The History of Neuroscience in Autobiography Larry R. Squire, 2011-09-09 The seventh volume of *The History of Neuroscience in Autobiography* is a collection of autobiographical essays by distinguished senior neuroscientists in which they recount the events that shaped their lives and identify the mentors and colleagues who inspired them. The narratives provide a human dimension to the world of scientific research.

Comparative Vertebrate Neuroanatomy Ann B. Butler, William Hodos, 2005-09-02 *Comparative Vertebrate Neuroanatomy: Evolution and Adaptation* Second Edition Ann B. Butler and William Hodos. The Second Edition of this landmark text presents a broad survey of comparative vertebrate neuroanatomy at the introductory level, representing a unique contribution to the field of evolutionary neurobiology. It has been extensively revised and updated with substantially improved figures and diagrams that are used generously throughout the text. Through analysis of the variation in brain structure and function between major groups of vertebrates, readers can gain insight into the evolutionary history of the nervous system. The text is divided into three sections: Introduction to evolution and variation, including a survey of cell structure, embryological development, and anatomical organization of the central nervous system; phylogeny and diversity of brain structures; and an overview of various theories of brain evolution. Systematic comprehensive survey of comparative neuroanatomy across all major groups of vertebrates. Overview of vertebrate brain evolution which integrates the complete text, highlights diversity and common themes, broadens perspective by a comparison with brain structure and evolution of invertebrate brains, and considers recent data and theories of the evolutionary origin of the brain in the earliest vertebrates, including a recently proposed model of the origin of the brain in the earliest vertebrates that has received strong support from newly discovered fossil evidence. Ample material drawn from the latest research has been integrated into the text and highlighted in special feature boxes, including recent views on homology, cranial nerve organization and evolution, the relatively large and elaborate brains of birds in correlation with their complex cognitive abilities, and the current debate on forebrain evolution across reptiles, birds, and mammals. *Comparative Vertebrate Neuroanatomy* is geared to upper-level undergraduate and graduate students in neuroanatomy, but anyone interested in the anatomy of the nervous system and how it corresponds to the way that animals function in the world will find this text fascinating.

The Human Brain During the Late First Trimester Shirley A. Bayer, Joseph Altman, 2006-04-18 The fourth volume in the *Atlas of Human Central Nervous System Development* series, *The Human Brain During the Late First Trimester* provides new information about features of the perinatal brain. It deals with brain development during the late first trimester. GW11 GW7 5. The major theme of this volume is the identification of stretches and patches.
