck Europe over the past several years. The sixth edition is fully up to date and is the ideal text for all those with an interest in the policy making of the European Union.

Policy-making in the European Union Helen Wallace, Mark A. Pollack, Alasdair R. Young, 2015. The policies of the European Union profoundly affect the lives of people in Europe and around the world. The Southern Energy Corridor: Turkey's Role in European Energy Security Vedat Yorucu, Ozay Mehmet, 2017-10-03. This book highlights the importance of Turkey in diversifying supplies in future European energy security, focusing in particular on the rapidly emerging southern energy corridor. Turkey, by its location, occupies a key role in this corridor fed by hydrocarbon supplies from Russian, Caspian, east Mediterranean, and Arab sources. The book examines Turkey's role as a transit country in addition to its own growing domestic energy market and it utilizes the latest evidence on the geopolitics of various pipelines which converge on Turkey. The evidence, including maps, strongly favors Turkey as an energy hub within a regional energy model driven by rational behavior and market forces. The book recommends an increasing strategic energy cooperation between the EU and Turkey to maximize mutual interest.

Energy Security in Europe Kacper Szulecki, 2017-10-13. This edited collection highlights the different meanings that have been attached to the notion of energy security and how it is taken to refer to different objects. Official policy definitions of energy security are broadly similar across countries and emphasize the reliability and affordability of access to sufficient energy resources for a community to uphold its normal economic and social functions. However, perceptions of energy security vary between states, causing different actions to be taken both in international relations and in domestic politics. *Energy Security in Europe* moves the policy debates on energy security beyond a consideration of its seemingly objective nature. It also provides a series of contributions that shed light on the conditions under which similar material factors are met with very different energy security policies and divergent discourses across Europe. Furthermore, it problematizes established notions prevalent in energy security studies, such as whether energy security is geopolitical and an element of high politics or purely economic and should be left for the markets to regulate. This book will be of particular relevance to students and academics in the fields of energy studies and political science seeking to understand the divergence in perspectives and understandings of energy security challenges between EU member states and in multilateral relationships between the EU as

a whole **Energy Security Logics in Europe** Izabela Surwillo, 2019-05-07 This book analyzes energy security dynamics in Europe through the prism of security logics Drawing on the literature on securitization security logics and security contexts it scrutinizes energy security debates and policy developments in Germany Poland and Ukraine focusing on the pipeline politics nuclear energy and renewables sector The contextualized analysis accounts for the wider historical socio economic and cultural background from which energy policies emerge and gives a voice to the different stakeholders from policymakers to the local NGO sector The book sheds light on the root causes of different energy policy decisions and illustrates that European energy security is currently driven by four security logics war subsistence risk and emancipation The logic of emancipation is a newly emergent phenomenon embraced by many bottom up citizens initiatives and manifested in their drive to self reliance the rhetoric of liberation and local practices of energy production The conceptualization and analysis of the emancipatory logic vis vis other energy security logics help to explain European energy context most effectively with its background conditions emerging trends and often controversial national policy approaches This book will be of much interest to students of critical security studies energy policy and European politics in general **Poland's Energy Security in the Context of the EU's Common Energy Policy - The Case of the Gas Sector** Bartłomiej Nowak, Paweł Grzejszczak, 2013 The concept of energy security can be rather difficult to precisely define In fact the scope of energy security includes a somewhat different set of issues in the gas sector than in the electricity sector After all electricity can be produced in every country of the European Union but gas extraction is possible only in some Natural gas is a commodity which constitutes a significant component of the export policy of only a few countries As a result the scarcity of gas in the EU makes it a very desirable resource for many countries some of which are taking important energy related decisions without consulting or assessing their impact on other Member States This hampers the coordination of energy policy and the setting of common objectives with regard to energy security for the EU as a whole The lack of cooperation among Member States has a clearly more negative impact on Poland and the other new Member States which depend on a single gas supplier than on the old EU 15 whose gas supply is generally well diversified Moreover the lack of proper infrastructure and cross border connections puts in question the creation of a solid energy policy at the EU level in the gas sector **Soviet Energy Exports and Western European Energy Security** United States.
