[Natural Resource And Environmental Policy Analysis](#) George M Johnston, 2021-11-28 As natural resources have become scarcer issues of environmental policy have become more vital and subject to debate in global as well as local arenas Through the use of case studies especially developed for this book the authors analyze the wide range of institutional contexts in which natural resource and environmental policy issues arise and the processes by which they are resolved The first chapter provides a theoretical framework of key resource and environmental economics concepts an overview that gradually broadens as the student is exposed to alternative methods of analysis including market oriented analysis institutional analysis and modeling The case studies all begin with discussions of the pertinent biological physical social and institutional issues before economic analysis is applied and policy conclusions are drawn Suggested readings and study questions follow each chapter This book is designed for use in upper level college courses in natural resource and environmental economics and graduate courses in resource management It can be used either as a primary text in conjunction with theoretical readings or as a supplemental source of case study readings The cases will also be valuable for natural resource environmental and community development economists

Econometrics Informing Natural Resources Management Phoebe Koundouri, 2004 This

fascinating book outlines the fundamental principles and difficulties that characterise the challenging task of using econometrics to inform natural resource management policies and illustrates them through a number of case studies from all over the world. The book offers a comprehensive overview of the broader picture of the state of the art in econometrics as applied to environmental and natural resource management. It includes a wide range of econometric techniques that can be used to inform natural resource management while keeping a balance between methods and applications. Case studies have been carefully chosen to be of major concern in the arena of environmental policy mainly in Europe both EU member states and assessing countries but also in the US and some developing countries. *Econometrics Informing Natural Resources Management* will be welcomed by academics and researchers interested in the areas of natural resource economics and econometrics and also applied econometrics.

Encyclopedia of Energy, Natural Resource, and Environmental Economics, 2013-03-29 Every decision about energy involves its price and cost. The price of gasoline and the cost of buying from foreign producers, the price of nuclear and hydroelectricity and the costs to our ecosystems, the price of electricity from coal fired plants and the cost to the atmosphere. Giving life to inventions, lifestyle changes, geopolitical shifts and things in between, energy economics is of high interest to Academia, Corporations and Governments. For economists, energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources: energy economics which focuses on energy related subjects such as renewable energy, hydropower, nuclear power and the political economy of energy; resource economics which covers subjects in land and water use such as mining, fisheries, agriculture and forests; environmental economics which takes a broader view of natural resources through economic concepts such as risk, valuation, regulation and distribution. Although the three are closely related, they are not often presented as an integrated whole. This Encyclopedia has done just that by unifying these fields into a high quality and unique overview. The only reference work that codifies the relationships among the three subdisciplines: energy economics, resource economics and environmental economics. Understanding these relationships just became simpler. Nobel Prize Winning Editor in Chief, joint recipient 2007 Peace Prize, Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics. This work contains in equal parts information from and about business, academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business, universities and government.

Natural Resource Economics Jon M. Conrad, Daniel Rondeau, 2020-01-30 Mathematical analysis is key to the modeling and management of natural resources. By presenting required mathematical methods, classic dynamic models for non renewable and renewable resources and by exploring several contemporary problems, this text provides a foundation for advanced research. Topics include seminal models in fishery, forestry and non renewable resource management as well as an extensive collection of contemporary applications that include the optimal transition from fossil fuels to clean energy, the optimal timing of

interventions to save endangered species pest control and the optimal management of antibiotic resistance Deterministic and stochastic models in both discrete and continuous time are covered The book encourages students to pursue a deeper understanding of the analytics of resource problems and to deploy numerical methods when analytical results prove intractable The combination of analysis theory and applications will launch the next generation of resource economists while serving as a useful reference for established researchers

Training Resource Manual, 2009 The Manual provides step by step guidance to assist instructors in training policymakers and practitioners in the use of economic instruments pollution taxes user fees property rights etc for sustainable development in general and for environmental and natural resource management in particular Designed as an interactive working document composed of flexible modules and exercises and providing guidance for trainers and course participants the manual offers substantial flexibility for trainers to custom design courses that meet local needs and priorities

Research Tools in Natural Resource and Environmental Economics Amitrajeet A. Batabyal, Peter Nijkamp, 2011 Key Features First book of its kind in the field Examines and analyzes how key tools are used to conduct theoretical and empirical research in natural resource and environmental economics in contemporary times Compiles various articles and accounts concerned with the relevant pedagogical discussion Written by recognized experts and prominent international researchers in the field

Using Multi-Criteria Decision Analysis in Natural Resource Management Tony Prato, 2017-03-02 Providing useful insights on the use of Multi Criteria Decision Analysis MCDA in natural resource management this book examines a number of empirical applications for several countries and a variety of natural resources It is shown that using MCDA in the management of water forestry wetland and other natural resources can substantially improve the design and implementation of natural resource and environmental policies Stakeholder involvement is also an important determinant of successful resource management and MCDA provides a useful and effective framework for getting stakeholders involved in resource management decisions Using Multi Criteria Decision Analysis in Natural Resource Management gives in depth analysis of the potential problems in applying these techniques including difficulties eliciting required information lack of suitable measures for environmental variables and the need to develop innovative methods to simplify the use of MCDA
