Compact City The Next Urban Evolution In Response To Climate Change:

Compact City Thomas L. Saaty, 2013 *Compact City* Thomas L. Saaty, We need to control nature by eliminating its capricious threats to our lives We do it best by not only making our living working sports and other leisure structures more accessible in space but also by minimizing and banishing congestions and the need for long times to commute to work or to access shopping malls sports and cultural activities With the threat of global warming and melting of the polar ice cap in the Antarctic low lying cities throughout the world are threatened with drowning under more than 150 feet of water What should we be thinking about insulating ourselves from natural threats like hurricanes and tsunamis and earthquakes Surprisingly enough the new design will eliminate one of the problems of poverty the lack of shelter **Sustainable Urban Evolution**

Madiha Bencekri, Seungjae Lee, 2025-08-02 This book *Sustainable Urban Evolution* delves into the transformative potential of the 15 minute city concept an innovative urban planning model crafted to address pressing issues like urban sprawl environmental sustainability resilience and the demand for livable cities In a world where urban areas are striving to harmonize growth with environmental and social well being this book provides timely and strategic insights Bridging the divide between urban planning theory and practical implementation *Sustainable Urban Evolution* equips readers with a deep understanding of how the 15 minute city model can be applied to create dynamic efficient and sustainable urban environments It explores the concept s origins key principles such as compactness and multimodality and highlights its diverse benefits including enhanced environmental sustainability social equity and economic resilience By showcasing global case studies and real world examples the book demonstrates how the 15 minute city model can be tailored to various urban settings It offers practical strategies and frameworks to guide successful implementation making it an indispensable resource for urban planners policymakers academics and community leaders dedicated to advancing sustainable urban development

Sustainable Ho Chi Minh City: Climate Policies for Emerging Mega Cities Antje Katzschner, Michael Waibel, Dirk Schwede, Lutz Katzschner, Michael Schmidt, Harry Storch, 2015-12-01 As climate change and urban development are closely interlinked and often interact negatively this edited volume takes Ho Chi Minh City HCMC Vietnam s first mega urban region as a case study to analyse its vulnerability to climate change and to suggest measures towards a more sustainable urban development The book offers an overview on land use planning regarding the aspects of urban flooding urban climate urban energy and urban mobility as well as spatial views from the angle of urban planning such as the metropolitan level the city the neighbourhood and building level It shows that to a significant degree measures dealing with climate change can be taken from the toolbox of sustainable urban development and reflects how institutional structures need to change to enhance chances for implementation given socio cultural and economic constraints This is merged and integrated into a holistic perspective of planning recommendations supporting the municipal government to increase its adaptive capacity The authors are members of a German government funded research project on how to support HCMC s municipal government to adapt to

risks related to climate change **Urban Evolutionary Biology** Marta Szulkin, Jason Munshi-South, Anne Charmantier, 2020-05-05 Urban Evolutionary Biology fills an important knowledge gap on wild organismal evolution in the urban environment whilst offering a novel exploration of the fast growing new field of evolutionary research The growing rate of urbanization and the maturation of urban study systems worldwide means interest in the urban environment as an agent of evolutionary change is rapidly increasing We are presently witnessing the emergence of a new field of research in evolutionary biology Despite its rapid global expansion the urban environment has until now been a largely neglected study site among evolutionary biologists With its conspicuously altered ecological dynamics it stands in stark contrast to the natural environments traditionally used as cornerstones for evolutionary ecology research Urbanization can offer a great range of new opportunities to test for rapid evolutionary processes as a consequence of human activity both because of replicate contexts for hypothesis testing but also because cities are characterized by an array of easily quantifiable environmental axes of variation and thus testable agents of selection Thanks to a wide possible breadth of inference in terms of taxa that may be studied and a great variety of analytical methods urban evolution has the potential to stand at a fascinating multi disciplinary crossroad enriching the field of evolutionary biology with emergent yet incredibly potent new research themes where the urban habitat is key Urban Evolutionary Biology is an advanced textbook suitable for graduate level students as well as professional researchers studying the genetics evolutionary biology and ecology of urban environments It is also highly relevant to urban ecologists and urban wildlife practitioners *The Urban Condition* Brendan Gleeson, 2014-05-23 This book will speak to the new human epoch the Urban Age A majority of humanity now lives for the first time in cities The city the highest invention of the modern age is now the human heartland And yet the same process that brought us the city and its wonders modernisation has also thrown up challenges and threats especially climate change resource depletion social division and economic insecurity This book considers how these threats are encountered and countered in the urban age focusing on the issue of human knowledge and self awareness just as Hannah Arendt s influential *The Human Condition* did half a century ago *The Human Condition* is now *The Urban Condition* And it is this condition that will define human prospects in an age of default and risk Gleeson expertly explores the concept through three main themes The first is an exploration of what defines the current human condition especially the expanding cities that are at the heart of an over consumptive world economic order The second exposes and reviews the reawakening of forms of knowledge naturalism that are likely to worsen not improve our comprehension of the crisis The new science of urbanism in popular new literature exemplifies this dangerous trend The third and last part of the book considers prospects for a new urban and therefore human dispensation *The Good City* We must first journey in our urban vessels through troubled times But can we now start to plot the way to new shores to a safer more resilient city that provides for human flourishing *The Urban Condition* attempts this ideal conceiving a new urbanism based on the old idea of self limitation *The Urban Condition* is an

original timely book that reconsiders and redeploys Arendt's famous notion of The Human Condition in an age of cities and risk. It brings together several important strands of human consideration: urbanisation, climate threat, resource depletion, economic default and critical knowledge, and weaves them into a new analysis of the times. It also looks to a future that is nearly with us of changed climate, resource scarcity and economic stress. The book journeys into these troubled times proposing the idea of Lifeboat Cities as a way of thinking about the human journey to come. *The Long-Term Perspective of Human Impact on Landscape for Environmental Change and Sustainability* Anna Maria Mercuri, Assunta Florenzano, 2019-11-19. The research studies included in this Special Issue highlight the fundamental contribution of the knowledge of environmental history to conscious and efficient environment conservation and management. The long term perspective of the dynamics that govern the human climate ecosystem is becoming one of the main focuses of interest in biological and earth system sciences. Multidisciplinary bio-geo-archaeo investigations into the underlying processes of human impact on the landscape are crucial to envisage possible future scenarios of biosphere responses to global warming and biodiversity losses. This Special Issue seeks to engage an interdisciplinary dialog on the dynamic interactions between nature and society focusing on long term environmental data as an essential tool for better informed landscape management decisions to achieve an equilibrium between conservation and sustainable resource exploitation. *The Routledge Handbook of Urban Ecology* Ian Douglas, P. M. L. Anderson, David Goode, Michael C. Houck, David Maddox, Harini Nagendra, Puay Yok Tan, 2020-12-15. This second edition covers recent developments around the world with contributors from 33 different countries. It widens the handbook's scope by including ecological design, consideration of cultural dimensions of the use and conservation of urban nature, the roles of government and civil society and the continuing issues of equity and fairness in access to urban greenspaces. New features include an emphasis on the biophilic design of homes and workplaces demonstrating the value of nature in order to counter the still prevalent attitude among many developers that nature is a constraint rather than a value. The volume explores great practical achievements that have occurred since the first edition with many governments increasingly recognizing and legislating on urban nature and green infrastructure matters since cities play a major role in adapting to change particularly to climate crisis. New topics such as the ecological role of light at night and human microbiota in the urban ecosystem are introduced. Additional attention is given to food production in cities particularly the multiple roles of urban agriculture and household gardens in different contexts from wealthy communities to the poorest informal settlements in deprived communities. The emphasis is on demonstrating what can be achieved and what is already being done. The book aims to help scholars and graduate students by providing an invaluable and up to date guide to current urban ecological thinking across the range of disciplines such as geography, ecology, environmental science, studies, planning and urban studies that converge in the study of towns and cities and urban design and living. It will also assist practitioners and civil society members in discovering the ways different specialists and thinkers approach urban nature.
