## **Competence And Vulnerability In Biomedical Research Competence And Vulnerability In Biomedical Research:**

**Competence and Vulnerability in Biomedical Research** Philip Bielby, 2008-09-16 Enhanced knowledge of the nature and causes of mental disorder have led increasingly to a need for the recruitment of cognitively vulnerable participants in biomedical research. These individuals often fall into the grey area between obvious decisional competence and obvious decisional incompetence and as a result may not be recognised as having the legal capacity to make such decisions themselves. At the core of the ethical debate surrounding the participation of cognitively vulnerable individuals in research is when if at all we should judge them decisionally and legally competent to consent to or refuse research participation on their own behalf and when they should be judged incompetent in this respect. In this book the author develops a novel justificatory framework for making judgments of decisional competence to consent to biomedical research with reference to five groups of cognitively vulnerable individuals: older children and adolescents, adults with intellectual disabilities, adults with depression, adults with schizophrenia, and adults with dementia including Alzheimer's disease. Using this framework the author argues that we can make morally defensible judgments about the competence or incompetence of a potential participant to give contemporaneous consent to research by having regard to whether a judgment of competence would be more harmful to the generic rights of the potential participant than a judgment of incompetence. The argument is also used to justify an account of supported decision making in research and applied to evaluate the extent to which this approach is evident in existing ethical guidelines and legal provisions. The book will be of interest to bioethicists as well as psychiatrists and academic medical lawyers interested in normative questions raised by the concepts of competence and capacity. **Competence and**

**Vulnerability in Biomedical Research (2008).** , *Ethics and Neuromarketing* Andrew R. Thomas, Nicolae Alexandru Pop, Ana Maria Iorga, Cristian Ducu, 2016-10-19 This book addresses the emerging field of neuromarketing which at its core aims to better understand the impact of marketing stimuli by observing and interpreting human emotions. It includes contributions from leading researchers and practitioners venturing beyond the tactics and strategies of neuromarketing to consider the ethical implications of applying powerful tools for data collection. The rationale behind neuromarketing is that human decision making is not primarily a conscious process. Instead, there is increasing evidence that the willingness to buy products and services is an emotional process where the brain uses short cuts to accelerate the decision making process. At the intersection of economics, neuroscience, consumer behavior, and cognitive psychology, neuromarketing focuses on which emotions are relevant in human decision making and uses this knowledge to make marketing more effective. The knowledge is applied in product design, enhancing promotions and advertising, pricing professional services, and store design, and improving the consumer experience as a whole. The foundation for all of this activity is data gathering and analysis. Like many new processes and innovations, much of neuromarketing is operating far ahead of current governmental compliance and regulation, and thus current practices are raising ethical issues. For example, facial recognition software used to monitor and

detect a wide range of micro expressions has been tested at several airports under the guise of security and counterterrorism To what extent is it acceptable to screen the entire population using these powerful and intrusive techniques without getting passengers consent Citing numerous examples from the public and private sectors the editors and contributing authors argue that while the United States has catalyzed technological advancements European companies and governments are more progressive when it comes to defining ethical parameters and developing policies This book details many of those efforts and offers rational constructive approaches to laying an ethical foundation for neuromarketing efforts *The Cambridge Handbook of Health Research Regulation* Graeme Laurie,Edward Dove,Agomoni Ganguli-Mitra,Catriona McMillan,Emily Postan,Nayha Sethi,Annie Sorbie,2021-06-09 The definitive reference guide to designing scientifically sound and ethically robust medical research considering legal ethical and practical issues [The Limits of Consent](#) Oonagh Corrigan,John McMillan,Kathleen Liddell,Martin Richards,Charles Weijer,2009-01-29 Since its inception as an international requirement to protect patients and healthy volunteers taking part in medical research informed consent has become the primary consideration in research ethics Despite the ubiquity of consent however scholars have begun to question its adequacy for contemporary biomedical research The Limits of Consent explores this issue reviewing the application of consent to genetic research clinical trials and research involving vulnerable populations For example in genetic research information obtained from an autonomous research participant may have significant bearing on the interests of family members who have not consented to the study This casts doubt on the adequacy of consent for such studies The Limits of Consent also questions the assumptions that informed consent is essential and that it satisfactorily protects the principle of individual autonomy It reviews recent empirical studies that challenge the possibility of truly informed consent and highlights the extent to which consent is governed by social norms and expectations It also investigates how consent might be of secondary importance in some circumstances for example when a research project appears to protect a public or community interest Building on these observations the authors make bold attempts to outline constructive solutions to the problems identified with perspectives from medicine law philosophy and sociology This fascinating and provocative exploration of the limits of informed consent will appeal to ethicists social scientists health lawyers clinical researchers research ethics committee members policy makers and others with an interest in bioethics [Law Through the Life Course](#) Jonathan Herring,2021-05-03 This book is the first to explore the interactions of the law with the life course in order to understand the complex life journey as a whole Jonathan Herring reveals how the law privileges middle age to the detriment of the whole life story and explains why an understanding of the life course is important for lawyers **The Clinical and Ethical Practice of Neuromodulation - Deep Brain Stimulation and Beyond** Markus Christen,Sabine Müller,2018-01-15 Neuromodulation is among the fastest growing areas of medicine involving many diverse specialties and affecting hundreds of thousands of patients with numerous disorders worldwide It can briefly be described as the science of how electrical

chemical and mechanical interventions can modulate the nervous system function A prominent example of neuromodulation is deep brain stimulation DBS an intervention that reflects a fundamental shift in the understanding of neurological and psychiatric diseases namely as resulting from a dysfunctional activity pattern in a defined neuronal network that can be normalized by targeted stimulation The application of DBS has grown remarkably and more than 130 000 patients worldwide have obtained a DBS intervention in the past 30 years most of them for treating movement disorders This Frontiers Research Topics provides an overview on the current discussion beyond basic research in DBS and other brain stimulation technologies Researchers from various disciplines who are working on broader clinical ethical and social issues related to DBS and related neuromodulation technologies have contributed to this research topic
