Psychosocial Interventions for Psychosis Alan Meaden, Andrew Fox, 2015-03-24 Despite the steady acceptance of psychological interventions for people with psychosis in routine practice many people continue to experience problems in their recovery The need to develop new approaches particularly for those who are more difficult to engage and have significant co morbidities is therefore important Innovations in Psychosocial Interventions for Psychosis positions psychological formulation as a key organising principle for the delivery of care within multidisciplinary teams The interventions described all have the common theme of supporting recovery and achieving goals that are of primary importance to the service user which targets interventions on broader obstacles to recovery Along with their experienced contributors Alan Meaden and Andrew Fox introduce new developments in psychological interventions for people affected by psychosis who are hard to reach working in a variety of settings with people at various stages of recovery The book is divided into three parts In part one brief interventions and approaches aimed at promoting engagement are described as interventions in their own right Part two is focused on longer term interventions with individuals Some of these highlight new developments in the evidence base whilst others draw on work applied less frequently to psychosis drawing from the broader psychological therapy practice based evidence field In part three attention is given to innovations in group settings and those aimed at promoting greater multidisciplinary working in settings where a whole team approach is needed Each chapter describes the theory underpinning a different approach its development key strategies principles and stages and contain case examples that illustrate the use of the approach in a clinical setting Innovations in Psychosocial Interventions for Psychosis will be an invaluable resource to professionals working with this client group including clinical and counselling psychologists psychiatrists and other allied health professionals **Psychological Interventions for Psychosis** Juan Antonio

Díaz-Garrido, Raquel Zúñiga, Horus Laffite, Eric Morris, 2023-05-27 This book shows how psychological and social interventions can help people with psychosis It brings together both theoretical chapters that contribute to the reconceptualization of psychosis and clinical cases illustrating how contemporary psychotherapeutic intervention models can be applied in the treatment of this mental health condition with reflections strategies and practical guidelines demonstrating

how these models can inform professional practice in mental healthcare Chapters brought together in this volume aim to reflect a paradigm shift in psychosis care They present person centered models that lead to a way of seeing understanding and treating psychosis that is very different from the traditional biomedical model Current authors and approaches are revolutionizing an outdated model trapped in purely pharmacological actions and tautological explanations of a biological nature where symptom control is the basic and fundamental form of approach and in which psychotherapeutic actions take second place as subsidiary to the former Approaches such as Acceptance and Commitment Therapy Acceptance and Recovery Therapy by Levels Open Dialogue Compassion Centered Therapy or the Hearing Voices movement to name but a few of those presented in this book represent a journey of self knowledge and learning for those recovering from psychosis and have an intense transformative potential for the therapeutic team The fundamental principle that guides this book is to share models belonging to psychology that aim at personal development while respecting the needs values and goals of each person and that can be adopted by any professional or student of clinical psychology psychiatry nursing social work or any other discipline searching for more humanistic approaches to treat psychosis

The Competency Restoration Handbook Laura M. Grossi, 2025-09-12 This handbook is a collection of foundational materials for competency restoration providers who work with adult pretrial defendants in the U S We first describe the legal context related to adjudicative competence and provide an overview of foundational competency restoration practices We expand upon these foundational resources by explaining how various clinical interventions can be adapted to help restore individuals to competency We attempt to explain and model a holistic multidisciplinary interdisciplinary and culturally conscious approach to restoration Covering empirically informed theoretical and creative approaches that can be individualized for each specific defendant we aim to encourage and facilitate best practices in competency restoration The reader is encouraged to adopt the

interventions illustrated within the scope of their professional competencies to address defendant specific barriers to adjudicative competence Unfortunately there is still very little outcome research on the utility of incorporating these and other clinical approaches in competency restoration Competency restoration providers are encouraged to consider adapting other treatment modalities not mentioned in this handbook i e particularly those which are empirically supported or newly developed for clinical use to facilitate competency restoration Provided by publisher

Trauma, Psychosis, and Posttraumatic Stress Disorder Kate V. Hardy,Kim T. Mueser,2017-12-21 There is abundant evidence showing a strong association between trauma exposure psychotic symptoms and posttraumatic stress disorder PTSD Early trauma exposure contributes to the formation of psychotic symptoms and the development of psychotic disorders or severe mental illnesses such as schizophrenia bipolar disorder and treatment refractory major depression Furthermore among persons with psychotic disorders multiple traumatization over the lifetime is common due to factors such as social stigma the criminalization of severe mental illness and increased vulnerability to interpersonal victimization In addition to these factors is the traumatic nature of experiencing psychotic symptoms and coercive treatments such as involuntary hospitalization and being placed in seclusion or restraints Not surprisingly these high rates of trauma lead to high rates of PTSD in people with psychotic disorders which are associated with more severe symptoms worse functioning and greater use of acute care services In addition to the impact of trauma on the development of psychotic disorders and comorbid PTSD traumatic experiences such as childhood sexual and physical abuse can shape the nature of prominent psychotic symptoms such as the content of auditory hallucinations and delusional beliefs Additionally traumatic experiences have been implicated in the role of stress responsivity and increased risk for transition to psychosis in those identified as being at clinical high risk of developing psychosis Finally although the diagnostic criteria for PTSD primarily emphasize the effects of trauma on anxiety avoidance physiological over arousal and negative thoughts it is well established that PTSD is frequently accompanied by psychotic symptoms such as hallucinations and delusions that cannot be attributed to another DSM V Axis I disorder such as psychotic depression or schizophrenia Understanding the contribution of traumatic experiences to the etiology of psychosis and other symptoms can inform the provision of cognitive behavioral therapy for psychosis including the development of a shared formulation of the events leading up to the onset of the disorder as well as other trauma informed treatments that address distressing and disabling symptoms associated with trauma and psychosis Until recently the trauma treatment needs of this population have been neglected despite the high rates of trauma and PTSD in persons with psychotic disorders and in

spite of substantial gains made in the treatment of PTSD in the general population Fortunately progress in recent years has provided encouraging evidence that PTSD can be effectively treated in people with psychotic disorders using interventions adapted from PTSD treatments developed for the general population In contrast to clinician fears about the untoward effects of trauma focused treatments on persons with a psychotic disorder research indicates that post traumatic disorders can be safely treated and that participants frequently experience symptom relief and improved functioning There is a need to develop a better understanding of the interface between trauma psychosis and post traumatic disorder This Frontiers Research Topic is devoted to research addressing this interface
