Neuroendovascular Surgery Michael B. Horowitz, Elad I. Levy, 2005 Over the past decades many surgical subspecialties have moved from traditionally open procedures towards minimally invasive approaches With the advent of improved technology and smaller more maneuverable devices more delicate procedures have been developed In this volume the most common neuroendovascular procedures currently practiced are discussed Topics include management of intracranial aneurysms arteriovenous malformations tumors intracranial and extracranial arterial stenoses and arterial fistulas This publication provides neurosurgeons radiologists neurologists and trial lawyers with a concise reference that explains the background as well as indications and techniques for performing the most common neuroendovascular procedures

Critical Care Neurology and Neurosurgery Jose I. Suarez, 2004-01-13 An authoritative and comprehensive review of the most important clinical issues facing critically ill neurologic and neurosurgical patients The authors provide pertinent basic clinical diagnostic and management guidelines for all the conditions commonly encountered in the neurocritical care unit including the management of autonomic disorders that require critical care postoperative management and endovascular treatment The authors also discuss the latest developments in the monitoring of different body systems emphasizing the management of cardiorespiratory complications and other medical conditions that may threaten the patient's life Also detailed are the concepts of intracranial physiology and current neuromonitoring techniques subjects whose understanding is basic to effective management of critically ill neurologic patients Numerous tables figures diagrams and radiographs simplify and explicate both the diagnostic and therapeutic processes

Endovascular Neurological Intervention Robert J. Maciunas, 1995 The surgical treatment of neurological disorders has always demanded the utmost of its practitioners and their instruments Refinements in surgical instrumentation and computerized navigational systems have made possible minimally invasive surgeries which use vascular channels to access neurological structures Endovascular Neurological Intervention discusses the wide scope of endovascular neurological surgery Divided into two sections fundamentals and clinical applications Endovascular Neurological Intervention discusses The principles of neuroendovascular intervention Angiography suite specifications Catheter systems and endovascular hardware Pharmacological testing Cerebral angioplasty Carotid artery cavernous sinus fistulas Coil induced thrombosis of intracranial aneurysms Distributed by Thieme for the American Association of Neurological Surgeons

Minimally Invasive Neurosurgery Mark R. Proctor, 2007-11-23 Recognized clinical leaders in neurosurgery and neuroradiology review the cutting edge techniques and technologies now available and describe how minimally invasive techniques have influenced their subspecialties On the radiology side the authors explain the latest developments in magnetic resonance spectroscopy functional imaging and brain mapping with emphasis on the application of image navigation directly in the operating room using both preoperative and intraoperative systems On the surgical side some of the world's leading surgeons in pediatric neurosurgery cerebrovascular surgery neurosurgical oncology spinal and peripheral nerve surgery and trauma surgery detail how they use the powerful new minimally invasive techniques in the own practices Among the novel approaches discussed are radiofrequency radiosurgery thermal therapy and minimally invasive techniques that allow molecular neurosurgery via gene and viral vectors and local delivery systems *The Dark Side of Neuro-Intervention* Riyadh Alokaili, 2019-07-24 Neuro intervention is widely believed to be one of medicine's most exciting specialties given that it is growing dynamic and often rewarding in countless ways to both practitioners and patients However it can be a source of misfortune to recipients and its providers alike in more ways than many of us realize or care to admit This book shows that some problems associated with the field are not solely a product of outlying circumstances or individuals but are rather systemic insidious and ubiquitous issues affecting research education and publications

Textbook of Interventional Neurology Adnan I. Qureshi, Alexandros L. Georgiadis, 2011-04-14 Endovascular intervention using medication and devices introduced through catheters or microcatheters placed into the blood vessels through a percutaneous approach has emerged as a relatively new minimally invasive approach to treat cerebrovascular disease and possibly intracranial neoplasms This textbook provides a comprehensive review of principles pertinent to endovascular treatment of cerebrovascular diseases and intracranial tumors with a detailed description of techniques for these procedures and periprocedural management strategies Particular emphasis is placed on expert interpretation of the quality of evidence provided and implications for practice related to endovascular procedures This will be essential reading

Dmytriw, Byung Moon Kim, QinJian Sun, 2022-04-04 *The Ischemic Penumbra: Still the Target for Stroke Therapies?* Argye E. Hillis, Jean-Claude Baron, 2015-07-23 The ischemic penumbra was initially defined by Symon Lassen and colleagues in the 1970s as an area of brain tissue with inadequate blood flow to maintain electric activity of neurons but adequate blood flow to preserve the function of the ion channels This area of tissue receiving enough blood to survive but not enough to function often surrounds or abuts the irreversibly damaged core in ischemic stroke It was shown that if blood flow could be restored to this area of marginal perfusion the tissue could survive and function again and growth of the core could be prevented Based on seminal PET studies penumbra or penumbral tissue eventually took on a subtly different meaning the

area of brain that is destined to progress to infarct unless blood flow is restored within a particular time window The penumbra thus became the target for all acute stroke interventions to preserve viability of the tissue and restore function New imaging techniques including diffusion and perfusion MRI and CT perfusion were developed to rapidly identify individuals with penumbra who were thought to be the best candidates for aggressive interventions to restore blood flow particularly beyond the licensed time window for IV thrombolysis However most clinical trials have failed to establish the usefulness of identifying candidates for treatment in this way using pre specified protocols and primary endpoints These trials have used different and sometimes unvalidated thresholds of hypoperfusion as well as irreversible infarct and various definitions of significant penumbra or mismatch between irreversible infarct and hypoperfused but salvageable tissue and reanalysis of their data using more refined image processing showed post hoc positivity They have also evaluated outcome in a variety of ways with few studies measuring the direct effect of restoring blood flow on the function of the penumbral tissue Therefore important remaining questions include how to define characterize and image the penumbra in acute stroke to achieve the greatest reliability and validity for what we want to measure and whether this concept so defined provides an optimal target for stroke therapy using state of the art trial design
