Prescription for the People Fran Quigley, 2017-11-15 In *Prescription for the People*, Fran Quigley diagnoses our inability to get medicines to the people who need them and then prescribes the cure. He delivers a clear and convincing argument for a complete shift in the global and U.S. approach to developing and providing essential medicines and a primer on how to make that change happen. Globally, 10 million people die each year because they are unable to pay for medicines that would save them. The cost of prescription drugs is bankrupting families and putting a strain on state and federal budgets. Patients' desperate need for affordable medicines clashes with the core business model of the powerful pharmaceutical industry, which maximizes profits whenever possible. It doesn't have to be this way. Patients and activists are aiming to make all essential medicines affordable by reclaiming medicines as a public good and a human right instead of a profit-making commodity. In this book, Quigley demystifies statistics and terminology, offers solutions to the problems that block universal access to medicines, and provides a road map for activists wanting to make those solutions a reality.

Systematicity Paul Hoyningen-Huene, 2013-03-27 In *Systematicity*, Paul Hoyningen-Huene answers the question, "What is science?" by proposing that scientific knowledge is primarily distinguished from other forms of knowledge, especially everyday knowledge, by being more systematic. Science is here understood in the broadest possible sense, encompassing not only the natural sciences but also mathematics, the social sciences, and the humanities. The author develops his thesis in nine dimensions, in which it is claimed that science is more systematic than other forms of knowledge regarding descriptions, explanations, predictions, the defense of knowledge claims, critical discourse, epistemic connectedness, an ideal of completeness, knowledge generation, and the representation of knowledge. He compares his view with positions on the question held by philosophers from Aristotle to Nicholas Rescher. The book concludes with an exploration of some consequences of Hoyningen-Huene's view concerning the genesis and dynamics of science, the relationship of science and common sense, normative implications of the thesis, and the demarcation criterion between science and pseudo-science.
