

THE ENDOCRINE SYSTEM

The endocrine system, vital to homeostasis, plays an important role in regulating the activity of body cells. By acting through bloodborne chemical messengers, called hormones, the endocrine system organs orchestrate cellular changes that lead to growth and development, reproductive capability, and the physiological homeostasis of many body systems.

This chapter covers the location of the various endocrine organs in the body, the general function of the various hormones, and the consequences of their hypersecretion or hyposecretion.

THE ENDOCRINE SYSTEM AND HORMONE FUNCTION—AN OVERVIEW

1. Complete the following statements by choosing answers from the key choices. Record the answers in the answer blanks.

Key Choices

- | | | |
|--------------------------|-------------------|------------------------------|
| A. Cardiovascular system | C. More rapid | E. Nervous system |
| B. Hormones | D. Nerve impulses | F. Slower and more prolonged |

- | | |
|----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>_____ F _____</p> <p>_____ E _____</p> <p>_____ B _____</p> <p>_____ D _____</p> <p>_____ A _____</p> | <p>1. The endocrine system is a major controlling system in the body. Its means of control, however, is much _____ (1) _____ than that of the _____ (2) _____, the other major body system that acts to maintain homeostasis. Perhaps the reason for this is that the endocrine system uses chemical messengers, called _____ (3) _____, instead of _____ (4) _____. These chemical messengers enter the blood and are carried throughout the body by the activity of the _____ (5) _____.</p> |
