Questions and Problems in Machine Design Franklin DeRonde Furman, 1916 **Problems in Machine Design** Oscar Adolph Leutwiler, 1923 **The Machine Question** David J. Gunkel, 2017-09-08 An investigation into the assignment of moral responsibilities and rights to intelligent and autonomous machines of our own making. One of the enduring concerns of moral philosophy is deciding who or what is deserving of ethical consideration. Much recent attention has been devoted to the animal question: consideration of the moral status of nonhuman animals. In this book, David Gunkel takes up the machine question: whether and to what extent intelligent and autonomous machines of our own making can be considered to have legitimate moral responsibilities and any legitimate claim to moral consideration. The machine question poses a fundamental challenge to moral thinking, questioning the traditional philosophical conceptualization of technology as a tool or instrument to be used by human agents. Gunkel begins by addressing the question of machine moral agency: whether a machine might be considered a legitimate moral agent that could be held responsible for decisions and actions. He then approaches the machine question from the other side, considering whether a machine might be a moral patient due to legitimate moral consideration. Finally, Gunkel considers some recent innovations in moral philosophy and critical theory that complicate the machine question, deconstructing the binary agent/patient opposition itself. Technological advances may prompt us to wonder if the science fiction of computers and robots whose actions affect their human companions (think of HAL in *2001: A Space Odyssey*) could become science fact. Gunkel's argument promises to influence future considerations of ethics ourselves and the other entities who inhabit this world. *Modern Machine-shop Practice* Joshua Rose, 1892 *TOEFL 5lb Book of Practice*
