Structural Engineering and Geomechanics - Volume 1 Sashi K. Kunnath, 2020-06-22 An understanding of dynamic effects on structures is critical to minimize losses from earthquakes and other hazards These three books provide an overview of essential topics in structural and geotechnical engineering with an additional focus on related topics in earthquake engineering to enable readers gain such an understanding One of the ultimate objectives of these books is to provide readers with insights into seismic analysis and design However in order to accomplish that objective background material on structural and geotechnical engineering is necessary Hence the first two sections of the book provide this background material followed by selected topics in earthquake engineering The material is organized into three major parts The first section covers topics in structural engineering Beginning with fundamental mechanics of materials the book includes chapters on linear and nonlinear analysis as well as topics on modeling of structures from different perspectives In addition to traditional design of structural systems introductions to important concepts in structural reliability and structural stability are discussed Also covered are subjects of recent interest viz blast and impact effects on structures as well as the use of fiber reinforced polymer composites in structural applications Given the growing interest in urban renewal an interesting chapter on restoration of historic cities is also included The second part of the book covers topics in geotechnical engineering covering both shallow and deep foundations and issues and procedures for geotechnical modeling The final part of the book focuses on earthquake engineering with emphasis on both structures and foundations Here again the material covered includes both traditional seismic design and innovative seismic protection And more importantly concepts in modeling for seismic analysis are highlighted

Seismic Behaviour and Design of Irregular and Complex Civil Structures IV Rita Bento, Mario De Stefano, Dietlinde Köber, Zbigniew Zembaty, 2022-01-18 This volume contains papers of the 9th European Workshop on the Seismic Behaviour of Irregular and Complex Structures 9EWICS held in Lisbon Portugal in 2020 This workshop organized at Instituto Superior Técnico University of Lisbon continued the successful three annual series of workshops started back in 1996 Its organization had the sponsorship of Working Group 8 Seismic Behaviour of Irregular and Complex Structures of the European Association of Earthquake Engineering This international event provided a platform for discussion and exchange of ideas and unveiled new insights on the possibilities and challenges of irregular and complex structures under seismic actions The topics addressed include criteria for regularity seismic design of irregular structures seismic assessment of irregular and complex structures retrofit of irregular and complex structures and soil structure interaction for irregular and complex structures Beyond an excellent number of interesting papers on these topics this volume includes the papers of the two invited lectures one devoted to irregularities in RC buildings including perspectives in current seismic design codes difficulties in their application and further research needs and another one dedicated to the challenging and very up to date topic in the area of seismic response of masonry building aggregates in historical centers

This volume includes 26 contributions from authors of 11 countries giving a complete and international view of the problem. The holds particular interest for all the community involved in the challenging task of seismic design assessment and or retrofit of irregular and complex structures Advanced Modelling Techniques in Structural Design Feng Fu, 2015-03-26

The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques. In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work. Advanced Modelling Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners. It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings earthquake progressive collapse fire blast and vibration analysis non linear geometric analysis and buckling analysis. Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Buji Khalifa Willis Towers Taipei 101 the Gherkin Millennium Bridge Millau viaduct and the Forth Bridge illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems.
