

CHAPTER 8

Water-Wise Gardening Tips

Water-wise gardening can reduce water demand and improve growth and yield of crops, the beauty of flowers and shrubs, and the health of the soil and landscape. Most of us are using much more water than we need, and we can all make dramatic changes in our gardens, yards, or farms that will make a difference. Cutting water use 50 percent can be relatively easy, but it's possible to go much farther. You may find your savings increase each year as you develop your skills and understanding of super-efficient irrigation and water-wise gardening. Many agriculture extension groups, garden associations, water agencies, and sustainable farming groups offer classes or online materials. Some cities and states are now offering financial incentives as well.

Keep in mind that gardening is also about climate and microclimate. What works in the low desert around Yuma, Arizona, may not work as well in Las Vegas, Santa Fe, or Atlanta. Read with a careful eye and look for specific information for where you live. Learn from your neighbors, and take classes offered by local experts. Even if they are not familiar with super-efficient irrigation systems, they should be able to help with advice on soils, composting, crop varieties, planting, pest control, and crop timing.

Here are some water-wise gardening tips to get you started.

1. Give priority to the native plants from your region that are drought resistant, drought tolerant, or drought avoiding. The growing interest in xeriscaping, a water-efficient landscaping method developed for arid climates, has made it much easier to find plants that will do well with very little water. Succulents often offer the best flowers for the least water. Your local garden center or nursery can help with advice and will usually sell varieties that do well

Native plants are the way to attractive, water-wise landscaping.

in your area, but don't restrict yourself to the handful of choices they offer. Search out the native plant nurseries and specialty growers who work with heirloom and exotic varieties. Look through the catalogs and websites of other companies that offer special heirloom and international varieties. Ask about locally developed and adapted species and cultivars. Whenever locally adapted varieties are available, try heirloom cultivars from comparable climates. Ask your neighbors, your cooperative extension agent, and garden clubs what works for them and tastes best. Visit farmers' markets and see what is being grown and sold.

2. Choose varieties that are dryland adapted. Many of these heirloom varieties have been selected over generations to do well with less water. Some, such as Hesper-corn,

Dwarf trees can be very productive in containers, and water use can be reduced with olive, citrus, capote, or the Hesper-corn.

have adapted with very dense, fast-growing roots. Also, crops and flowers that can be started indoors early in the season and then planted in the garden in very early spring will complete their life cycle by the time it gets really hot and dry. Trees that are very drought resistant include olives, pomegranates, loquat, mulberries, carobs, and mesquite. Dwarf-type trees can also reduce water use and will do well in pots or containers. These can be surprisingly productive. Our Meyer lemon shrubs out delicious lemons all year long in San Diego!

3. Replace your lawn with water-conserving native plants.
