Open Source SOA Jeff Davis, 2009-04-30 You can build a world class SOA infrastructure entirely using popular and mature open source applications Unfortunately the technical documentation for most open source projects focuses on a specific product the big SOA picture You're left to your own devices to figure out how to cobble together a full solution from the various bits In other words unless you already know how Mule and Tuscany work with jBPM you're stuck

Open Source SOA shows readers how to build an entire SOA application using open source technologies It shows readers how to apply key ideas like Enterprise Service Bus ESB design and Business Process Management BPM and learn the tools and techniques to implement them effectively To pull everything together the author describes real life case studies from his own work to tie together all the principles and practices These hard to find case studies are pure gold for the reader as most developers keep these trade secrets to themselves Purchase of the print book comes with an offer of a free PDF ePub and Kindle eBook from Manning Also available is all code from the book
