**Free Innovation** Eric Von Hippel, 2024-04-30 A leading innovation scholar explains the growing phenomenon and impact of free innovation in which innovations developed by consumers and given away for free In this book Eric von Hippel author of the influential Democratizing Innovation integrates new theory and research findings into the framework of a free innovation paradigm Free innovation as he defines it involves innovations developed by consumers who are self rewarded for their efforts and who give their designs away for free It is an inherently simple grassroots innovation process unencumbered by compensated transactions and intellectual property rights Free innovation is already widespread in national economies and is steadily increasing in both scale and scope Today tens of millions of consumers are collectively spending tens of billions of dollars annually on innovation development However because free innovations are developed during consumers unpaid discretionary time and are given away rather than sold their collective impact and value have until very recently been hidden from view This has caused researchers governments and firms to focus too much on the Schumpeterian idea of innovation as a producer dominated activity Free innovation has both advantages and drawbacks Because free innovators are self rewarded by such factors as personal utility learning and fun they often pioneer new areas before producers see commercial potential At the same time because they give away their innovations free innovators generally have very little incentive to invest in diffusing what they create which reduces the social value of their efforts The best solution von Hippel and his colleagues argue is a division of labor between free innovators and producers enabling each to do what they do best The result will be both increased producer profits and increased social welfare a gain for all

To Save Everything, Click Here Evgeny Morozov, 2013-03-05 A New York Times Notable Book of the Year In the very near future smart technologies and big data will allow us to make large scale and sophisticated interventions in politics culture and everyday life Technology will allow us to solve problems in highly original ways and create new incentives to get more people to do the right thing But how will such solutionism affect our society once deeply political moral and irresolvable dilemmas are recast as uncontroversial and easily manageable matters of technological efficiency What if some such problems are simply vices in disguise What if some friction in communication is productive and some hypocrisy in politics necessary The temptation of the digital age is to fix everything from crime to corruption to pollution to obesity by digitally quantifying tracking or gamifying behavior But when we change the motivations for our moral ethical and civic behavior we may also change the very nature of that behavior Technology Evgeny Morozov proposes can be a force for improvement but only if we keep solutionism in check and learn to appreciate the imperfections of liberal democracy Some of those imperfections are not accidental but by design Arguing that we badly need a new post Internet way to debate the moral consequences of digital technologies To Save Everything Click Here warns against a world of seamless efficiency where

everyone is forced to wear Silicon Valley's digital straitjacket      **Diversity in Intellectual Property** Irene Calboli, Srividhya Ragavan, 2015-05-28 Leading scholars address the interface between intellectual property and diversity with respect to culture, religion, race, and gender      *IT Strategy for Non-IT Managers* Amrit Tiwana, 2017-09-15 How non-IT managers can turn IT from an expensive liability into a cost-effective competitive tool. Firms spend more on information technology (IT) than on all other capital assets combined. And yet despite this significant cash outlay, businesses often end up with IT that is uneconomical and strategically feeble. What is missing in many organizations' IT strategy is the business acumen of managers from non-IT departments. This book presents tools for non-IT managers to turn IT from an expensive liability into a cost-effective competitive tool. It equips readers with the concepts and analytical skills necessary to understand IT needs and opportunities from both sides of the business-IT divide. Each chapter opens with a jargon decoder, nontechnical explanations of the key ideas in the chapter, and ends with a checklist summarizing non-IT factors to consider in IT decisions. Chapters cover such topics as infusing competitive firepower into IT strategy, amalgamating software and data for a hard-to-duplicate competitive advantage, making choices that meet today's business needs without handicapping future strategy, establishing who decides what about IT strategies, sourcing IT and its challenges, protecting IT assets against disaster in ways that IT professionals cannot, and recognizing the business potential of emerging technologies. Examples are drawn from large corporations, small businesses, and nonprofits around the world. The book is suitable for use in the MBA core IT course and is aimed especially at students in professional or executive MBA programs. It will also be a valuable reference for managers.

**More Than A Pretty Face** Joel Oesch, 2017-07-18 The online social network phenomenon has forever changed the way we think about ourselves in relation to our neighbors. But do these massively popular networks actually build community? *More Than a Pretty Face* invites us to consider the present and future challenges of the Digital Age and offers resources from Lutheran theology, notably from Dietrich Bonhoeffer, that call into question many of the assumptions that support a disembodied understanding of community. What remains is a genuine call for a vibrant theology of embodiment. By recognizing the distinctive features of physical communities, Christians can discern which digital social technologies embrace a view of humanity that necessarily includes the body. There is no need for either the polar extremes of neo-Luddism or the uncritical embrace of all things digital. Rather, Christians are called to respond to needs of the community with empathy, intimacy, and physicality.      *Hey, Whipple, Squeeze This* Luke Sullivan, 2016-01-19 The classic guide to creating great advertising now covers all media: Digital, Social, and Traditional. *Hey, Whipple, Squeeze This* has helped generations of young creatives make their mark in the field. *Shooting a Revolution* Donatella Della Ratta, 2018-11-20 From ISIS propaganda videos to popular regime backed TV series and digital activism the Syrian conflict has been dramatically affected by the production of media at the same time generating in its turn an impressive visual culture Yet what are the aesthetic political and material implications of the collusion between the production of this sheer amount of visual media being continuously shared and re manipulated on the Internet and the performance of the conflict on the ground This ethnography uses the Syrian case to reflect more broadly on how the networked age reshapes contemporary warfare and impacts on the enactment of violence through images and on images In stark contrast to the techno utopias celebrating digital democracy and participatory cultures Donatella Della Ratta's analysis exposes the dark side of online practices where visual regimes of representation and media production dramatically intertwine with modes of destruction and the performance of violence Exploring the most socially mediated conflict of contemporary times the book offers a fascinating insight into the transformation of warfare and life in the age of the internet

**Politics Recoded** Aure Schrock, 2024-09-24 The first detailed history of Code for America that examines how democratically designed government systems can collectively improve technology's impact on society For decades tens of thousands of volunteers and employees of Code for America have taken a different path to institutional

change through designing and implementing infrastructure In *Politics Recoded* Aure Schrock employs a robust organizational ethnography to analyze how Code for America's infrastructural organizing changed how politics get exercised showing how we citizens can work directly with the government on projects to improve our collective livelihoods Drawing from theories of organizing social infrastructure racialized organizations technical cultures and intersectionality Schrock argues that our post techlash society must no longer presume that corporate platforms or social networks can level social inequities An underrecognized yet influential organization Code for America emerged from a tech culture background that prioritized networks and publicity over the long slow work of institutional change But its evolution demonstrates how to push beyond the fundamental flaws of tech forward organizing This the first history of Code for America shows how promoting agentic citizenship and brokering in empathy let the organization influence policy at all levels of government and demonstrates why we need to bolster institutions to ensure that everyone is justly represented and receiving the benefits Appealing to those in political science communication and information studies *Politics Recoded* will empower practitioners and activists to revolutionize technological design and participate in alternative forms of civic engagement

**Disconnected** Carrie James, 2016-09-02 How young people think about the moral and ethical dilemmas they encounter when they share and use online content and participate in online communities Fresh from a party a teen posts a photo on Facebook of a friend drinking a beer A college student repurposes an article from Wikipedia for a paper A group of players in a multiplayer online game routinely cheat new players by selling them worthless virtual accessories for high prices In *Disconnected* Carrie James examines how young people and the adults in their lives think about these sorts of online dilemmas describing ethical blind spots and disconnects Drawing on extensive interviews with young people between the ages of 10 and 25 James describes the nature of their thinking about privacy property and participation online She identifies three ways that young people approach online activities A teen might practice self focused thinking concerned mostly about consequences for herself moral thinking concerned about the consequences for people he knows or ethical thinking concerned about unknown individuals and larger communities James finds among other things that youth are often blind to moral or ethical concerns about privacy that

attitudes toward property range from what s theirs is theirs to free for all that hostile speech can be met with a belief that online content is just a joke and that adults who are consulted about such dilemmas often emphasize personal safety issues over online ethics and citizenship Considering ways to address the digital ethics gap James offers a vision of conscientious connectivity which involves ethical thinking skills but perhaps more important is marked by sensitivity to the dilemmas posed by online life a motivation to wrestle with them and a sense of moral agency that supports socially positive online actions
