Neef,2012-07-03 Plant palaeoecologists use data from plant fossils and plant subfossils to reconstruct ecosystems of the past This book deals with the study of subfossil plant material retrieved from archaeological excavations and cores dated to the Late Glacial and Holocene One of the main objectives of this book is to describe the processes that underlie the formation of the archaeobotanical archive and the ultimate composition of the archaeobotanical records being the data that are sampled and identified from this immense archive Our understanding of these processes benefits from a knowledge of plant ecology and traditional agricultural practices and food processing This handbook summarizes the basic ecological principles that relate to the reconstruction of former vegetations and of agricultural practices in particular We hope this book will help palaeobotanists environmental archaeologists and colleagues from related disciplines optimize inferences based on what we could term old style archaeobotany And we hope that our observations will serve as an eye opener and improve future research not only as it is practised in our laboratories but also as it is practised in the field **Agricultural Research** ,2008 Emerging Infectious Diseases ,2009 **Focus** ,2007 *Journal of Research of the National Institute of Standards and Technology* ,1990 Reports NIST research and development in the physical and engineering sciences in which the Institute is active These include physics chemistry engineering mathematics and computer sciences Emphasis on measurement methodology and the basic technology underlying standardization **Tracing Technologies** Helena Machado,Barbara Prainsack,2016-02-24 The real heroes of television crime shows in the twenty first century are no longer police detectives but forensic technologies The immense popularity of high tech crime television shows has changed the way in which crime scene work is viewed The term CSI effect was coined to signify a situation where people s views and practices have been influenced by such media representations e g judges and jurors putting more weight on forensic evidence that has been produced with high tech tools in particular DNA evidence than on other kinds of evidence While considerable scholarly attention has been paid to examining the CSI effect on publics jurors judges and police investigators prisoners views on forensic technologies and policing have been under explored Drawing on a research sample of over 50 interviews carried out with prisoners in Portugal and Austria this groundbreaking book shows how prisoners view crime scene traces how they understand crime scene technologies and what effect they attribute to the existence of large police databases on their own lives careers and futures Through critically engaging with STS sociological and criminological perspectives on the use of DNA technologies within the criminal justice system this work provides the reader with valuable insights into the effect of different legal political discursive and historical configurations on how crime scene technologies are utilized by the police and related to by convicted offenders **Electrophoretic and Isoelectric Focusing Techniques in Fisheries Management** Donald H. Whitmore,1990-09-24 Probably the most ubiquitous biochemical method used today for examining the genetics of individuals

populations or phylogenetic relationships between taxa is electrophoresis This book has been created to offer a viewpoint regarding current electrophoretic separation methodologies of macromolecules and their major applications to fisheries management The chapters in this book have been selected and organized into three sections to create a carefully blended mixture of methodologies and applications designed to educate the novice as well as stimulate interest in professional researchers currently using electrophoresis for their work The first section includes chapters that discuss the principles that explain the genetic basis of multiple molecular forms of proteins the theory and practice of DNA analyses and the methodology of electrophoretic separation of these macromolecules starch gel electrophoresis as the predominant electrophoretic tool for fisheries genetics and protein isoelectric focusing and DNA analysis The second section describes a variety of applications for electrophoretic techniques The third section presents a discussion and results of experiments conducted by Dennis Powers and his associates regarding the physiological significance of multiple forms of enzymes using the fish *Fundulus heteroclitus* as a model system The book features a catalog of nearly 100 enzyme staining recipes and covers new areas in electrophoretic work such as DNA fingerprinting genetic tags mitochondrial DNA methodologies and genomic manipulation of fish stocks This book will provide a useful reference resource for fisheries biologists at federal state and local levels fisheries researchers at universities and students pursuing degrees involving research in fish genetics
