Ethical Reasoning: Theory and Application Andrew Kernohan, 2020-09-30 The philosophical tradition has given rise to many competing moral theories Virtue ethics encourages the flourishing of the person theories of justice and rights tell us to act according to principles and consequentialist theories advise that we seek to bring about good ends These varied theories highlight the morally relevant features of the problems that we encounter both in everyday personal interactions and on a broader social scale When used together they allow us to address moral conflicts by balancing a plurality of reasons in order to reach nuanced ethical decisions In *Ethical Reasoning Theory and Application* Andrew Kernohan guides the reader through the basics of these moral theories showing their strengths and weaknesses and emphasizing the ways in which competing moral reasons can be collectively employed to guide decision making Throughout the focus is on practical applications and on how each theory can play a role in solving problems and addressing issues Numerous questions and exercises are provided to encourage active reflection and retention of information

Reimagining Ethics Matteo Andreozzi, 2025-08-24 Several environmental problems are currently seriously undermining the traditional belief that the moral community should be restricted to human beings only New scientific theories especially in the fields of biology ethology and ecology together with recent scientific discoveries demonstrating how human activities are jeopardizing ecosystem services urge for a paradigmatic change in our moral convictions Environmental ethics has taken up the challenge and opened an extremely urgent and inspiring call for philosophical research This is the call for extending the moral community to non human and non paradigmatic entities regarding them as moral patients The main aim of this book is to analyze the possibility and the legitimacy of a non anthropocentric environmental ethic In pursuing this aim I primarily demonstrate the possibility and need to extend the status of moral patient beyond the ideal paradigmatic human being I also provide an original categorization of several theoretical projects that have been proposed in the last few decades Secondly this book comprises a constructive critique of the most significant moral theories debated in the field and outlines a personal theoretical proposal for a new environmental ethic My claim is that the refusal of ethical and ontological supremacy of human beings is not only necessary but also sufficient to set the foundation for a formally and materially valid ethical system Even without abandoning the most accepted forms of moral epistemology it is nonetheless possible to admit the need to respect different kinds of non human and non paradigmatic moral patients

Ethics of Environmental Health Friedo

Zölzer, Gaston Meskens, 2017-04-21 Environmental health encompasses the assessment and control of those environmental factors that can potentially affect human health such as radiation toxic chemicals and other hazardous agents It is often assumed that the assessment part is just a matter of scientific research and the control part a matter of implementing standards which unambiguously follow from that research But it is less commonly understood that environmental health also requires addressing questions of an ethical nature How can we determine the acceptable risk level for the general population or for certain groups How should we deal with uneven distributions of risks and benefits How do we communicate about risks with the stakeholders This multidisciplinary collection brings together a number of leading researchers and scholars in order to generate discussion surrounding these key questions and to bring the ethical implications of science and technology to the forefront of critical thought Providing a broad overview of the Ethics of Environmental Health its philosophical foundations and practical applications this book offers a significant contribution to ongoing discussions in sustainable development and will be of interest to scholars and practitioners of Environmental Health urban studies and healthcare ICYMARE - Early Career Researchers in Marine Science Simon Jungblut, Carolin Müller, Lena Rölfer, Yvonne Schadewell, 2025-06-05 The International Conference for Young Marine Researchers ICYMARE is a recently founded bottom up driven networking initiative ICYMARE conducts an annual on site conference event as well as a monthly Online Forum to foster international exchange and networking among marine early career researchers In both cases on site conference and Online Forum the early careers organize and conduct the whole event but also identify the conference topics and prepare and moderate their topical sessions This Research Topic aims to feature articles authored by early career researchers who were involved as a conference or Online Forum session hosts in the ICYMARE initiative As emerging experts in their respective fields of marine science they are invited to contribute review articles on specific topics within the topical frame of their ICYMARE conference session Thus articles on this Research Topic may come from all fields of marine sciences as it reflects the scope of the ICYMARE conferences This is Environmental Ethics: An Introduction Wendy Lynne Lee, 2022-07-18 Provides students and scholars with a comprehensive introduction to the growing field of environmental philosophy and ethics Mitigating the effects of climate change will require global cooperation and lasting commitment Of the many disciplines addressing the ecological crisis philosophy is perhaps best suited to develop the conceptual foundations of a viable and sustainable environmental ethic This is Environmental Ethics provides an expansive overview of the key theories underpinning contemporary discussions of our moral responsibilities to non human nature and living creatures Adopting a critical approach author Wendy Lynne Lee closely examines major moral theories to discern which ethic provides the compass needed to navigate the social political and economic challenges of potentially catastrophic environmental transformation not only but especially the climate crisis Lee argues that the ethic ultimately adopted must make the welfare of non human animals and plant life a priority in our moral decision making recognizing that ecological conditions form the existential conditions of all

life on the planet Throughout the text detailed yet accessible chapters demonstrate why philosophy is relevant and useful in the face of an uncertain environmental future Questions which environmental theory might best address the environmental challenges of climate change and the potential for recurring pandemic Discusses how inequalities of race sex gender economic status geography and species impact our understanding of environmental dilemmas Explores the role of moral principles in making decisions to resolve real world dilemmas Incorporates extensive critiques of moral extensionist and ecocentric arguments Introduces cutting edge work done by radical deep green writers animal rights theorists eco phenomenologists and ecofeminists This is Environmental Ethics is essential reading for undergraduate students in courses on philosophy geography environmental studies feminist theory ecology human and animal rights and social justice as well as an excellent graduate level introduction to the key theories and thinkers of environmental philosophy Beyond Sustainability Tim Delaney, Tim Madigan, 2021-06-30 This book approaches environmentalism via two academic disciplines sociology and philosophy Both have concerns about the environment s ability not only to sustain itself but to thrive The authors argue that rather than simple sustainability we must promote thriving for the sake of protecting the environment and all living things In this greatly expanded second edition the authors have updated data and examples introduced new topics and concepts and emphasized the need to lessen our dependence on fossil fuels Numerous topics are explored from the differences between sustainability and thriving and the overuse of plastic to mass extinction the role of natural disasters and more The Covid 19 pandemic offers an added perspective on the relationship between disease and the environment *Etiche dell'ambiente* AA. Environmental Ethics John Benson, 2000 Environmental Ethics is an introductory textbook on ethical issues about the environment and our involvement with it Chinese Environmental Ethics Mayfair Yang, 2021-11-08 An interdisciplinary collection in the new field of environmental humanities this volume brings together Chinese environmental ethics religious ontology and religious practice to explore how traditional Chinese religious environmental ethics are actually put into social practice both in China s past and present It also examines how Chinese religious teachings offer a wealth of resources to the environmental project of forging new ontologies for humans co existing with other living beings Different chapters examine how Buddhist ontology avoids anthropocentrism fengshui Chinese geomancy can help protect the landscape from economic development popular religion organizes tree planting ancient dream interpretation practices avoided constructing the possessive individual subjectivity of modern consumerism Buddhist rituals and ethics promoted compassion for animals and modern recycling Confucian ancestor rituals and tombs have deterred industrial expansion and also how Daoism s potential role to deter desertification in northern China was stymied by state operations in contemporary China A significant advance

in the field of Chinese environmental anthropology the outstanding scholars in this volume provide a unique and much needed contribution to the scholarship on China and the environment *Le sfide dell'etica ambientale* Matteo Andreozzi, 2015-03-12 L'attribuzione dello status di persona a soggetti in precedenza discriminati ha giocato un ruolo fondamentale nello storico processo di estensione dei diritti morali e civili a tutti gli esseri umani. Allo stesso modo oggi l'inclusione di almeno una parte del mondo non umano all'interno della comunità morale, uno degli aspetti cruciali del discorso etico contemporaneo, un aspetto la cui importanza è stata infatti durante gli ultimi quarant'anni sostenuta da un numero crescente di autori. Ciononostante sono stati pochi i tentativi di difendere la possibilità di un'etica ambientale che pur fondandosi su una teoria morale non antropocentrica si dimostri tutt'altro che controintuitiva o anti-umanista. Ancora meno sono stati gli sforzi di stabilire delle coordinate teoriche in grado di difendere la validità formale e materiale dei diversi paradigmi teorici esistenti al suo interno. Questo libro rappresenta il tentativo di illustrare e discutere criticamente le condizioni di possibilità di validità formale e di validità materiale della disciplina e al contempo anche lo sforzo di conciliare tra loro tanto l'etica tradizionale con l'etica ambientale quanto le svariate proposte teoriche presenti all'interno di quest'ultimo campo di indagine. Nel rivolgere la propria attenzione a questioni di estrema rilevanza per l'agenda globale, cui sarà necessario far fronte in pochi decenni, l'etica ambientale contiene un invito alla ricerca quanto mai attuale e stimolante. Tale invito è stato qui raccolto con estremo interesse e con una grande passione. La speranza che le riflessioni critiche contenute in questo volume siano in grado di suscitare lo stesso interesse e la stessa passione per le questioni sollevate dall'etica ambientale in altri studiosi, non solo estimatori ma anche detrattori della materia. *Postmodern Environmental Ethics* Max Oelschlaeger, 1995-08-17 This book explains the role of language in causing and in resolving the ecocrisis showing that ecologically adaptive behavior can be facilitated through language. The authors explore the discourses of deep ecology, ecofeminism, Judeo Christianity, quantum theory, and Native American world views all to the end of empowering ecosocial change. 31 Dialoghi sul postumano Alessandro Ferrante, Jole Orsenigo, 2018-02-19 T00:00:00+01:00 Il volume promuove il dialogo fra settori di studio eterogenei in particolare pedagogia, filosofia, letteratura, sociologia, etologia al fine di proporre una riflessione transdisciplinare su come le prospettive postumaniste possano contribuire a riarticolare in profondità i differenti campi del sapere, modificare le logiche linguistiche, i criteri epistemologici, i metodi di analisi, le metodologie di indagine, immaginare l'obiettivo del testo di riflettere criticamente sull'emersione di un nuovo paradigma culturale che si pone come alternativo sia a quello umanista sia a quello scientista e tecnocratico. Nello specifico il volume ambisce a rendere conto della svolta postumanista e postantropocentrica che sta avvenendo tanto in filosofia quanto nelle scienze umane e della natura e di come questa svolta possa aiutare a interpretare le metamorfosi che caratterizzano lo scenario contemporaneo. **The end of animal life: a start for ethical debate** Franck L.B. Meijboom, Elsbeth N. Stassen, 2023-08-07 Killing animals is common practice yet it is not morally neutral. The end

of animal life is related to many societal and ethical questions and concerns Questions such as how long should we continue to treat an animal before putting it down But also the question whether it could be legitimate to kill individual animals for the welfare of the herd or of future generations The ongoing public and academic discussions on these and on other well known questions like those related to the killing of animals for food or for scientific purposes show that there is no one standard evaluation of animal life This book is an edited volume that enables the reader to get a grip on that plurality of views with regard to animals It helps to deal with the many questions related to the end of animal life The chapters show how the plurality of views on killing animals is related to moral presuppositions by providing a clear overview of the ethical views on end of life decisions Furthermore the book contains a number of applied studies of the ethical questions related to killing animals in various practices including small animal practice wildlife management fishing and fish farming animal experimentation and livestock farming These chapters can help veterinarians scientists students policy makers and many other professionals working with animals to easily get a good overview of the issues at stake and may contribute to responsible decision making with regard to the end of animal life
