country with an effective federal environmental protection agency and highly transparent policy and judicial processes None of the three nation states involved has a strong green political party And the affected communities in all three cases remain dissatisfied with the outcomes to varying degrees What can we make of these observations Is there a systematic relationship between them or any other political social cultural or economic factors and the responses to environmental crises by nation states To answer these questions a more systematic analysis of the attendant political processes is needed Only then can we suggest whether hope or despair is a more appropriate reaction 1 2 Global Environmental Issues Since the 1960s

environmental issues have entered the agendas of most nation states Pollution of land air and water have endangered ecosystems and public health and called for a governmental response

The Power of Narrative in Environmental Networks Raul Lejano, Mrill Ingram, Helen Ingram, 2013-07-26 Theory and case studies demonstrate the analytic potential of mutually constitutive narrative networks in environmental governance

Taking Sustainable Cities Seriously, second edition Kent E. Portney, 2013-01-11 A theoretically driven comparison of sustainability programs in American cities updated with the latest research and additional case studies Today most major cities have undertaken some form of sustainability initiative Yet there have been few systematic comparisons across cities or theoretically grounded considerations of what works and what does not and why In Taking Sustainable Cities Seriously Kent Portney addresses this gap offering a comprehensive overview and analysis of sustainability programs and policies in American cities After discussing the conceptual underpinnings of sustainability he examines the local aspects of sustainability considers the measurement of sustainability and offers an index of serious sustainability for the fifty five largest cities in the country examines the relationship between sustainability and economic growth and discusses issues of governance equity and implementation He also offers extensive case studies with separate chapters on large medium size and small cities and provides an empirically grounded analysis of why some large cities are more ambitious than others in their sustainability efforts This second edition has been updated throughout with new material that draws on the latest research It also offers numerous additional case studies a new chapter on management and implementation issues and a greatly expanded comparative analysis of big city sustainability initiatives Portney shows how cities use the broad rubric of sustainability to achieve particular political ends and he dispels the notion that only cities that are politically liberal are interested in sustainability Taking Sustainable Cities Seriously draws a roadmap for effective sustainability initiatives

Governing the Tap Megan Mullin, 2009-08-21 An analysis of the political consequences of special district governance in drinking water management that offers new insights into the influence of political structures on local policymaking More than ever Americans rely on independent special districts to provide public services The special district which can be as small as a low budget mosquito abatement district or as vast as the Port Authority of New York and New Jersey has become the most common form of local governance in the United States In Governing the Tap Megan Mullin examines the consequences of specialization and the fragmentation of

policymaking authority through the lens of local drinking water policy Directly comparing specific conservation land use and contracting policies enacted by different forms of local government Mullin investigates the capacity of special districts to engage in responsive and collaborative decision making that promotes sustainable use of water resources She concludes that the effect of specialization is conditional on the structure of institutions and the severity of the policy problem with specialization offering the most benefit on policy problems that are least severe Mullin presents a political theory of specialized governance that is relevant to any of the variety of functions special districts perform Governing the Tap offers not only the first study of how the new decentralized politics of water is taking shape in American communities but also new and important findings about the influence of institutional structures on local policymaking

Japan's Nuclear Disaster and the Politics of Safety Governance Florentine Koppenborg, 2023-06-15 In Japan's Nuclear Disaster and the Politics of Safety Governance Florentine Koppenborg argues that the regulatory reforms taken up in the wake of the Fukushima disaster on March 11 2011 directly and indirectly raised the costs of nuclear power in Japan The Nuclear Regulation Authority resisted capture by the nuclear industry and fundamentally altered the environment for nuclear policy implementation Independent safety regulation changed state business relations in the nuclear power domain from regulatory capture to top down safety regulation which raised technical safety costs for electric utilities Furthermore the safety agency's extended emergency preparedness regulations expanded the allegorical backyard of NIMBY demonstrations Antinuclear protests mainly lawsuits challenging restarts incurred additional social acceptance costs Increasing costs undermined pronuclear actors' ability to implement nuclear power policy and caused a rift inside the nuclear village Small nuclear safety administration reforms were in fact game changers for nuclear power politics in Japan Koppenborg's findings contribute to the vibrant conversations about the rise of independent regulatory agencies crisis as a mechanism for change and the role of nuclear power amid global interest in decarbonizing our energy supply

Conceptual Innovation in Environmental Policy James Meadowcroft, Daniel J. Fiorino, 2017-09-29 Concepts and their role in the evolution of modern environmental policy with case studies of eleven influential concepts ranging from environment to sustainable consumption Concepts are thought categories through which we apprehend the world they enable but also constrain reasoning and debate and serve as building blocks for more elaborate arguments This book traces the links between conceptual innovation in the environmental sphere and the evolution of environmental policy and discourse It offers both a broad framework for examining the emergence evolution and effects of policy concepts and a detailed analysis of eleven influential environmental concepts In recent decades conceptual evolution has been particularly notable in environmental governance as new problems have emerged and as environmental issues have increasingly intersected with other areas Biodiversity for example was unheard of until the late 1980s negative carbon emissions only came into being over the last few years After a review of concepts and their use in environmental argument chapters chart the trajectories of a range of environmental concepts environment

sustainable development biodiversity environmental assessment critical loads adaptive management green economy environmental risk environmental security environmental justice and sustainable consumption The book provides a valuable resource for scholars and policy makers and also offers a novel introduction to the environmental policy field through the evolution of its conceptual categories Contributors Richard N L Andrews Karin B ckstrand Karen Baehler Daniel J Fiorino Yrj Haila Michael E Kraft Oluf Langhelle Judith A Layzer James Meadowcroft Alexis Schulman Johannes Strippel Philip J Vergragt

The New Environmental Regulation Daniel J. Fiorino, 2006 Winner 2007 Louis Brownlow Award presented by the National Academy of Public Administration NAPA and 2006 Best Book in Environmental Management and Policy American Society for Public Administration

Environmental regulation in the United States has succeeded to a certain extent in solving the problems it was designed to address air water and land are indisputably cleaner and in better condition than they would be without the environmental controls put in place since 1970 But Daniel Fiorino argues in *The New Environmental Regulation* that given recent environmental economic and social changes it is time for a new more effective model of environmental problem solving Fiorino provides a comprehensive but concise overview of U S environmental regulation its history its rationale and its application and offers recommendations for a more collaborative flexible and performance based alternative Traditional environmental regulation was based on the increasingly outdated assumption that environmental protection and business are irreversibly at odds The new environmental regulation Fiorino describes is based on performance rather than on a narrow definition of compliance and uses such policy instruments as market incentives and performance measurement It takes into consideration differences in the willingness and capabilities of different firms to meet their environmental obligations and it encourages innovation by allowing regulated industries especially the better performers more flexibility in how they achieve environmental goals Fiorino points to specific programs including the 33 50 Program innovative permitting and the use of covenants as environmental policy instruments in the Netherlands that have successfully pioneered these new strategies By bringing together such a wide range of research and real world examples Fiorino has created an invaluable resource for practitioners and scholars and an engaging text for environmental policy courses

Business and Environmental Policy Michael E. Kraft, Sheldon Kamieniecki, 2007 It is well known that American businesses make an effort to influence environmental policy by attempting to set the political agenda and to influence regulations and legislation This book examines what is not so well known the extent to which business succeeds in its policy interventions In Business and Environmental Policy a team of distinguished scholars systematically analyzes corporate influence at all stages of the policy process focusing on the factors that determine the success or failure of business lobbying in Congress state legislatures local governments federal and state agencies and the courts These experts consider whether business influence is effectively counterbalanced by the efforts of environmental groups public opinion and other forces The book also examines the use of the media to influence public opinion as in the battle over drilling in the Arctic National Wildlife Refuge and corporations efforts to sway elections by making campaign contributions Because the book goes well beyond the existing literature much of which is narrow descriptive and anecdotal to provide broad based empirical evidence of corporate influence on environmental policy it makes an original and important contribution and is appropriate for a variety of undergraduate and graduate courses

State and Environment Andreas Duit, 2014-06-06 Studies of environmental governance that show the relevance of the state's role in environmental politics and the analytical power of the comparative approach Many recent studies on environmental governance focus on either the micro level the local and the individual or the macro level the global while neglecting

governance at the nation state level State environmental governance is often perceived as inadequate insufficient or constrained by considerations of economic growth And yet the impact of state environmental governance dwarfs that of the market or international organizations This book of comparative studies documents the continuing relevance of the state in environmental politics and policy The book also demonstrates the analytical power of the comparative approach to the study of environmental politics and policy offering cross national comparisons of environmental governance in both developed and developing countries Some chapters are based on qualitative studies from a small number of countries others offer statistical analyses of quantitative data from many more countries over a longer time period Topics discussed include alternative approaches to estimating comparative environmental performance citizens shifting perceptions of their environmental responsibilities U S and German wind policies fisheries management in several African countries and forestry conservation in Bolivia Guatemala and Peru The studies illuminate such key issues as the effect of different political systems on the evolution of environmental policy regimes why some countries seem to perform better than others in environmental matters and the sociopolitical context of resource management
