**CO2 Adsorbents** Ahad Ghaemi,Zohreh Khoshraftar,Fereshteh Pouresmaeil,2025-09-10 CO2 Adsorbents comprehensively explores the materials and technologies used for adsorbing carbon dioxide It covers materials synthesis characterization adsorption mechanisms applications modeling and potential environmental and industrial impacts to help readers find the best adsorbent for their needs Through its coverage of advanced research and technological developments in the field such as novel adsorbent materials innovative synthesis methods and advancements in scalable production techniques the book aims to contribute to the understanding of CO2 adsorption processes materials and their practical applications in addressing the global challenge of climate change and CO2 emissions reduction Presents an overview of different adsorbent materials used for CO2 capture and the methods of synthesis modification and functionalization to enhance their CO2 adsorption performance Describes characterization techniques used to assess the structural morphological and surface properties of CO2 adsorbents Explores the fundamental mechanisms behind CO2 adsorption of various materials the interactions between CO2 molecules and the adsorbent surface and the kinetics and thermodynamics of CO2 adsorption processes Discusses through real world case studies the applications of CO2 adsorbents in various industries such as natural gas purification carbon capture and storage biogas upgrading and air purification and their potential in mitigating greenhouse gas emissions and addressing environmental concerns Analyzes the environmental impact and feasibility of using CO2 adsorbents in real world scenarios and the challenges and benefits of integrating adsorption technologies into existing industrial processes Provides insights into potential improvements challenges and directions for further research and development Through its practical relevance advanced insights and focus on sustainability and innovation this text serves as a valuable resource for researchers engineers and professionals working in the field of carbon capture and utilization including those in chemical environmental and related engineering disciplines

**Emissions Trading as a Policy Instrument** Marc Gronwald,Beat Hintermann,2015-07-17 Empirical and theoretical perspectives on the first two phases of the European Emissions Trading Scheme the largest cap and trade market established so far Emissions trading schemes figure prominently among policy instruments used to tackle the problem of climate change and the European Union Emissions Trading Scheme EU ETS begun in 2005 is the largest cap and trade market so far established In the EU ETS firms regulated by the scheme are provided with emissions allowances each a one time right to emit one ton of greenhouse gases and can sell their unused allowances to firms that have higher rates of emissions In this volume leading economists offer empirical and theoretical perspectives on the early phases of the EU ETS implementation The contributors discuss the features of the EU ETS market and regulatory uncertainty stemming from rule changes the political economy context of the trading scheme including allowance allocation and the influence of lobbying on abatement decisions the coexistence of such overlapping instruments for climate policy as pricing and taxation the relationship between spot and futures markets for

allowances and firms responses to various features of the EU ETS including fluctuating allowance prices free allocation and links to the Kyoto process They show that although the basic theory behind emissions permit markets is straightforward design features market structure and interactions with other policy instruments can influence the efficiency of the scheme

**Interactions Between China's National Emissions Trading Scheme and Electricity Market: Practices and Policies** Tsun Se Cheong,Xunpeng (Roc) Shi,Yongping Sun,Jian Yu,Xin Yao,2023-11-03 China s national carbon market the world s largest emissions trading scheme ETS kicked off its first online trade recently This can be called a milestone for the country towards the nation s goals of having CO2 emissions peak before 2030 and achieving carbon neutrality by 2060 China s national ETS initially covers the power sector before being expanded to a much broader set of energy intensive industries On one hand the electricity sector the largest carbon emitting industry is responsible for about 40% of China s emissions and it has great significance to response to global climate change On the other hand the effectiveness of China s ETS will rest on how well it is coordinated with power market regulations and policies In this regard the deepening of reform as well as the advanced technology and its applications in the electricity market will add new challenges and opportunities to electricity trade which in turn influences national ETS Therefore this brings urgency to accurately capture the dynamic interactions between national ETS and electricity market to transform carbon trading into a practical and effective way to decarbonize the power sector      **Modeling Decisions for Artificial Intelligence** Yasuo Narukawa,Masahiro Inuiguchi,2009-11-03 This volume contains papers presented at the 6th International Conference on ModelingDecisionsforArti cialIntelligence MDAI2009 heldinAwajiIsland Japan November 30 December 2 2009 This conference followed MDAI 2004 Barcelona
