Garfield, William Edelglass, 2011-05-23 The Oxford Handbook of World Philosophy provides the advanced student or scholar a set of introductions to each of the world's major non-European philosophical traditions. It offers the non-specialist a way in to unfamiliar philosophical texts and methods and the opportunity to explore non-European philosophical terrain and to connect her work in one tradition to philosophical ideas or texts from another. Sections on Chinese Philosophy, Indian Philosophy, Buddhist Philosophy, East Asian Philosophy, African Philosophy, and Recent Trends in Global Philosophy are each edited by an expert in the field. Each section includes a general introduction and a set of authoritative articles written by leading scholars designed to provide the non-specialist a broad overview of a major topic or figure. This volume is an invaluable aid to those who would like to pursue philosophy in a global context and to those who are committed to moving beyond Eurocentrism in academic philosophy. **Spirit of the Environment** David E. Cooper, Joy A. Palmer, 2004-06-02 Spirit of the Environment brings spiritual and religious concerns to environmental issues. Providing a much needed alternative to exploring human beings' relationship to the natural world through the restrictive lenses of science, ecology, or even morality, this book offers a fresh perspective to the field. Spirit of the Environment addresses the environmental attitudes of the major religions, the relationship between art and nature, the Gaia hypothesis, the non-instrumental values which have inspired environmental concern. Contributors range from a variety of disciplines including philosophy, comparative religion, education, and social anthropology, providing students with an intriguing survey on the role that spirituality and religion play in nature. This is a vital collection for those eager to examine the relationship between the spiritual and the environment. Ecological Economics Gareth Edwards-Jones, Ben Davies, Salman S. Hussain, 2009-04-01 Ecological economics is an exciting interdisciplinary field of study that combines insights from the natural sciences, economics, philosophy, and other fields to develop innovative approaches to environmental problems. It draws on a wide range of analytical perspectives, some radical, others more conventional, to build a more complete understanding of human ecosystem interactions. Current research in the field includes work on nature conservation, land use planning, pollution control, natural resource management, and environmental impact assessment evaluation. Ecological Economics provides a comprehensive introduction to the core themes presented in a clearly structured style with chapters tailored specifically to readers without any economic or philosophical training. There is an emphasis throughout on the complementary roles of economics, ethics, and ecology in environmental decision-making processes. The book reviews the evolution of important ideas in the field, explores the fundamental philosophies underlying different approaches to environmental problems, explains in detail the specific tools and techniques used in these approaches, and gives numerous examples of how they can be applied. Special importance is attached to understanding both the advantages and limitations of different analyses in order to provide a balanced and coherent view of how these different approaches interrelate and how their roles vary in different contexts.
