Essentials Of Tissue Banking:

Essentials of Tissue Banking George Galea, 2010-08-25 This book provides a coherent and up to date review of the scientific and technical principles in routine tissue banking practices incorporating a plethora of new guidance and regulatory documents produced in response to recent regulation

Essentials of Tissue and Cells Banking George Galea, Marc Turner, Sharon Zahra, 2021-07-02 It has been 10 years since the first edition of Essentials of Tissue Banking has been published There is still relatively little published on the technical and scientific principles on routine tissue and cell banking based on scientific principles The 1st edition was very successful and after a 10 year gap there is a need of an update and an expansion of the book's remit The format of the book follows that of the previous edition split into 5 sections Management of donors and the banking of common tissues and cells Principles of storage and processing of tissues and cells Ensuring the safety of the products by testing the donor the tissues and the environment supported by a quality system and an IT infrastructure all working within the constraints of current regulatory and ethical environments This edition however provides a significant update Many the chapters have been completely rewritten by different experts Like the 1st edition they were given a free hand in the way they wrote their chapter with a guideline that they had to be concise clear and up to date The authors were also asked to provide the scientific and technical basis that provides the rationale of the processes they describe Also the scope of the book has been somewhat extended In view of the fact that many cellular therapies are now routinely practiced 2 new chapters have been added one on the banking of haematopoietic stem cells and one on human embryonic stem cells They have been deliberately chosen to illustrate the extreme spectrum of cellular therapies from one of the simplest to one of the most complex The intention of the book has remained the same to cover and update banking of current practices in essential tissue and cell banking It is therefore hoped that by keeping the book as concise and up to date as possible it will find a place on the shelves of many tissue establishments

Essential IVF Jonathan van Blerkom, Linda Gregory, 2011-06-28 There is no clearer testament to the importance and efficacy of in vitro fertilization in the treatment of the infertile patient than the fact that over one million babies have been born since its clinical introduction in 1978 The success of this worldwide endeavor has evolved to treat some

of the formerly most intractable forms of infertility and requires individuals with different skills and insights whose activities are often compartmentalized into clinical laboratory and research functions The intent of Essential IVF is to present current issues in clinical IVF that encompass the varied activities of those engaged in this enterprise By integrating clinical basic research and laboratory related aspects of human reproduction readers with diverse interests should obtain a more complete understanding of the impact importance and inter relatedness of each in the progress of infertility treatment and an appreciation of whether emerging technologies will or should contribute to this progress in the near future The topics selected for this volume include research that has begun to explain the origins of differential follicular gamete embryo and uterine competence and specific laboratory procedures and protocols that may have important clinical implications for the generation of developmentally viable embryos Human embryo research over the past 25 years has not only confirmed that the developmental potential of each embryo is unique but more importantly demonstrated how genetic and nongenetic factors for sperm and oocyte determine embryo competence well before fertilization Several chapters deal with the origins of normal and compromised gametes and how those with high competence can be identified and isolated for fertilization
