Competition And Regulation In Telecommunications Examining Germany And America:

Competition and Regulation in Telecommunications J. Gregory Sidak, Christoph Engel, Günter Knieps, 2012-12-06 This volume brings together academic economists and lawyers to evaluate and compare the regulation of telecommunications markets in Germany and the United States The unifying theme in all of the papers is that the goal of public policy in this area should be to make the broadest and most functional competition possible by means of an appropriate regulatory framework Because the European and American telecommunications markets are becoming more intertwined each day the issues addressed in this volume will be topical to the business government and academic communities for some time For the chairman of the Monopoly Commission Wernhard Moschel the opening of the German telecommunications market has been successful in principle This is clearly recognizable in the case of the competition in long distance transport Based on the view that the regulatory authority should make itself obsolete Professor Moschel advocates an incremental review and gradual reduction of regulation

EC Competition and Telecommunications Law Christian Koenig, Andreas Bartosch, 2009-03-27 This new volume updates the groundbreaking analysis of its first edition in 2002 when the EC common regulatory framework for electronic communications networks and services had just entered into force So much has changed in the intervening years that that this new edition bears little resemblance to its predecessor with every chapter either extensively altered or entirely new It remains however the most detailed and comprehensive overview available of the application of the EC Treaty's competition rules in the markets for telecommunications and audiovisual media and of the applicable regulatory framework In thirteen chapters each contributed by one or more noted legal authorities in the field the second edition of *EC Competition and Telecommunications Law* covers the full range of EC telecommunications law across all major areas of both institutional and substantive law both on the international and EC levels including the following State aid the merger control regulation justification for sector specific regulation in EC competition law network access authorizations and privileges and mobile telephony Relevant EC media and communications law and relevant aspects of EC competition law are dealt with in detail While some chapters focus on competition law others deal primarily with sector specific regulation There is practical guidance throughout on procedural matters alongside analysis of the substantive provisions Well known in its first edition this thoroughly revised and updated version continue to be vital reading for practitioners in particular those specializing in European competition law and for company and in house lawyers who are seeking advice on how European law affects their business As a detailed analysis of the basic legislative and regulatory framework of European telecommunications law it will be an invaluable reference work for lawyers judges regulators and policymakers in all the EC Member States as well as for students and teachers of European law

Network Economics Günter Knieps, 2014-11-14 This textbook on network economics provides essential microeconomic instruments for the analysis of network sectors like telecommunications transport or energy Network specific characteristics emerge both on the cost side and benefit side requiring network

providers to develop innovative entrepreneurial competition strategies for costing pricing and investment From a competition policy perspective a number of interesting questions arise In which parts of networks is competition functional In contrast where is an abuse of market power to be expected What is the division of labor between cartel authorities and regulatory agencies The book develops an analytical framework for all network industries which allows readers to study entrepreneurial strategies as well as regulation and competition policies for network industries

Democratic Governance and Economic Performance Dino Falaschetti,2009-06-02 Conventional wisdom warns that unaccountable political and business agents can enrich a few at the expense of many But logically extending this wisdom implies that associated principals voters consumers shareholders will favor themselves over the greater good when rules of the game instead create too much accountability Democratic Governance and Economic Performance rigorously develops this hypothesis and finds statistical evidence and case study illustrations that democratic institutions at various governance levels e g federal state corporation have facilitated opportunistic gains for electoral consumer and shareholder principals To be sure this conclusion does not dismiss the potential for democratic governance to productively reduce agency costs Rather it suggests that policy makers lawyers and managers can improve governance by weighing the agency benefits of increased accountability against the distributional costs of favoring principal stakeholders over more general economic opportunities Carefully considering the fundamentals that give rise to this tradeoff should interest students and scholars working at the intersection of social science and the law and can help professionals improve their own performance in policy legal and business settings
