

# THE SEVEN ENVIRONMENTAL PRINCIPLES

ADAPTED FROM BARRY COMMONER, AS COMPILED BY MIRIAM COLLEGE

## 1. NATURE KNOWS BEST.

This principle is the most basic and in fact encompasses all the others.

Humans have to understand nature and have to abide by the rules nature dictates. In essence, one must not go against the natural process if one would like to ensure a continuous and steady supply of resources.

## 2. ALL FORMS OF LIFE ARE IMPORTANT.

Each organism plays a fundamental role in nature. Since such occupational or functional position, otherwise known as niche, cannot be simultaneously occupied by more than one specie, it is apparent that all living things must be considered as invaluable in the maintenance of homeostasis in the ecosystem.

## 3. EVERYTHING IS CONNECTED TO EVERYTHING ELSE.

This principle is best exemplified by the concept of the ecosystem. In an ecosystem, all biotic and abiotic components interact with each other to ensure that the system is perpetuated. Any outside interference may result in an imbalance and the deterioration of the system.

## 4. EVERYTHING CHANGES.

It is said that the only permanent thing is change.

The environment is constantly changing. Organisms also evolve through time. However, human technology has affected these natural changes often to a problematic extent.

Environmental technologies should be given priority if humans would want more positive changes in the environment.

## 5. EVERYTHING MUST GO SOMEWHERE.

When a piece of paper is thrown away, it disappears from sight but it does not cease to exist. It ends up elsewhere. What a particular type of waste does to the earth's repository should be of concern to us. Since wastes are not lost to oblivion, and even goes back to one's own backyard in some other forms, it is important that one becomes aware of the different types of wastes – whether they are hazardous or not.

## 6. OURS IS A FINITE EARTH.

Awareness of the earth's limited resources leads to a conscious effort to change one's consumerist attitude as well as to develop processes and technology that would bring about effective recycling of a great number of resources.

It is essential to know how much of a resource can be consumed at a given time to balance the rate of exploitation with the rate of replenishment.

## 7. NATURE IS BEAUTIFUL AND WE ARE STEWARDS OF GOD'S CREATION.

Among all creatures, humans are the only ones made in God's image and have been given the right to have dominion over all His creations. Being the most intelligent and gifted with no reason, humans are capable of manipulating creation to their own advantage. Yet, creation exists not to be ravaged or abused but to be taken care of. Humans cannot exist without nature. They are co-natural with the environment they live in.
