Adams, James H.

Adams, 2018-10-09 After the 1954 Brown v Board of Education ruling no state fought longer or harder to preserve segregated schools than Mississippi This massive resistance came to a crashing halt in October 1969 when the Supreme Court ruled in Alexander v Holmes Board of Education that the obligation of every school district is to terminate dual school systems at once and to operate now and hereafter only unitary schools Thirty of the thirty three Mississippi districts named in the case were ordered to open as desegregated schools after Christmas break With little guidance from state officials and no formal training or experience in effective school desegregation processes ordinary people were thrown into extraordinary circumstances However their stories have been largely ignored in desegregation literature Based on meticulous archival research and oral history interviews with over one hundred parents teachers students principals superintendents community leaders and school board members Natalie G Adams and James H Adams explore the arduous and complex task of implementing school desegregation How were bus routes determined Who lost their position as principal Who was assigned to what classes Without losing sight of the important macro forces in precipitating social change the authors shift attention

to how the daily work of just trying to have school helped shape the contours of school desegregation in communities still living with the decisions made fifty years ago

*Advances in Conservation and Use of Potato Genetic Resources* Iris Edith Peralta, Alfonso H. Del Rio, Gustavo Heiden, Dave Ellis, Peter Giovannini, 2024-11-22 The potato is the world's most important non-cereal food with a global production of 370 million tonnes. The cultivated potato *Solanum tuberosum* L. AABB 2n 4x 48 genome size 844 Mb belongs to *Solanum* section *Petota* and was domesticated in the South American Andes about 8 000 to 10 000 years ago. The *Petota* section is characterized by a broad genetic diversity involving introgressions, interspecific hybridization events, auto- and allopolyploidy and a high degree of morphological similarities. Overall 7 cultivated and 228 wild species Hawkes 1990 or 4 cultivated and 107 wild species Spooner et al 2014 were described and are conserved through 82 000 accessions in 89 institutions. Depending on the genetic material, clonal plants are preserved in field genebanks and/or in vitro slow growth storage and/or cryopreservation or as seeds in cold storage facilities. However, challenges for efficient identification of collection gaps, conservation and usage of potato genetic resources in potato breeding programs are the differences in taxonomic classification, the limited information and advances in characterization, evaluation, sequencing and conservation approaches. The aim of this research topic is to highlight the latest developments and strategies in the conservation and use of potato genetic resources. It addresses different scientific fields: i.e. plant physiology, genetics, functional genomics, phenomics, taxonomy, computer modeling and database management
