**Emotion Explained** Edmund T. Rolls, 2005. What produces emotions? Why do we have emotions? How do we have emotions? Why do emotional states feel like something? This book seeks explanations of emotion by considering these questions. Emotion continues to be a topic of enormous scientific interest. This new book, a successor to *The Brain and Emotion* (OUP, 1998), describes the nature, functions and brain mechanisms that underlie both emotion and motivation. *Emotion Explained* goes beyond examining brain mechanisms of emotion by proposing a theory of what emotions are and an evolutionary Darwinian theory of the adaptive value of emotion. It also shows that there is a clear relationship between motivation and emotion. The book also examines how cognitive states can modulate emotions and in turn how emotions can influence cognitive states. It considers the role of sexual selection in the evolution of affective behaviour. It also examines emotion and decision making with links to the burgeoning field of neuroeconomics. The book is also unique in considering emotion at several levels: the neurophysiological, neuroimaging, neuropsychological, behavioural and computational neuroscience levels.
