Frontiers of Science Cameron B. Strang, 2018-06-13 Cameron Strang takes American scientific thought and discoveries away from the learned societies museums and teaching halls of the Northeast and puts the production of knowledge about the natural world in the context of competing empires and an expanding republic in the Gulf South People often dismissed by starched northeasterners as nonintellectuals Indian sages African slaves Spanish officials Irishmen on the make clearers of land and drivers of men were also scientific observers gatherers organizers and reporters Skulls and stems birds and bugs rocks and maps tall tales and fertile hypotheses came from them They collected described and sent the objects that scientists gazed on and interpreted in polite Philadelphia They made knowledge Frontiers of Science offers a new framework for approaching American intellectual history one that transcends political and cultural boundaries and reveals persistence across the colonial and national eras The pursuit of knowledge in the United States did not cohere around democratic politics or the influence of liberty It was as in other empires divided by multiple loyalties and identities organized through contested hierarchies of ethnicity and place and reliant on violence By discovering the lost intellectual history of one region Strang shows us how to recover a continent for science

Max Edelson, 2017-04-24 After the Treaty of Paris ended the Seven Years War in 1763 British America stretched from Hudson Bay to the Florida Keys from the Atlantic coast to the Mississippi River and across new islands in the West Indies To better rule these vast dominions Britain set out to map its new territories with unprecedented rigor and precision Max Edelson's The New Map of Empire pictures the contested geography of the British Atlantic world and offers new explanations of the causes and consequences of Britain's imperial ambitions in the generation before the American Revolution Under orders from King George III to reform the colonies the Board of Trade dispatched surveyors to map far flung frontiers chart coastlines in the Gulf of St Lawrence sound Florida's rivers parcel tropical islands into plantation tracts and mark boundaries with indigenous nations across the continental interior Scaled to military standards of resolution the maps they produced sought to capture the essential attributes of colonial spaces their natural capacities for agriculture navigation and commerce and give British officials the knowledge they needed to take command over colonization from across the Atlantic Britain's vision of imperial control threatened to displace colonists as meaningful agents of empire and diminished what they viewed as their greatest historical accomplishment settling the New World As London's mapmakers published these images of order in breathtaking American atlases Continental and British forces were already engaged in a violent contest over who would control the real spaces they represented Accompanying Edelson's innovative spatial history of British America are online visualizations of more than 250 original maps plans and charts

Mapping Nature across the Americas Kathleen A. Brosnan, James R. Akerman, 2021-10-19 Maps are inherently unnatural Projecting three dimensional realities onto two dimensional surfaces they are abstractions that capture someone's idea of what matters within a particular place they require selections and omissions These very characteristics however give maps their importance for understanding how humans have interacted with the natural world and give historical maps especially the power to provide rich insights into the relationship between humans and nature over time That is just what is achieved in Mapping Nature across the Americas Illustrated throughout the essays in this book argue for greater analysis of historical maps in the field of

environmental history and for greater attention within the field of the history of cartography to the cultural constructions of nature contained within maps This volume thus provides the first in depth and interdisciplinary investigation of the relationship between maps and environmental knowledge in the Americas including for example stories of indigenous cartography in Mexico the allegorical presence of palm trees in maps of Argentina the systemic mapping of US forests and the scientific platting of Canada s remote lands
