User's Guide for an Interactive Personal Computer Interface for the 1998 Aeroprediction Code (AP98) Thomas C. Hymer, Frankie Gale Moore, Cornell Downs, 1998 This report describes interactive user friendly pre processing and post processing personal computer P C modules designed to operate with the latest version of the Naval Surface Warfare Center NSWC Aeroprediction Code AP98 As part of the preprocessing input module geometry inputs are automated by giving the user many options By using this new software a set of aerodynamic coefficients can be obtained on most weapon configurations in less than 15 minutes from time of initial setup to computer outputs compared to 2 4 hours for the AP98 computer mainframe version While the computer cost savings are modest the AP98 executes on a large computer in less than a second the manpower savings and productivity enhancements can be significant Various plots of the aerodynamic coefficients are available to the user and are plotted automatically by the post processing module Data output is also made available to the user in the form of standard Aeroprediction output files as well as tabulated data The User's Guide is designed to aid users of the AP98 by correlating AP98 P C Interface Data Inputs and the corresponding source code variable names

Handbook of Task Analysis Procedures David H Jonassen,Wallace Hannum,Martin Tessmer,1989-06-26 Task Analysis is not only the most important component of Instructional Design but also the most often misconstrued and poorly executed Starting with this premise these authors have developed a complete reference and instructional text on Task Analysis The Handbook of Task Analysis Procedures fulfills three distinct purposes As an overview of the field it presents a comprehensive collection of functions techniques and tools that can be used in a variety of settings Thirty five different procedures are cataloged and described in individual chapters Providing flowcharts and examples it is organized to instruct the reader on how to perform these techniques Finally all chapters have been consistently structured making it an ideal reference book Handbook of Task Analysis Procedures is designed to help the reader select a specific task analysis technique for a particular situation Having done this the reader can then refer to the appropriate chapter for his chosen technique This chapter provides a statement of purpose an overview and applications It then presents a step by step description of how to use the procedure The chapter concludes with examples an evaluation and a complete set of references Designed to be used in education and by trainers in the business sector this volume is a unique reference book Part I provides an overview of Task Analysis and describes the variables that affect how task analysis is performed A decision table and discussion help the reader select specific techniques The techniques are grouped in Part II III and IV according to their functional similarity learning analysis job analysis content analysis Part V describes information gathering tools This Handbook is essential for the reader who believes that competent task analysis is a vital part of instructional design
