Rao,2019-04-30 After five decades the field of Statistical Hydrology continues to evolve and remains a very active area of investigation Researchers continue to examine various distributions methods of estimation of parameters and problems related to regionalization However much of this research appears in journals and reports and usually in a form not easily accessible to practitioners and students Flood Frequency Analysis answers this need by presenting the most popular and promising distributions and estimation procedures in a unified format It offers the details that provide the basis for the computations and illustrates each procedure with real data *Flood Hydrology for Dry Creek, Lake County, Northwestern Montana* Charles Parrett,2000 U.S. Geological Survey Professional Paper ,1984 **Scientific Investigations Report** ,2004 **Estimating the Exceedance Probabilities of Extreme Floods Using Stochastic Storm Transposition and Rainfall-runoff Modeling** Thomas Arthur Fontaine,1989 **Risk Analysis for Dam Safety Evaluation** Jerry R.
