*An Historical Study of the Western Diatonic Modes* Louis Brunke, Fred Duffelmeyer, 1958 This study is an attempt to show the significance of the role of the church modes in Western music They are placed in an historical setting and traced to present day use It has sometimes been thought that the ecclesiastical modes died with the Middle Ages and that their use was confined to the music of the church of that era On the contrary these scale

patterns with Greek names have been of importance in music of subsequent times Time has seen many changes in the music of the West As these changes occurred the church modes remained intact and managed to retain their identities They have continued to serve as models in scale construction to the West throughout the growth of the music system We find that a study of the modes greatly enhances the understanding of music and its history Today the church modes have found new significance in the music of contemporary composers A tiring for the idiom of the traditional major and minor scales led to the revival and readaptation of the modes in the latter part of the nineteenth century Today in the contemporary practice of neo modality there has been a clear return to these old scales but they are not used in the strict manner of the past They are employed in a freer style and in modern harmonic settings This idiom in combination with a return to an objective classic style has brought about a simplification of material form and medium in general Thus we see that seemingly archaic and theoretical scales have survived and continue to affect the music of our world
