Rusnock, 2020-01-29 James Jurin 1684 1750 occupied a central place in the medical and scientific circles of Augustan and Georgian England His dispassionate yet forceful advocacy of smallpox inoculation using an innovative statistical approach brought him widespread recognition both in Britain and abroad He was Secretary to the Royal Society for seven years and participated vigorously in the most important scientific debates of the period Jurin's correspondence recently made available to the public provides rich material for the study of eighteenth century natural philosophy and medicine especially of the smallpox inoculation debates This volume reproduces a broad and valuable selection of letters as well as a list of Jurin's publications and a calendar of the complete correspondence The introductory biographical essay describes how Jurin combined a career as a successful London physician with that of a natural philosopher *The Cambridge Companion to the Scottish Enlightenment* Alexander Broadie, Craig Smith, 2019-09-26 The second edition of this Companion presents a philosophical perspective on an eighteenth century phenomenon that has had a profound influence on Western culture A distinguished team of contributors examines the writings of David Hume Adam Smith Thomas Reid Adam Ferguson and other Scottish thinkers Their subjects range across philosophy natural theology economics anthropology natural science and law and the arts and in addition they relate the Scottish Enlightenment to its historical context and assess its impact and legacy The result is a comprehensive and accessible volume that illuminates the richness the intellectual variety and the underlying unity of this important movement This volume contains five entirely new chapters on morality the human mind aesthetics sentimentalism and political economy and eleven other chapters have been significantly revised and updated The book will be of interest to a wide range of readers in philosophy theology literature and the history of ideas **Academic Patronage in the Scottish Enlightenment** Roger L. Emerson, 2008-04-29 This book considers the politics of patronage appointments at the universities in Glasgow Edinburgh and St Andrews exploring the ways in which 388 men secured posts in three Scottish universities between 1690 and 1806 Most professors were political appointees vetted and supported by political factions and their leaders This comprehensive study explores the improving agenda of political

patrons and of those they served and relates this to the Scottish Enlightenment Emerson argues that what was happening in Scotland was also occurring in other parts of Europe where in relatively autonomous localities elite patrons also shaped things as they wished them to be The role of patronage in the Enlightenment is essential to any understanding of its origins and course

Essays on David Hume, Medical Men and the Scottish Enlightenment Roger L. Emerson, 2016-05-13 The Scottish Enlightenment was a period of intellectual and scientific progress in a country previously considered to be marginal to the European intellectual scene Yet the enlightenment was not about politeness or civic humanism but something more basic the making of an improved society which could compete in every way in a rapidly changing world David Hume writing in 1752 commented that industry knowledge and humanity are linked together by an indissoluble chain Collectively this volume of essays embraces many of the topics which Hume included under industry knowledge and humanity from the European Enlightenment and the Scots relation to it to Scottish social history and its relation to religion science and medicine Overarching themes of what it meant to be enlightened in the eighteenth century are considered alongside more specific studies of notable figures of the period such as Archibald Campbell 3rd Duke of Argyll and David Hume and the training and number of Scottish medical students Together the volume provides an opportunity to step back and reconsider the Scottish Enlightenment in its broader context and to consider what new directions this field of study might take

Cavendish

Christa Jungnickel, Russell McCormmach, 1999 The Cavendishes flourished during the high tide of British aristocracy following the revolution of 1688 89 and the case can be made that this aristocracy knew its finest hour when Henry Cavendish gently laid his delicate weights in the pan of his incomparable precision balance For this it took two generations and two kinds of invention one in social forms and the other in scientific technique This biography tells how it came to pass

BOOK JACKET Thomas Reid on Mathematics and Natural Philosophy Thomas Reid, 2017-07-28 Reconstructs Reid's career as a mathematician and natural philosopher for the first time Literature After Euclid Matthew Wickman, 2016-02-16 Literature After Euclid tells the story of the creative adaptation of geometry in Scotland during and after the long eighteenth century Analyzing the work of Scottish literati Matthew Wickman challenges how we perceive the Scottish Enlightenment and the modernist ethos that relegated classical Enlightenment to the dustbin of history **Nation and Province in the First British Empire** Eighteenth-Century Scottish Studies Society, John Carter Brown Library, 2001 For more than four decades historians have devoted ever increasing attention to the affinities that linked Scotland with the American colonies in the eighteenth century This volume moves beyond earlier discussions in two ways For one the geographical coverage of the papers extends beyond the territories that became the United States to include what became Canada The Caribbean and even Africa For another the volume attends not only those areas in which Scotland was closely linked to the Americas but also to those where it was not **Capital of the Mind** James Buchan, 2012-11-01 This elegant portrait of Edinburgh in the age of Enlightenment reveals a thriving city of artists architects scientists and other pioneers Times Literary Supplement In the early eighteenth century Edinburgh Scotland was a filthy backwater town synonymous with poverty and disease Yet by century's end it had become the marvel of modern Europe home to the finest minds of the day and their breathtaking innovations in architecture politics science the arts and economics all of which continues to echo loudly today Adam Smith penned The Wealth of Nations James Boswell produced The Life of Samuel Johnson Alongside them pioneers such as David Hume Robert Burns James Hutton and Sir Walter Scott transformed the way we understand our perceptions and feelings sickness and health relations between the sexes the natural world and the purpose of existence In Capital of the Mind James Buchan beautifully reconstructs the intimate geographic scale and boundless intellectual milieu of Enlightenment Edinburgh With the scholarship of a historian and the elegance of a novelist he tells the story of the triumph of this unlikely town and those whose vision brought it into being As Buchan says in this marvelous book there is no city like Edinburgh in all the world Sunday Times **The Rise and Fall of the City of Money** Ray Perman, 2019-10-10 It started and ended with a financial catastrophe The Darien disaster of 1700 drove Scotland into union with England but spawned the institutions which transformed Edinburgh into a global financial centre The crash of 2008 wrecked the city's two largest and oldest banks and its reputation In the three intervening centuries Edinburgh became a hothouse of financial innovation prudent banking reliable insurance and smart investing The face of the city changed too as money transformed it from

medieval squalor to Georgian elegance This is the story not just of the institutions which were respected worldwide but of the personalities too such as the two hard drinking Presbyterian ministers who founded the first actuarially based pension fund Sir Walter Scott who faced financial ruin but wrote his way out of it the men who financed American railways and eastern rubber plantations with Scottish money and Fred Goodwin notorious CEO of RBS who took the bank to be the biggest in the world but crashed and burned in 2008 **The Problem of the Earth's Shape from Newton to Clairaut** John L.

Greenberg,1995-07-28 This book investigates through the problem of the earth's shape part of the development of post Newtonian mechanics by the Parisian scientific community during the first half of the eighteenth century In the Principia Newton first raised the question of the earth's shape John Greenberg shows how continental scholars outside France influenced efforts in Paris to solve the problem and he also demonstrates that Parisian scholars including Bouguer and Fontaine did work that Alexis Claude Clairaut used in developing his mature theory of the earth's shape The evolution of Parisian mechanics proved not to be the replacement of a Cartesian paradigm by a Newtonian one a replacement that might be expected from Thomas Kuhn's formulations about scientific revolutions but a complex process instead involving many areas of research and contributions of different kinds from the entire scientific world Greenberg both explores the myriad of technical problems that underlie the historical development of part of post Newtonian mechanics which have only been rarely analyzed by Western scholars and embeds his technical discussion in a framework that involves social and institutional history politics and biography Instead of focusing exclusively on the historiographical problem Greenberg shows as well that international scientific communication was as much a vital part of the scientific progress of individual nations during the first half of the eighteenth century as it is today **Leases for Lives** David R. Bellhouse,2017-07-14 Many historians of

insurance have commented on the disconnect between the rise of English life insurance companies in the early eighteenth century and the mathematics behind the sound pricing of life insurance products that was developed at about the same time Insurance and annuity promoters typically ignored this mathematical work Bellhouse explores this issue and shows that the early mathematical work was not motivated by insurance but instead by the fair valuation of life contingent contracts related to property Even the work of the mathematician James Dodson in the creation of the Equitable Life Assurance Society offering sound actuarially based premiums did not change the industry in any significant way The tipping point was a crisis in 1770 in which the philosopher and mathematician Richard Price as well as other mathematicians showed that a dozen or more recently formed annuity societies could not meet their financial obligations and were inviable [A Concise History of](#)
